
LIST OF TABLES

S. No.	Table	Page No.
3.1	Names of selected antimicrobial peptides (for interaction with <i>S. aureus</i> toxins), their source of origin and their sequences	35
3.2	Sequences of the antimicrobial peptides of <i>Impatiens balsamina</i> used in the interaction studies with ToxT.	36
3.3	Names, source and sequence of antimicrobial peptides selected from microorganism source	36
3.4	Names, source and sequence of antimicrobial peptides selected from plant source	37
4.1	The global energies, non-bond interactions and hydrogen bonds of the docked complexes of the toxins of <i>S. aureus</i> and antimicrobial peptides	52
4.2	Crucial residues of toxins interacting with the antimicrobial peptides in the best docked complexes of <i>S. aureus</i> toxins from all the sets of dockings	63
4.3	In silico characterization of antimicrobial peptide Ib-AMP1	74
4.4	The Global energies, number of non- bond interactions and the number of hydrogen bonds formed from docking interactions of antimicrobial peptides from microorganism source and the catalytic domain of diphtheria toxin are shown.	83
4.5	The Global energies, number of non- bond interactions and the number of hydrogen bonds formed from docking interactions of antimicrobial peptides from plant source and the catalytic domain of diphtheria toxin are shown.	88
4.6	Properties of Alliumin characterized in silico	106
4.7	Analytical Data Sheet of Synthesized Alliumin	109
4.8	Zone of inhibition of synthesized Alliumin against <i>E.coli</i> and <i>S. aureus</i>	110
