Abstract	ix
Table of Contents	xii
List of Figures	xvii
List of Tables	xxvii
List of abbreviations and symbols	xxviii
Preface	xxx
Chapter-1: Introduction and Literature Review	1-19
1.1 Background of Aluminum and its alloy	2
1.2. Types of Al alloy	3
1.3 Al-Si alloys	4
1.4 Literature review	5
1.4.1 Bulk Processing of Al-Si alloys	6
1.4.2 Processing of Al-Si alloys through forging operation	7
1.4.3 Processing of Al-Si alloys through extrusion operation	10
1.4.4 Processing of Al-Si alloys through rolling operation	12
1.5 Dry sliding wear behavior of Al-Si alloys	13
1.6 Motivation of the present research work	17
1.7 Formulation of the work	17
1.8 Objective of the thesis	18
1.9 Organization of the thesis	19
Chapter 2: Experimental Work	21-30
2.1 Preparation of dies and mould	21
2.2 Casting of Al-Si alloys	24
	xii

2.3 Preparation of test samples for forging operations	24
2.4 Open die and impression die forging	26
2.5 Converging die forging	27
2.6 Microstructural studies	28
2.7 Mechanical properties evaluation	28
2.8 Wear test	29
Chapter 3: Deformation Behavior and Tribo-Mechanical Properties of the Complex Hypereutectic Al-18Si-2.5Cu-0.6Fe alloy during Forging	
	31-77
3.1 Introduction	31
3.2 Results and Discussion	32
3.2.1 Microstructural features of the as-cast alloy	32
3.2.2 Deformation behavior of the complex hypereutectic Al-18Si-2.5Cu-0.6Fe alloy forged under different die sets	35
3.2.2.1 Deformation behavior of the complex hypereutectic Al-Si alloy during open die forging	36
3.2.2.2 Deformation behavior of the complex hypereutectic Al-Si alloy during impression die forging at room temperature	37
3.2.2.3 Deformation behavior of the complex hypereutectic Al-Si alloy during impression die forging at elevated working temperatures	40
3.2.2.4 Deformation behavior of the complex hypereutectic Al-Si alloy during forging through the converging die	47
3.2.3 Microstructural features of forged complex hypereutectic Al-18Si-2.5Cu-0.6Fe alloy	49
3.2.4 Mechanical properties of the forged complex hypereutectic Al-18Si-2.5Cu- 0.6Fe alloy	56
3.2.4.1 Tensile strength of the forged alloy	56
3.2.4.2 Hardness	62
3.2.4.3 Fractography	64

3.2.5 Wear behavior of the as-cast and forged complex hypereutectic Al-18Si-2.5Cu-0.6Fe alloy	66
3.2.5.1 Wear behavior of the as-cast and forged complex hypereutectic Al-Si alloy through converging die	67
3.2.5.2 Wear Mechanism	70
3.2.5.3 Roughness measurement	74
3.3 Summary	75

Chapter 4: Deformation behavior and Tribo-Mechanical Properties of the Complex Eutectic Al-11Si-2.5Cu-0.6Fe alloy during Forging

79-116

4.1 Introduction	79
4.2 Results and Discussion	79
4.2.1 Microstructural features of the as-cast alloy	79
4.2.2 Deformation behavior of the complex eutectic Al-11Si-2.5Cu-0.6Fe alloy forged under different die sets	82
4.2.2.1 Deformation behavior of the complex eutectic Al-Si alloy during open die forging	83
4.2.2.2 Deformation behavior of the complex eutectic Al-Si alloy during impression die forging at room temperature	84
4.2.2.3 Deformation behavior of the complex eutectic Al-Si alloy during impression die forging at elevated working temperatures	86
4.2.2.4 Deformation behavior of the complex eutectic Al-Si alloy during converging die forging	90
4.2.3 Microstructural features of the forged complex eutectic Al-11Si-2.5Cu-0.6Fe alloy	91
4.2.4 Mechanical properties of the forged complex eutectic Al-11Si-2.5Cu-0.6Fe alloy	97
4.2.4.1 Tensile strength of the forged alloy	97
4.2.4.2 Hardness	101
4.2.4.3 Fractography	103

4.2.5 Wear behavior of the as-cast and forged complex eutectic Al-11Si-2.5Cu-0.6Fe alloy	105
4.2.5.1 Wear behavior of the as-cast and forged alloy through converging die	105
4.2.5.2 Wear Mechanism	108
4.2.5.3 Roughness measurement	113
4.3 Summary	115
Chapter 5: Deformation Behavior and Tribo-Mechanical Properties of the Complex Hypoeutectic Al-7.4Si-2.5Cu-0.6Fe alloy during Forging	117-155
5.1 Introduction	117
5.2 Results and Discussion	117
5.2.1 Microstructural features of the as-cast alloy	117
5.2.2 Deformation behavior of the complex hypoeutectic Al-7.4Si-2.5Cu-0.6Fe alloy forged under different die sets	120
5.2.2.1 Deformation behavior of the complex hypoeutectic Al-Si alloy during open die forging	121
5.2.2.2 Deformation behavior of the complex hypoeutectic Al-Si alloy during impression die forging at room temperature	122
5.2.2.3 Deformation behavior of the complex hypoeutectic Al-Si alloy during impression die forging at elevated working temperatures	124
5.2.2.4 Deformation behavior of the complex hypoeutectic Al-Si alloy during converging die forging	128
5.2.3 Microstructural features of forged complex hypoeutectic Al-7.4Si-2.5Cu-0.6Fe alloy	129
5.2.4 Mechanical properties of the forged complex hypoeutectic Al-7.4Si-2.5Cu-0.6Fe alloy	136
5.2.4.1 Tensile strength of the forged alloy	136
5.2.4.2 Hardness	139
5.2.4.3 Fractography	141

5.2.5 Wear behavior of the as-cast and forged complex hypoeutectic Al-7.4Si-2.5Cu-0.6Fe alloy	143
5.2.5.1 Wear behavior of the as-cast and forged complex hypoeutectic Al-Si alloy through converging die	144
5.2.5.2 Wear Mechanism	147
5.2.5.3 Roughness measurement	152
5.3 Summary	154
Chapter 6: Comparative Studies of Bulk Processed Complex Al-Si Alloys	157-166
6.1 Introduction	157
6.2 As-cast morphology and physical properties of the Al-Si alloys	157
6.3 Deformation behavior of the complex Al-Si alloys during bulk processing through open die, impression die and converging die forging	158
6.4 Microstructural features of forged complex Al-Si alloys	160
6.5 Mechanical properties of the forged complex Al-Si alloys	161
6.6 Wear behavior of the complex as-cast and forged Alloys A, B and C	164
6.7 Summary	165
Chapter 7 Conclusions and Scope for Future Work	167-171
7.1 Conclusions	169
7.2. Scope for the future work	171
References	173-182
List of publications	183
List of National/International Conferences	185
