

## Table of Contents

List of Abbreviations/Acronyms .....	xii
List of Symbols .....	xvi
List of Tables .....	xviii
List of figures.....	xxi
Preface .....	xxvi
Chapter 1: Neurodegenerative disorder: Alzheimer’s disease .....	1
1.1 Neurodegenerative disorders .....	1
1.1.1 Alzheimer’s disease .....	1
1.1.2 Parkinson’s disease .....	2
1.1.3 Amyotrophic lateral sclerosis .....	2
1.1.4 Huntington disease.....	2
1.1.5 Frontotemporal dementia.....	3
1.2 Pathophysiology of Alzheimer’s disease.....	3
1.2.1 Role of amyloid precursor protein .....	4
1.2.2 Role of beta-secretase .....	4
1.2.3 Role of amyloid beta.....	5
1.2.4 Role of monoamine oxidase .....	5
1.2.5 Role of tau-tubulin kinase.....	6
1.2.6 Role of tau.....	6
1.2.7 Acetylcholine .....	6
1.2.8 Role of glutamate.....	7
1.2.9 Role of N-methyl-D-aspartate receptor .....	7
1.2.10 Role of neuropeptides .....	8
1.2.11 Neuroprotective role of estrogens in Alzheimer’s disease .....	8
1.3 Stages of Alzheimer’s disease .....	9
1.3.1 Early stage.....	9
1.3.2 Middle stage.....	11
1.3.3 Late stage .....	11
1.4 Diagnosis of Alzheimer’s disease.....	12
1.4.1 Assessing memory problems and other symptoms.....	12
1.4.2 Laboratory tests.....	12

1.4.3 Brain-imaging tests .....	13
1.5 Treatment of Alzheimer's disease .....	13
1.5.1 Pharmacological treatment .....	13
1.5.2 Non-pharmacological therapy for AD .....	15
1.6 References.....	18
Chapter 2: Identification of matrix metalloproteinase-9 inhibitors	23
2.1 Introduction.....	23
2.2 Materials and Methods.....	25
2.2.1 Computational details .....	25
2.2.2 Energetically optimized structure-based pharmacophore generation .....	26
2.2.3 Enrichment calculations.....	29
2.2.4 Ligand-based pharmacophore generation .....	30
2.2.5 External validation of 3D-QSAR models .....	32
2.2.6 Database preparation.....	32
2.2.7 Pharmacophore-based screening of the database.....	33
2.2.8 Removal of pan-assay interference compounds .....	33
2.2.9 High-throughput virtual screening and molecular docking .....	33
2.2.10 Induced fit docking .....	34
2.2.11 Prime MM-GBSA simulation.....	35
2.2.12 Docking using AutoDock .....	36
2.2.13 Prediction of ADME.....	37
2.2.14 Density functional theory.....	37
2.2.15 <i>In silico</i> MMP-9 selectivity determination .....	38
2.2.16 <i>In vitro</i> MMP-9 enzyme inhibition.....	38
2.2.17 <i>In vitro</i> AChE and BuChE enzyme inhibition.....	39
2.2.18 Assay of propidium iodide displacement.....	40
2.2.19 <i>In vitro</i> blood-brain barrier permeation assay.....	41
2.2.20 Determination of cellular cytotoxicity and neuroprotection.....	42
2.2.21 Molecular dynamics simulation.....	43
2.3 Results and Discussion .....	45
2.3.1 Energetically optimized structure-based pharmacophore generation .....	45
2.3.2 Validation of e-pharmacophore model .....	47
2.3.3 Development of ligand-based pharmacophore model .....	49
2.3.4 Validation of 3D-QSAR models.....	51

2.3.5 Analysis of contour maps .....	53
2.3.6 Pharmacophore-based virtual screening, removal of PAINS and molecular docking.....	55
2.3.7 Induced fit docking .....	56
2.3.8 Determination of Prime MM-GBSA .....	58
2.3.9 AutoDock simulation.....	58
2.3.10 Prediction of ADME properties .....	58
2.3.11 Density functional theory.....	60
2.3.12 Determination of MMP-9 selectivity.....	61
2.3.13 <i>In vitro</i> MMP-9 enzyme inhibition.....	63
2.3.14 <i>In vitro</i> blood-brain barrier permeation assay.....	66
2.3.15 Cytotoxicity and neuroprotection assessment.....	67
2.3.16 Molecular dynamics simulation.....	69
2.4 Conclusions.....	70
2.5 References.....	73
Chapter 3: Discovery of PAS selective acetylcholinesterase inhibitors	83
3.1 Introduction.....	83
3.2 Materials and Methods.....	85
3.2.1 Computational details .....	85
3.2.2 Development of ligand-based pharmacophore .....	86
3.2.3 Validation of ligand-based pharmacophore .....	86
3.2.4 Energy-optimized structure-based pharmacophore generation .....	87
3.2.5 Energy-optimized structure-based pharmacophore validation .....	88
3.2.6 Pharmacophore-based screening of the database.....	89
3.2.7 Removal of pan-assay interference compounds .....	89
3.2.8 High throughput virtual screening and molecular docking .....	90
3.2.9 Induced fit docking .....	90
3.2.10 Docking using Autodock .....	91
3.2.11 Prime MM-GBSA simulation.....	92
3.2.12 ADME properties prediction .....	92
3.2.13 Density functional theory.....	93
3.2.14 <i>In silico</i> AChE selectivity study .....	93
3.2.15 <i>In vitro</i> AChE and BuChE enzyme inhibition.....	94
3.2.16 Assay of propidium iodide displacement.....	94

3.2.17 <i>In-vitro</i> blood-brain barrier permeation assay .....	94
3.2.18 Determination of cellular cytotoxicity and neuroprotection.....	94
3.2.19 Molecular dynamics simulation.....	94
3.3 Results and Discussion .....	95
3.3.1 Development of ligand-based pharmacophore model .....	95
3.3.2 Validation of ligand-based pharmacophore model .....	95
3.3.3 Development of energy-optimized structure-based pharmacophore .....	96
3.3.4 Validation of energy-optimized structure-based pharmacophore.....	100
3.3.5 Pharmacophore matched screening and removal of pan-assay interference compounds .....	100
3.3.6 High throughput virtual screening and molecular docking .....	101
3.3.7 Induced fit docking .....	105
3.3.8 Docking with AutoDock.....	105
3.3.9 Calculation of Prime MM-GBSA .....	105
3.3.10 Prediction of ADME properties .....	105
3.3.11 Density functional theory.....	108
3.3.12 <i>In silico</i> AChE selectivity study .....	109
3.3.13 <i>In vitro</i> inhibition of AChE and BuChE .....	110
3.3.14 Propidium iodide displacement assay.....	113
3.3.15 <i>In vitro</i> blood-brain barrier permeation assay.....	114
3.3.16 Cellular cytotoxicity and neuroprotection assessment.....	114
3.3.17 Molecular dynamics simulation.....	115
3.4 Conclusions.....	116
3.5 References.....	120
Chapter 4: Identification of human tau-tubulin kinase 1 inhibitors	125
4.1 Introduction.....	125
4.2 Materials and Methods.....	128
4.2.1 Details of computational work tools .....	128
4.2.2 Development of energy-optimized structure-based pharmacophore .....	128
4.2.3 Validation of energy-optimized structure-based pharmacophore.....	129
4.2.4 Pharmacophore-based screening of database .....	130
4.2.5 Removal of pan-assay interference compounds .....	130
4.2.6 High throughput virtual screening and molecular docking .....	130
4.2.7 Induced fit docking .....	131

4.2.8 ADME properties and blood-brain barrier permeability prediction .....	132
4.2.9 Molecular dynamics simulation.....	132
4.3 Results and Discussion .....	133
4.3.1 Development of energy-optimized structure-based pharmacophore .....	133
4.3.2 Validation of energy-optimized structure-based pharmacophore.....	133
4.3.3 High throughput virtual screening and molecular docking .....	136
4.3.4 Induced fit docking .....	137
4.3.5 Predicted ADME properties and blood-brain barrier permeability .....	144
4.3.6 Molecular dynamics simulation.....	145
4.4 Conclusions.....	146
4.5 References.....	148
Chapter 5: Synthesis and evaluation of multitargeted anti-Alzheimer's agent derived from 4-oxo-N, 4-diphenyl-butanamides and (E)-N-aryl-4-hydroxy-4-phenylbut-2- enamides	151
5.1 Introduction.....	151
5.2 Materials and Methods.....	153
5.2.1 Fragment-based drug design.....	153
5.2.2 Molecular docking .....	154
5.2.3 Determination of drug-likeness .....	154
5.2.4 Organic chemistry.....	155
5.2.5 Biological assays.....	176
5.2.6 Molecular dynamics simulation.....	178
5.3 Results and Discussion .....	179
5.3.1 Fragment based drug design .....	179
5.3.2 Molecular docking .....	181
5.3.3 Determination of drug-likeness .....	184
5.3.2 Organic synthesis.....	187
5.3.3 Biological assays.....	187
5.3.4 Molecular dynamics simulation.....	196
5.4 Conclusions.....	200
5.5 References.....	201
Chapter 6: Summary and Perspective	203
Appendix	207
