## LIST OF FIGURES

---

---

|  |    |
|--|----|
| Figure 1. 1: Different technical measures on the CO <sub>2</sub> emission.....   | 4  |
| Figure 2. 1: Specific Strength of different materials .....  | 7  |
| Figure 2. 2: Specific stiffness of different materials.....  | 8  |
| Figure 2. 3: General classification of applications magnesium alloys. ....   | 9  |
| Figure 2. 4: Applications of magnesium alloys parts in an automobile .....   | 10 |
| Figure 2. 5: (a) AZ80 compressor wheel produced by closed-die forging; (b) WE43<br>impeller with twisted blades; (c) WE43 compressor upper case for air<br>conditioning system produced by closed- die forging; (d) AZ31B euro<br>copter antenna support produced by deep drawing; (e) AZ80- forged airbus<br>window frame; (f) AZ80- forged door stop fitting ..... | 12 |
| Figure 2. 6: Different parts of the helicopter where magnesium alloy is used .....   | 12 |
| Figure 2. 7: Application of Magnesium alloy in sports and leisure equipment.....   | 14 |
| Figure 2. 8: Application of magnesium alloy as an orthopedic implant.....  | 15 |
| Figure 2. 9: Die-cast magnesium alloy laptop computer case (Image courtesy of Stihl<br>and spotlight metal).....   | 16 |
| Figure 2. 10: Use of magnesium alloy in the housing a) digital camera and b) handy cam<br>.....  | 16 |
| Figure 2. 11: Thixomolded magnesium compound edge eyewear .....  | 17 |
| Figure 2. 12: Circular power saw made by die-cast magnesium bases and blade guard.   | 17 |
| Figure 2. 13: Showing the effect of magnesium melt protection.....   | 25 |
| Figure 2. 14: Schematic of the Ellingham diagram for selected oxides, the magnesium<br>oxidation is marked with a dashed line.....   | 26 |
| Figure 2. 15: The hazardless of one standard cylinder 52 kg of SF <sub>6</sub> equivalent to CO <sub>2</sub><br>emission by 240 U.S. passenger for one year or absorption of it by planting<br>210 acres of trees .....  | 28 |
| Figure 2. 16: Schematic of stir casting set-up for magnesium casting .....   | 31 |
| Figure 2. 17: Metal matrix composites types.....   | 32 |

|   |    |
|---|----|
| Figure 2. 18: Contact angle ( $\theta$ ) between solid-liquid, solid-gas, and liquid –gas.....  | 37 |
| Figure 2. 19: Experimental and theoretical CTE values predicted from the various models as a function of weight percentage of SiC reinforcement particulate (25 $\mu$ m) in Mg matrix ..... | 41 |
| Figure 2. 20: The Experimental and theoretical elastic modulus values predicted through different models, as a function of the amount of SiC in the aluminum matrix .....                   | 42 |
| Figure 2. 21: Schematic illustrations of the stresses of a rectangular platelet .....   | 44 |
| Figure 2. 22: The six stages in the coefficient of friction versus distance slid relationship .....   | 52 |
| Figure 3. 1: Morphology of SiC particulates .....   | 61 |
| Figure 3. 2 : EDAX of SiC particulates .....  | 62 |
| Figure 3. 3: Morphology of TiC particulates.....  | 62 |
| Figure 3. 4: EDAX of TiC particulates.....  | 62 |
| Figure 4. 1: General schematic view of stir casting set-up .....  | 70 |
| Figure 4. 2: Schematic of the general stir casting set-up. ....   | 71 |
| Figure 4. 3: Photograph of first experimental stir casting set-up.....  | 72 |
| Figure 4. 4: Initial stirrer motor. ....  | 73 |
| Figure 4. 5: Modified Stirrer motor. ....   | 73 |
| Figure 4. 6: First magnesium alloy casting a) Backside b) Front side.....   | 74 |
| Figure 4. 7: Schematic of the vacuum-assisted inert atmosphere experimental set-up ..   | 75 |
| Figure 4. 8: Furnace with other attachments.....  | 76 |
| Figure 4. 9: Metallic crucible with flange.....   | 77 |
| Figure 4. 10: Different position of stirrer motor assembly .....  | 78 |
| Figure 4. 11: Pneumatic high-pressure cylinder arrangement for opening and closing of the pouring valve.....  | 78 |
| Figure 4. 12: a) Die holder with die b) two-part die of cast iron .....   | 79 |

|  |    |
|--|----|
| Figure 4. 13: Pressure variation at different time frame a) normal condition b) vacuum reaction c) melting and pouring .....   | 79 |
| Figure 4. 14: Different modes of reinforcement addition in molten metal a) through anti-chamber b) aluminum foil capsule c) array of the hole .....                        | 80 |
| Figure 4.15: Photograph of Cast product.....   | 82 |
| Figure 5.1: Optical Micrograph of AZ91 Magnesium Alloy at different magnifications a) 50X b) 100X c) 200X d)500X .....   | 86 |
| Figure 5.2: Optical Micrograph of AZ91 Magnesium Alloy at different places with magnifications 200X.....   | 87 |
| Figure 5.3: Optical Micrograph of AZ91/SiC Magnesium Alloy composite at different weight percentage a) 3 % SiC b) 6% SiC c) 9% SiC d) 12 % SiC .....                       | 87 |
| Figure 5.4: SEM micrograph showing distribution of SiC particulate in AZ91 magnesium alloy (a) 3 % SiC (b) 6% SiC (c) 9% SiC (d) 12% SiC.....                              | 88 |
| Figure 5.5: X-ray diffraction analysis of magnesium alloy and its composites with different (3%, 6%,9% and 12%) weight percentage.....                                     | 89 |
| Figure 5. 6: Variation of Vickers microhardness at the load of 9.81N at different location of the alloy and composites with different percentage of SiC particulates ..... | 91 |
| Figure 5. 7: Average Vickers microhardness of alloy and composite with different percentage of SiC particulates at the load of 9.81 N.....                                 | 92 |
| Figure 5. 8: Engineering stress-strain curve of AZ91 and its composite reinforced with SiC particulates .....  | 94 |
| Figure 5. 9: Variation of ultimate tensile strength and yield strength with a variation of SiC particulates .....  | 94 |
| Figure 5. 10: Representation of ultimate compressive strength of alloy and composites with different percentage of SiC .....   | 96 |
| Figure 5. 11: SEM micrograph of cast magnesium alloy AZ91 .....  | 97 |
| Figure 5. 12: SEM micrograph of cast magnesium alloy AZ91 based composites a) 3% SiC b) 6% SiC c) 9% SiC d) 12% SiC .....  | 97 |
| Figure 5. 13: Fractured samples in a compression test .....  | 98 |
| Figure 5. 14 SEM micrograph of the fracture surface of AZ91 at different magnification a) 41X b) 100X c) 200X d)500X .....   | 99 |

|  |     |
|--|-----|
| Figure 5. 15: SEM micrograph of fracture surface of AZ91 based composites reinforced with a) 3% SiC b) 6% SiC c) 9% SiC d) 12% SiC .....   | 99  |
| Figure 5. 16: The variation of wear weight loss with normal load at a constant sliding speed of 1.39 m/s .....   | 103 |
| Figure 5. 17: The variation of wear rate with an applied normal load of AZ91 magnesium alloy and its composite reinforced by SiC particulates .....  | 105 |
| Figure 5. 18: Average coefficient of friction of the AZ91 magnesium alloy and its composites at different normal load.....   | 105 |
| Figure 5. 19: Variation average coefficient of friction of the AZ91 magnesium alloy and its composites at a different weight percentage of SiC and different normal load.....  | 106 |
| Figure 5. 20: Variation of wear loss of AZ91 magnesium alloy at different velocity and different applied normal load.....  | 107 |
| Figure 5. 21: Variation of wear loss of 3 weight percent SiC in AZ91 magnesium alloy at different velocity and different applied normal load .....   | 107 |
| Figure 5. 22: Variation of wear loss of 6 weight percent SiC in AZ91 magnesium alloy at different velocity and different applied normal load .....   | 108 |
| Figure 5. 23: Variation of wear loss of 9 weight percent SiC in AZ91 magnesium alloy at different velocity and different applied normal load .....   | 108 |
| Figure 5. 24: Variation of wear loss of 12 weight percent SiC in AZ91 magnesium alloy at different velocity and different applied normal load .....  | 109 |
| Figure 5. 25: SEM micrographs of the worn surfaces of AZ91 magnesium alloy a) 39.24 N, 2.6 m/s and 200X b) 19.62 N, 2.6 m/s and 1000X c) 39.24 N, 1.39 m/s and 500X d) 39.24 N, 1.39 m/s and 1000X .....             | 111 |
| Figure 5. 26: SEM micrographs of the worn surfaces of SiC reinforced AZ91 magnesium alloy composite a) 39.24 N, 1.3 m/s and 6% SiC b) 19.62 N, 2.6 m/s 3% SiC c) 58.86 , 2.6 m/s 9% SiC d) 39.24 N, 2.6 m/s 12% SiC. | 111 |
| Figure 5. 27: Energy-dispersive X-ray spectroscopy of worn surfaces.....   | 113 |
| Figure 6. 1: Optical micrograph of TiC/AZ91 magnesium alloy composite at different weight percentage a) 3 % TiC b) 6% SiC c) 9% TiC d) 12 % TiC.....   | 118 |
| Figure 6. 2: Optical Micrograph of TiC/AZ91 magnesium alloy composite at higher magnifications a) 3 % TiC b) 6% TiC c) 9% TiC d) 12 % TiC.....   | 118 |

|  |     |
|--|-----|
| Figure 6. 3: SEM micrograph showing distribution of TiC particulate in AZ91 magnesium alloy (a) 3 % TiC (b) 6% TiC (c) 9% TiC (d) 12% TiC.....                                       | 119 |
| Figure 6. 4: X-ray diffraction analysis of magnesium alloy and its composites with different (3%, 6%,9% and 12%) weight percentage of TiC particulates...                            | 120 |
| Figure 6. 5: Comparative plot of peaks of TiC particulates and AZ91 magnesium alloy .....  | 121 |
| Figure 6. 6: Variation of Vickers micro hardness of magnesium alloy and its composites reinforced .....  | 122 |
| Figure 6. 7: Average Vickers micro hardness of AZ91 alloy and its composite with different percentage of TiC particulates reinforcement. ....  | 123 |
| Figure 6. 8: Engineering stress-strain curve of AZ91 and its composite reinforced with SiC particulates .....  | 125 |
| Figure 6. 9: Variation of ultimate tensile strength and yield strength with variation of SiC particulates .....  | 125 |
| Figure 6. 10: Representation of ultimate compressive strength of AZ91 alloy and its composites reinforced with different weight percentage of TiC. ....                              | 127 |
| Figure 6. 11: SEM micrograph of cast magnesium alloy AZ91 based composites a) 3% TiC b) 6% TiC c) 9% TiC d) 12% TiC.....   | 128 |
| Figure 6. 12: SEM micrograph of 6 % TiC reinforced magnesium alloy composites at different magnification a) 49X b) 500X c) 2000X d) 5000X. ....                                      | 128 |
| Figure 6. 13: The variation of wear weight loss with different normal load at sliding speed 1.39 m/s.....  | 133 |
| Figure 6. 14: The variation of wear rate with applied normal load of AZ91 magnesium alloy and its composite reinforced by TiC particulates. ....                                     | 133 |
| Figure 6. 15: Average coefficient of friction of the AZ91 magnesium alloy and its composites reinforced with TiC particulates at different applied normal load.....                  | 134 |
| Figure 6. 16: Variation average coefficient of friction of the AZ91 magnesium alloy and its composites at different weight percentage of TiC and different applied normal load. .... | 134 |
| Figure 6. 17: Variation of wear rate of AZ91 magnesium alloy at different velocity and different applied normal load.....  | 135 |

Figure 6. 18: Variation of wear rate of 3 percent weight of TiC in AZ91 magnesium alloy at different velocity and different applied normal load. .... 136

Figure 6. 19: Variation of wear loss of 6 percent weight of TiC in AZ91 magnesium alloy at different velocity and different applied normal load. .... 136

Figure 6. 20: Variation of wear loss of 9 percent weight of TiC in AZ91 magnesium alloy at different velocity and different applied normal load. .... 137

Figure 6. 21: Variation of wear loss of 12 percent weight of TiC in AZ91 magnesium alloy at different velocity and different applied normal load. .... 137

Figure 6. 22: SEM micrographs of the worn surfaces of TiC reinforced AZ91 magnesium alloy composite a) 39.24 N, 1.3 m/s and 6% TiC b) 19.62 N, 2.6 m/s 3% TiC c) 58.86 , 2.6 m/s 9% TiC d) 39.24 N, 2.6 m/s 12% TiC.. ..... 139

## LIST OF TABLES

---

---

|  |     |
|--|-----|
| Table 2. 1: ASTM designation system of magnesium alloy [18], [70]. .....   | 22  |
| Table 2. 2 Temper designation for magnesium alloy [18].....  | 23  |
| Table 2. 3: List of some typical matrix materials [86], [88]–[90] .....  | 33  |
| Table 2. 4: Some common reinforcements and their properties .....  | 36  |
| Table 3. 1: The composition ( % wt. )of commercial alloy AZ91 .....  | 60  |
| Table 4. 1: Different pats/ dimension and its specifications.....  | 72  |
| Table 4. 2: Effect of a different mode of reinforcement addition with the decision .....   | 81  |
| Table 5.1: Density and porosity measurements of AZ91 alloy and its composite (AZ91/SiC) .....                                    | 85  |
| Table 5. 2: Vickers microhardness of magnesium alloy and its composite.....  | 91  |
| Table 5. 3: The ultimate tensile strength and yield Strength .....   | 93  |
| Table 5. 4: Ultimate Compressive strengths of AZ91 alloy and its composites.....   | 95  |
| Table 5. 5: Parameters for the pin on disk dry sliding wear test.....  | 101 |
| Table 5. 6: Summary of wear mechanisms for different combination of normal load, sliding speed and pin materials. ....           | 112 |
| Table 6. 1: Density and porosity measurements of AZ91 alloy and its composite reinforced with TiC particulates .....             | 116 |
| Table 6. 2: The average Vickers microhardness of magnesium alloy and its composite .....   | 123 |
| Table 6. 3: The ultimate tensile strength and yield strength.....  | 124 |
| Table 6. 4: Ultimate compressive strength of AZ91 alloy and its composites reinforced with different weight percent of TiC ..... | 126 |
| Table 6. 5: Parameters for the pin on disk dry sliding wear test.....  | 131 |
| Table 6. 6: Prediction of wear mechanisms for a different combination of normal load, sliding speed and pin materials. ....      | 140 |
