

Table No.	Table Captions	Page No.
5.1	Chemical Structures and Physicochemical Properties of Compounds S14a-S14o	59
5.2	Albumin Denaturation Assay	66
5.3	Carrageenan-Induced Paw Oedema	68
5.4	Arachidonic Acid-Induced Paw Oedema	70
5.5	Cotton Pellet-Induced Granuloma	71
5.6	Adjuvant-Induced Arthritis and Ulcer Index	72
5.7	Effect of Selected Potential Compounds on Hepatic and Renal Toxicity Parameters as Evaluated on 21 st Day after Treatment	74
5.8	Acetic Acid-Induced Writhing	77
5.9	Formalin-Induced Paw Licking	78
5.10	COX Inhibitory Activity and Selectivity Index (COX-1/COX-2) of Selected Compounds	79
5.11	Glide Score and Docking Interactions of Selected Potential Compounds.	80
5.12	Calculated Lipinski's Rule of Five for the Most Active Compounds	85
5.13	Chemical Structures and Physicochemical Properties of Compounds S22a-S22e; S23a-S23e; S24a-S24e	87
5.14	Albumin Denaturation Assay	96
5.15	Carrageenan-Induced Paw Oedema	98
5.16	Arachidonic Acid-Induced Paw Oedema	99
5.17	Cotton Pellet-Induced Granuloma	100
5.18	Adjuvant-Induced Arthritis, Ulcer Index and Lipid Peroxidation	102
5.19	Effect of Selected Potential Compounds on Hepatic and Renal Toxicity Parameters as Evaluated on 21 st Day after Treatment	105
5.20	Acetic Acid-Induced Writhing	106
5.21	Formalin-Induced Paw Licking	107
5.22	COX Inhibitory Activity and Selectivity Index (COX-1/COX-2) of Selected Compounds	108
5.23	Effects of Celecoxib, S22e and S23c on the Levels of cTnI on ISO Induced Myocardial Infarcted Rats	111
5.24	Effects of Celecoxib, S22e and S23c on the Levels of CK-MB on ISO Induced Myocardial Infarcted Rats	111
5.25	Glide Score and Docking Interactions of Selected Potential Compounds	113
5.26	Predicted Drug Likelihood Properties for the Most Active Compounds	119
