

## LIST OF TABLES

---

|                                                                                                                                                    |    |
|----------------------------------------------------------------------------------------------------------------------------------------------------|----|
| <b>Table 2.1:</b> Review of restoration and enhancement of MRI methods.....                                                                        | 26 |
| <b>Table 3.1:</b> Parameters setup of the proposed method for de-noising MR images.....                                                            | 43 |
| <b>Table 3.2:</b> Quantitative comparison on Simulated MR data (Brain Web) using PSNR (SSIM).....                                                  | 44 |
| <b>Table 3.3:</b> Parameters setup of the proposed method for de-noising MR images.....                                                            | 57 |
| <b>Table 3.4:</b> Quantitative comparison on Simulated MR data (Brain Web) using PSNR (RMSE).....                                                  | 58 |
| <b>Table 3.5:</b> Quantitative comparison on Simulated MR data (Brain Web) using SSIM (CP).....                                                    | 58 |
| <b>Table 4.1:</b> Parameters setup of the proposed method for de-noising MR images.....                                                            | 74 |
| <b>Table 5.1:</b> Parameters setup of the proposed method for de-noising MR images.....                                                            | 97 |
| <b>Table 5.2:</b> Quantitative comparison on Simulated MR data (Brain Web) for Rician noise using SSIM (MSE).....                                  | 98 |
| <b>Table 5.3:</b> Quantitative comparison of proposed method on Simulated MR data (Brain Web) for Gaussian noise using PSNR, MSE, SSIM and CP..... | 99 |
| <b>Table 5.4:</b> Quantitative comparison of proposed method on Simulated MR data (Brain Web) for Rayleigh noise using PSNR, MSE, SSIM and CP..... | 99 |
