

# **CONTENTS**

| <b>Chapter</b>   | <b>Subject</b>                                                         | <b>Page No.</b> |
|------------------|------------------------------------------------------------------------|-----------------|
|                  | <b>List of Figures and Tables</b>                                      | <b>i-v</b>      |
|                  | <b>Preface</b>                                                         | <b>vi-ix</b>    |
| <b>Chapter-1</b> | <b>Introduction</b>                                                    | <b>1-69</b>     |
|                  | 1.1 Introduction                                                       |                 |
|                  | 1.1 .1 Griffith phase                                                  |                 |
|                  | 1.1 .2 Spin Glass                                                      |                 |
|                  | 1.1.3 Magnetoelectric effect                                           |                 |
|                  | 1.1.4 Delafossite and Crednerite structure                             |                 |
|                  | 1.1.4.1 CuCrO <sub>2</sub>                                             |                 |
|                  | 1.1.4. 2 CuFeO <sub>2</sub>                                            |                 |
|                  | 1.1.4 .3 CuMnO <sub>2</sub>                                            |                 |
|                  | 1.2 Theoretical Background                                             |                 |
|                  | 1.2.1 Multiferroics                                                    |                 |
|                  | 1.2.2 Symmetry Consideration                                           |                 |
|                  | 1.2.3 Types of Multiferroics : Type-I Multiferroics                    |                 |
|                  | 1.2.3.1 Multiferroic Perovskites                                       |                 |
|                  | 1.2.3.2 Ferroelectricity Due to Lone Pairs                             |                 |
|                  | 1.2.3.3 Ferroelectricity Due to Charge Ordering                        |                 |
|                  | 1.2.3.4 Geometric Ferroelectricity                                     |                 |
|                  | 1.2.4 Type-II Multiferroics: Magnetically Driven Multiferroics         |                 |
|                  | 1.2.4 .1 Spiral Type-II Multiferroics                                  |                 |
|                  | 1.2.4 .2 Collinear spin ordering                                       |                 |
|                  | 1.2.5 Antisymmetric Dzyaloshinskii–Moriya (DM) interaction             |                 |
|                  | 1.2.5.1 Magnetostrictionmodel                                          |                 |
|                  | 1.2.5.2 Spin-current model                                             |                 |
|                  | 1.2.5.3 Spin-dependent d-p hybridization                               |                 |
|                  | 1.2.6 Magnetoelectric coupling                                         |                 |
|                  | 1.2.7 Magnetism                                                        |                 |
|                  | 1.2.7.1 Landau theory of ferromagnetism (Mean Field Theory)            |                 |
|                  | 1.2.7.2 Heisenberg model                                               |                 |
|                  | 1.2.7.3 Ising Models                                                   |                 |
|                  | 1.2.7.4 Landau theory of phase transitions                             |                 |
|                  | 1.2.7.5 Critical exponents of various models                           |                 |
|                  | 1.2.8 Exchange bias phenomenology                                      |                 |
|                  | 1.2.8 .1 The ideal Meiklejohn-Bean model                               |                 |
|                  | 1.2.8.2 Training effect                                                |                 |
|                  | 1.2.9 Spin Glass                                                       |                 |
|                  | 1.2.10 The Griffiths model                                             |                 |
|                  | 1.2.10.1 Critical behavior of the ferromagnetic in the Griffiths phase |                 |
|                  | 1.2.11 Transport Properties                                            |                 |
|                  | 1.2.11.1 Variable Range Hopping                                        |                 |
|                  | 1.2.11.2 Arrhenius law                                                 |                 |
|                  | 1.2.11.3 The Modified Arrott Plot                                      |                 |
|                  | 1.2.12 Motivation and Importance of the studied systems                |                 |
|                  | References                                                             |                 |

|                  |                                                                                                     |                |
|------------------|-----------------------------------------------------------------------------------------------------|----------------|
| <b>Chapter-2</b> | <b>Experimental: Synthesis Procedure and Characterization Details</b>                               | <b>70-87</b>   |
|                  | 2.1 Sample Synthesis                                                                                |                |
|                  | 2.1.1: Overview                                                                                     |                |
|                  | 2.1.2: Solid State Reaction Technique.                                                              |                |
|                  | 2.2 Experimental Tools & Their Working Principle                                                    |                |
|                  | 2.2.1: X- ray Diffraction                                                                           |                |
|                  | 2.2.2: Neutron Diffraction                                                                          |                |
|                  | 2.2.3: Superconducting Quantum Interference Device                                                  |                |
|                  | 2.2.4: X-ray photoemission spectroscopy                                                             |                |
|                  | 2.2.5: UV-Vis spectroscopy                                                                          |                |
|                  | 2.2.6: X-ray Photoelectron Spectroscopy                                                             |                |
|                  | 2.2.7: Resistivity Measurement                                                                      |                |
|                  | References                                                                                          |                |
| <b>Chapter-3</b> | <b>Magnetic and optical properties of Fe doped Crednerite <math>\text{CuMnO}_2</math>.</b>          | <b>88-111</b>  |
|                  | 3.1: Introduction                                                                                   |                |
|                  | 3.2: Experimental                                                                                   |                |
|                  | 3.3: Results and Discussion                                                                         |                |
|                  | 3.3.1: Synchrotron X-ray diffraction                                                                |                |
|                  | 3.3.2: Study with Neutron diffraction                                                               |                |
|                  | 3.3.3: X-ray Photoemission Spectroscopy Study                                                       |                |
|                  | 3.3.4: Electronic transport property study (Resistivity Measurement)                                |                |
|                  | 3.3.5: Optical Property (Absorption Spectra)                                                        |                |
|                  | 3.3.6: Study of Magnetic property                                                                   |                |
|                  | 3.4: Conclusions                                                                                    |                |
|                  | References                                                                                          |                |
| <b>Chapter-4</b> | <b>Griffith-like phase in Crednerite <math>\text{CuMnO}_2</math>.</b>                               | <b>112-127</b> |
|                  | 4.1: Introduction                                                                                   |                |
|                  | 4.2: Experimental                                                                                   |                |
|                  | 4.3: Results and Discussion                                                                         |                |
|                  | 4.3.1: X-ray diffraction study                                                                      |                |
|                  | 4.3.2: Magnetic Property                                                                            |                |
|                  | 4.3.2.1 DC Susceptibility                                                                           |                |
|                  | 4.3.2.2 AC Susceptibility                                                                           |                |
|                  | 4.4: Conclusions                                                                                    |                |
