

ACKNOWLEDGEMENTS

The meticulous and inimitable style of reviewing and guidance by Professor S.K. Panda, Department of Mechanical Engineering, Indian Institute of Technology, Banaras Hindu University, Varanasi, throughout my research work has left an indelible impression on me. I am highly indebted and grateful to him for his constant inspiration, discussion of intricacies of investigation, help and support during the entire period of work of this dissertation. I received many useful and excellent academic training from him, which has stood in good stead while writing this thesis. Nevertheless, it helped me acquire, develop and sharpen some of the skills and scientific methodologies of good independent research. In fact, I availed excellent facilities and felt really happy and rich during my research period, for which I am very much thankful to my professor. His advices are invaluable to a researcher.

I am very much obliged to Dr. Debashis Khan, Department of Mechanical Engineering for their valuable guidance as my co-supervisor. I am grateful to the Head of the Mechanical Engineering Department, IIT Kharagpur, for providing me the necessary facilities to carry out my research work. Encouragements from Prof V.P. Singh, Prof. A.K. Agrawal, Prof. A. K. Jha and Prof. A.P. Harsha of the Department of Mechanical Engineering are gratefully acknowledged. I take this opportunity to express my warm regards to all the faculty members of the Department of Mechanical engineering for their encouragement and advice extended to me. I give my sincere regard to Dr. Kaushik Chattopadhyay, Department of Metallurgical Engineering for their support in material characterization. I wish to express my sincere gratitude for the financial support provided by the grant-in aid of Department of Atomic Energy, India scientific research grant under Grant No. 2011/36/62-BRNS.

My sincere thanks are due to my research colleagues Ms. Saumya Shah, Praveen Kumar, Ashish Kumar and Anupam Tiwari, for their cooperation and help rendered to me and some of the post graduate student Sanjeev, Shivam, Prince, Rachit, Rajat, Kartheek, Yash, Saikiran, Abhimanyu for their support. I am also thankful to undergraduate students Abhinav, Ajay, Suraj, Yahan, Prithvi, Deep, Yatharth for their continuous support to understand the subject more efficiently. Thanks are due to Ram Ji and Lal Ji of the Workshop for their kind assistance.

I gave sincere thanks to Noel N. Nemeth, senior scientist at NASA (Glenn Research Centre) and Dr. Makuteswara Srinivasan (United State Nuclear Regulatory Commission) for their motivation and support. I am also very grateful to Prof. James Marrow (University of Oxford) for their support and immensely valuable technical answers.

It gives me immense pleasure and satisfaction to express my respect and gratitude to my parents, my wife Kavita, my sisters Ashwini, Rajni for their constant inspiration and unconditional moral support. It is difficult to hide my love and affection for my new born baby an angel she is, for whom sometimes I realise to be at fault for not providing sufficient time. I take this opportunity to beg pardon to the almighty for any known or unknown sorrows caused to the all mankind.

A word of appreciation for my wife is for his unbiased and untiring encouragement for me. How much I do wish my grandfather Shri Ram Kripal Singh to be here at this moment, let his soul may live in peace in heaven. A lighter moment, I would like to share with my aunty Sushma and Meera, whose all endeavour have been to provide me the most delicious foods during vacations, which she feels might energize me for the research work.

As always it happens to ignore someone very near unintentionally, It is my pleasure to express a deep sense of thankfulness to all those, but for whose cooperation and direct or indirect support this thesis work would not have been reconciled.

(Awani Bhushan)
