

List of Tables

<b>Table 2.1</b> Purity, Sources and Physical state of Materials.....	44
<b>Table 3.1</b> Weights in gm of all components.....	72
<b>Table 3.2</b> Galvanic cell measured EMF (mv) for In-Sn-Bi system.....	74
<b>Table 3.3</b> Galvanic cell electromotive force $E$ (millivolt)at different temperature $T$ for Bi-Sn system.....	75
<b>Table 3.4</b> Activity for Bi-Sn system.....	75
<b>Table 3.5</b> Activity of indium ( $a_{In}$ ) in In-Sn Bi alloys.....	76
<b>Table 3.6</b> activity coefficient ( $\gamma_{In}$ ) for In-Sn-Bi alloys.....	78
<b>Table 3.7</b> Partial excess free energy for In-Sn-Bi system.....	84
<b>Table 3.8</b> Free energy function of Indium for Bi-In-Sn alloys at 813K.....	85
<b>Table 3.9</b> Integral excess molar thermodynamic quantities of Bi-In-Sn alloys at 813K along constant isopleths.....	85
<b>Table 3.10</b> Integral excess molar thermodynamic quantities of Bi-In at 813K.....	86
<b>Table 3.11</b> Integral excess molar thermodynamic quantities of Bi-Sn at 813K.....	86
<b>Table 3.12</b> Interaction parameters for In-Bi, In-Sn and Bi-Sn binaries at 813K.....	90
<b>Table 3.13</b> Interaction parameters for Bi-In-Sn System .....	90
<b>Table 3.14</b> Comparison of Model values vs experimental values.....	91
<b>Table 4.1</b> Purities and sources of materials used in the present study.....	98
<b>Table 4.2</b> Integral enthalpy of mixing resulting from calorimetric measurements of Bi-Sn System with Tin dropped at 767, 813 and 855 K. Standard states: pure liquid metal.....	101
<b>Table 4.3</b> Integral enthalpy of mixing resulting from calorimetric measurements of Bi-In System with indium dropped at 767, 813 and 855 K. Standard states: pure liquid metals.....	102
<b>Table 4.4</b> Integral enthalpy of mixing resulting from calorimetric measurements of In-Sn System with indium drop at 767, 813 and 855 K. Standard states: pure liquid metals.....	103
<b>Table 4.5</b> Interaction parameter for Bi-Sn, Bi-In and In-Sn systems.....	110
<b>Table 5.1</b> Purities and sources of materials used in the present study.....	126

**Table 5.2** Integral enthalpy of mixing resulting from calorimetric measurements of Bi-Sn System with tin dropped at 767, 813 and 855 K. Standard states: pure liquid metal.....129

**Table 5.3** Compositions of In, Bi and Sn against different integral enthalpy values.....142

**Table 5.4** Binary and ternary interaction parameters.....145
