

LIST OF FIGURES

- Figure 1.1 Various stages of computer aided drug designing
- Figure 2.1 Cell signaling pathway of PDK1
- Figure 2.2 Structure of PDK1 kinase domain (PDB ID: 2BIY)
- Figure 3.1 Chemical structures and activity data (IC_{50} values, nM) of 21 training set molecules Applied for HypoGen pharmacophore generation
- Figure 3.2 Diagrammatic representation of Virtual Screening protocol
- Figure 3.3 (a) Hypo1(best pharmacophore) generated by Hypogen (3D QSAR pharmacophore protocol) ;(b) pharmacophore model with distance between chemical features.
- Figure 3.4(a) Highest active compound (compound_1, IC_{50} = 3.0 nM) mapped in best pharmacophore model; (b) Least active compound (Compound_21, IC_{50} = 65,000) mapped on best pharmacophore model (Hypo1)
- Figure 3.5 Regression plot of 62 test set molecule against Hypo 1
- Figure 3.6 Most active test set compound (compound_22) mapped in best pharmacophore model (Hypo1)
- Figure 3.7 The difference in costs between the Hypogen runs and scrambled runs. The 95% confidence level was selected.
