

LIST OF TABLES

Table 2.1	Summary of results reported by authors based on conventional size tubes	30
Table 2.2	Summary of results reported by authors based on mini size tubes	34
Table 3.1	Geometrical configurations of helical coils	38
Table 3.2	Location of RTD	39
Table 3.3	Experimental uncertainties	45
Table 4.1	Percent deviation between present and other correlation for present data	61
Table 4.2	Percent deviation between predicted values and experimental data of Cioncolini and Santini's (2006) data	63
Table 4.3	Percent deviation between present correlation and other for present data	71
Table 4.4	Percent deviation between predicted values and experimental data of Kahani et al.'s (2013)	73
Table D.1	Thermo physical properties of working fluids	117
D.1.1	Thermo physical properties of water	117
D.1.2	Thermo physical properties of methanol	117
D.1.3	Thermo physical properties of acetone	119
Table D.2	Calibration of measuring devices	120
D.2.2	Calibration of flow measuring device	121
D.2.3	Calibration of power	121
Table D.3	Friction factor in straight tube sections	122
D.3.1	Friction factor in a straight tube of inner diameter 720 μm for water	123
D.3.2	Friction factor in a straight tube of inner diameter 720 μm for methanol	123
D.3.3	Friction factor in a straight tube of inner diameter 720 μm for acetone	124
D.3.4	Friction factor in a straight tube of inner diameter 850 μm	124

	for water	
D.3.5	Friction factor in a straight tube of inner diameter 850 μm for methanol	125
D.3.6	Friction factor in a straight tube of inner diameter 850 μm for acetone	125
D.3.7	Friction factor in a straight tube of inner diameter 1000 μm for water	126
D.3.8	Friction factor in a straight tube of inner diameter 1000 μm for methanol	126
D.3.9	Friction factor in a straight tube of inner diameter 1000 μm for acetone	127
Table D.4	Friction factor in helical coils	128
D.4.1	Friction factor in a helical coil of inner diameter 720 μm for water	129
D.4.2	Friction factor in a helical coil of inner diameter 720 μm for methanol	129
D.4.3	Friction factor in a helical coil of inner diameter 720 μm for acetone	130
D.4.4	Friction factor in a helical coil of inner diameter 850 μm for water	130
D.4.5	Friction factor in a helical coil of inner diameter 850 μm for methanol	131
D.4.6	Friction factor in a helical coil of inner diameter 850 μm for acetone	131
D.4.7	Friction factor in a helical coil of inner diameter 1000 μm for water	132
D.4.8	Friction factor in a helical coil of inner diameter 1000 μm for methanol	132
D.4.9	Friction factor in a helical coil of inner diameter 1000 μm for acetone	133
Table D.5	Average heat transfer coefficient in a helical coil	134
D.5.1	Average heat transfer coefficient in a helical coil of inner	135

	diameter 720 μm for water	
D.5.2	Average heat transfer coefficient in a helical coil of inner diameter 720 μm for methanol	135
D.5.3	Average heat transfer coefficient in a helical coil of inner diameter 720 μm for acetone	136
Table D.6	Average Nusselt number in a helical coil	137
D.6.1	Average Nusselt number in a helical coil of inner diameter 720 μm for water	138
D.6.2	Average Nusselt number in a helical coil of inner diameter 720 μm for methanol	138
D.6.3	Average Nusselt number in a helical coil of inner diameter 720 μm for acetone	139
Table D.7	Experimentally calculated friction factor ratio (f_c / f_s) and those predicted from present correlation	140
D.7.1	Friction factor ratio helical coil to that for straight tube of inner diameter 720 μm for water	141
D.7.2	Friction factor ratio helical coil to that for straight tube of inner diameter 720 μm for water	141
D.7.3	Friction factor ratio helical coil to that for straight tube of inner diameter 720 μm for acetone	142
D.7.4	Friction factor ratio helical coil to that for straight tube of inner diameter 850 μm for water	142
D.7.5	Friction factor ratio helical coil to that for straight tube of inner diameter 850 μm for methanol	143
D.7.6	Friction factor ratio helical coil to that for straight tube of inner diameter 850 μm for acetone	143
D.7.7	Friction factor ratio helical coil to that for straight tube of inner diameter 1000 μm for water	144
D.7.8	Friction factor ratio helical coil to that for straight tube of inner diameter 1000 μm for methanol	144
D.7.9	Friction factor ratio helical coil to that for straight tube of inner diameter 1000 μm for acetone	145

Table D.8	Experimentally calculated friction factor ratio (f_c / f_s) and those predicted from correlations of Mishra and Gupta (1979), Ito (1969), White (1934) and Mori and Nakayama (1967)	146
D.8.1	Friction factor ratio helical coil to that for straight tube of inner diameter 720 μm for water	147
D.8.2	Friction factor ratio helical coil to that for straight tube of inner diameter 720 μm for water	148
D.8.3	Friction factor ratio helical coil to that for straight tube of inner diameter 720 μm for acetone	148
D.8.4	Friction factor ratio helical coil to that for straight tube of inner diameter 850 μm for water	149
D.8.5	Friction factor ratio helical coil to that for straight tube of inner diameter 850 μm for methanol	149
D.8.6	Friction factor ratio helical coil to that for straight tube of inner diameter 850 μm for acetone	150
D.8.7	Friction factor ratio helical coil to that for straight tube of inner diameter 1000 μm for water	150
D.8.8	Friction factor ratio helical coil to that for straight tube of inner diameter 1000 μm for methanol	151
D.8.9	Friction factor ratio helical coil to that for straight tube of inner diameter 1000 μm for acetone	151
Table D.9	Cioncolini and Santini's (2006) friction factor data	152
Table D.10	Cioncolini and Santini's (2006) experimental friction factor data and (f_c / f_s) predicted from present correlation	152
Table D.11	Cioncolini and Santini's (2006) experimental friction factor data and (f_c / f_s) predicted from correlations of Mishra and Gupta (1979) and Ito (1969)	153
Table D.12	Cioncolini and Santini's (2006) experimental friction factor data and (f_c / f_s) predicted from correlations of White (1934) and Mori and Nakayama (1967)	153
Table D.13	Experimental friction factor ratio (f_c / f_s) of both	154

	(present and Cioncolini and Santini (2006)) and those predicted from the generalized correlation	
D.13.1	Friction factor ratio in tube diameter of 720 μm and those predicted from generalized correlation for water	155
D.13.2	Friction factor ratio helical coil in tube diameter of 720 μm and those predicted from generalized correlation for water	155
D.13.3	Friction factor ratio in tube diameter of 720 μm and those predicted from generalized correlation for acetone	156
D.13.4	Friction factor ratio in tube diameter of 850 μm and those predicted from generalized correlation for water	156
D.13.5	Friction factor in tube diameter of 850 μm and those predicted from generalized correlation for methanol	157
D.13.6	Friction factor ratio in tube diameter of 850 μm and those predicted from generalized correlation for acetone	157
D.13.7	Friction factor ratio in tube diameter of 1000 μm and those predicted from generalized correlation for water	158
D.13.8	Friction factor ratio in tube diameter of and those predicted from generalized correlation for methanol	158
D.13.9	Friction factor ratio in tube diameter of 1000 μm and those predicted from generalized correlation for acetone	159
D.13.10	Friction factor ratio of Cioncolini and Santini (2006) and those predicted from generalized correlation	159
Table D.14	Experimental Nusselt number and those predicted from present correlation in a helical coil	160
D.14.1	Experimental Nusselt number and those predicted from present correlation in a helical coil of inner diameter 720 μm for water	161
D.14.2	Experimental Nusselt number and those predicted from present correlation in a helical coil of inner diameter 720 μm for methanol	161
D.14.3	Experimental Nusselt number and those predicted from	162

	present correlation in a helical coil of inner diameter 720 μm for acetone	
Table D.15	Experimental Nusselt number and those predicted from correlations of Kalb and Seider (1974) and Dravid et al. (1971) in a helical coil	163
D.15.1	Experimental Nusselt number and those predicted from correlations Kalb and Seider (1974) and Dravid et al. (1971) in a helical coil for water	164
D.15.2	Experimental Nusselt number and those predicted from correlations Kalb and Seider (1974) and Dravid et al. (1971) in a helical coil for methanol	164
D.15.3	Experimental Nusselt number and those predicted from correlations Kalb and Seider (1974) and Dravid et al. (1971) in a helical coil for acetone	165
Table D.16	Kahani et al.'s (2006) heat transfer data	165
Table D.17	Kahani et al.'s (2013) experimental Nussult number and those predicted from present correlation	168
Table D.18	Kahani et al.'s (2013) experimental Nussult number and those predicted from correlations of Kalb and Seider (1974) and Dravid et al. (1971)	168
Table D.19	Experimental Nusselt number of both (present and Kahani et al. (2013)) and those predicted from the generalized correlation	171
Table D.20	Uncertainty in friction factor for straight tubes	174
D.20.1	Uncertainty in friction factor for a straight tube of inner diameter 720 μm with water	175
D.20.2	Uncertainty in friction factor for a straight tube of inner diameter 720 μm with methanol	175
D.20.3	Uncertainty in friction factor for a straight tube of inner diameter 720 μm with acetone	176
D.20.4	Uncertainty in friction factor for a straight tube of inner diameter 850 μm with water	176
D.20.5	Uncertainty in friction factor for a straight tube of inner diameter 850 μm with methanol	177
D.20.6	Uncertainty in friction factor for a straight tube of inner	177

	diameter 850 μm with acetone	
D.20.7	Uncertainty in friction factor for a straight tube of inner diameter 1000 μm with water	178
D.20.8	Uncertainty in friction factor for a straight tube of inner diameter 1000 μm with methanol	178
D.20.9	Uncertainty in friction factor for a straight tube of inner diameter 1000 μm with acetone	179
Table D.21	Uncertainty in friction factor for helical coils	179
D.21.1	Uncertainty in friction factor for a helical coil of inner diameter 720 μm with water	179
D.21.2	Uncertainty in friction factor for a helical coil of inner diameter 720 μm with methanol	180
D.21.3	Uncertainty in friction factor for a helical coil of inner diameter 720 μm with acetone	180
D.21.4	Uncertainty in friction factor for a helical coil of inner diameter 850 μm with water	181
D.21.5	Uncertainty in friction factor for a helical coil of inner diameter 850 μm with methanol	181
D.21.6	Uncertainty in friction factor for a helical coil of inner diameter 850 μm with acetone	182
D.21.7	Uncertainty in friction factor for a helical coil of inner diameter 1000 μm with water	182
D.21.8	Uncertainty in friction factor for a helical coil of inner diameter 1000 μm with methanol	183
D.21.9	Uncertainty in friction factor for a helical coil of inner diameter 1000 μm with acetone	183
Table D.22	Uncertainty in Nusselt number for a helical coil	184
D.22.1	Uncertainty in Nusselt number for a helical coil of inner diameter 720 μm with water	184
D.22.2	Uncertainty in Nusselt number for a helical coil of inner diameter 720 μm with methanol	185
D.22.3	Uncertainty in Nusselt number for a helical coil of inner diameter 720 μm with acetone	185
