

ACKNOWLEDGEMENT

First of all, I would like to express my sincere gratitude to my supervisor, *Professor R. K. Pandey*, for valuable research opportunity, endless encouragement and affectionate guidance given by him. I really learned a lot from his thorough insight into power systems stability and control, and his way of carrying out research.

I would like to express my appreciation to my thesis RPEC committee: Professor S. K. Pandey, Professor S. K. Nagar for their valuable contributions, help, and suggestions for the research.

I am thankful to all faculty members and research scholars of the department, especially for their valuable comments and suggestions. I also thank all staff members of the department and library for their cooperation in completion of this work.

Finally, I am forever grateful to my parents and family members for their understanding and support during these years.
