

# **LIST OF FIGURES**

<b>Figure No.</b>	<b>Figure Caption</b>	<b>Page No.</b>
<b>Figure 1</b>	Types of the pesticides used in agricultural field	6
<b>Figure 2</b>	Soil incubation in Laboratory	30
<b>Figure 3 (a)</b>	Nutrient agar plating	31
<b>Figure 3(b)</b>	MSM agar and pesticide plating	31
<b>Figure 4</b>	Cubes of PUF used as a packing media	32
<b>Figure 5</b>	Pieces of Loofa sponge	33
<b>Figure 6</b>	Biochemical identification test kit	35
<b>Figure 7(a)</b>	Schematics of packed bed bioreactor system	41
<b>Figure 7(b)</b>	Laboratory experimental setup of packed bed bioreactor system	42
<b>Figure 8</b>	Gel images of 2D gel electrophoresis	44
<b>Figure 9</b>	Schematics of two stage integrated aerobic treatment plant	48
<b>Figure 10</b>	Schematic diagram of coupling method UV-Fenton-Bio-reactor in series	53
<b>Figure 11</b>	Circos visualization for <i>Bacillus</i> sp. S1, <i>Bacillus</i> sp. S2 and <i>Bacillus</i> sp. S4	59
<b>Figure 12</b>	Average degradation rate (per day) of malathion by different isolated <i>Bacillus</i> species	60
<b>Figure 13</b>	Removal of malathion by <i>Bacillus</i> species in free and batch bioreactor system	61
<b>Figure 14</b>	SEM images of (a) Loofa (b) <i>Bacillus</i> sp. S4 immobilized on loofa (c) Biofilm formed by <i>Bacillus</i> sp. S4 on loofa	62
<b>Figure 15</b>	SEM images of <i>Bacillus</i> Sp.S <sub>4</sub> immobilized on PUF (a) PUF before immobilization (0 days) (b) immobilization after startup time (15 <sup>th</sup> day) of the packed bed bioreactor	64
<b>Figure 16</b>	Effect of flow rate and inlet feed rate on degradation efficiency and elimination capacity for the performance of continuous PBBR	66
<b>Figure 17</b>	Correlation of proposed operating zone: Comparison among mass transfer controlling and bio-reaction controlling for the continuous PBBR	68

<b>Figure 18</b>	FT-IR results of (a) control malathion sample and (b) after treatment	69
<b>Figure 19</b>	GC/MS analysis of (a) Malathion and metabolites (b) Malathion monocarboxylic acid, (c) Phosphorodithioniacid,O,O,S-trimethylester (d) Succinic acid.	71
<b>Figure 20(a)</b>	Monod model growth kinetics for malathion biodegradation	72
<b>Figure 20(b)</b>	Inhibition kinetics by Andrew-Haldane model for malathion biodegradation	74
<b>Figure 21</b>	Proposed degradation pathway for malathion degradation	76
<b>Figure 22</b>	Protein spot expressions of gel images	77
<b>Figure 23</b>	Phylogenic analysis and functional details(PFAM no) of identified characterized protein with similar or closely related reference species	82
<b>Figure.24</b>	3D Structure of hypothetical protein (NP_390682.1) by Discovery Studio and Swiss Model and malathion drug used for molecular docking	85
<b>Figure 25</b>	The 3D structures of identified protein	85
<b>Figure 26</b>	Shows (a) protein (NP_390682.1) docking with malathion and (b) major active sites of dock protein with malathion (c) 2D-residual interaction with malathion	88
<b>Figure 27</b>	Performance of IATP evaluated using operating parameter such as pH, DO, Redox and BOD <sub>5</sub> /COD.	90
<b>Figure 28</b>	Overall Performance of Two Stage Integrated Aerobic Treatment Plant during the treatment of synthetic wastewater	93
<b>Figure 29</b>	HPLC analysis result of mixtures of pesticide before treatment	96
<b>Figure 30</b>	HPLC analysis result of mixtures of pesticide after the treatment	97
<b>Figure 31</b>	GC-MS analysis of effluent from Reactor-2 after the treatment of 30 <sup>th</sup> days	98
<b>Figure 32</b>	Kinetic study for (a) estimation of first order rate constant ( $K_{obs}$ ) and(b) Cell Yield ( $Y_{XC}$ ) and Decay Coefficients ( $K_{dp}$ ).	102
<b>Figure 33</b>	Parameter optimization in UV-Fenton process	104
<b>Figure 34</b>	Parameter optimization in packed bed bioreactor	105
<b>Figure 35</b>	Three stage coupling method for the removal of Atrazine	107
<b>Figure 36</b>	HPLC analysis of control (a) Atrazine and (b) effluent sample after treatment	108
<b>Figure 37</b>	GC-MS analysis of control (a) Atrazine and effluent sample after treatment shows intermediates (b) Biuret and (b) Urea	109
