

LIST OF TABLES

Table No.	Description	Page No.
2.1	Specification of MODIS surface reflectance product (MOD09A1)	38
2.2	Band specification of Landsat-5 satellite data	39
2.3	Band specification of Landsat-8 satellite data	40
2.4	Equations used for the calculation of spectral indices	42
2.5	Land surface emissivity determination using NDVI	45
3.1	Details about the satellite data acquired for the study	52
3.2	Equations used for calculation of the selected indices	55
3.3	The slope, intercept and R^2 determined for intercalibration from MODIS to Landsat equivalent indices for Bikaner and Hyderabad	59
3.4	The slope, intercept and R^2 determined for intercalibration from MODIS to Landsat equivalent indices for Vadodara and Varanasi	60
3.5	LST error statistics of original MODIS LST with reference Landsat LST	61
3.6	LST error statistics of Bikaner and Hyderabad for downscaled LST using different indices	62
3.7	LST error statistics of Vadodara and Varanasi for downscaled LST using different indices	63
3.8	LST error statistics of Bikaner and Hyderabad for different downscaling methods	65
3.9	LST error statistics of Vadodara and Varanasi for different downscaling methods	65
3.10	Similarity assessment of downscaled MODIS LST with original MODIS LST for Bikaner and Hyderabad	66
3.11	Similarity assessment of downscaled MODIS LST with original MODIS LST for Vadodara and Varanasi	67
4.1	Details about the satellite data acquired for the study	78
4.2	Equations used for calculation of the SI	80

4.3	RMSE and the correlation coefficient (R) obtained from the downscaled MODIS-LST and the reference-Landsat-LST for Bikaner and Hyderabad cities. The combinations of spectral indices with best results were reported	86
4.4	RMSE and the correlation coefficient (R) obtained from the downscaled MODIS-LST and the reference-Landsat-LST for Vadodara and Varanasi cities. The combinations of spectral indices with best results were reported	87
4.5	The ratio of the RMSE to the SD determined from the downscaled MODIS-LST image and the reference-Landsat-LST image for best combination. The SD for each reference-Landsat-LST was also reported	88
5.1	Datasets used in the study	101
5.2	The correlation of diurnal LST with combination of variables in Ahmedabad and Gandhinagar obtained from Landsat data for post-monsoon season (31/10/2015 for day time and 01/11/2015 for night time)	113
5.3	The correlation of diurnal LST with combination of variables in Ahmedabad for different seasons i.e. summer, post-monsoon and winter	116
5.4	. The correlation of diurnal LST with combination of variables in Gandhinagar for different seasons i.e. summer, post-monsoon and winter	117
6.1	Satellite data specification	126
6.2	Land Cover Contribution Index (LCCI) for each land covers for the years 1989, 1997, 2008 and 2018	136
7.1	Satellite data specification	145
7.2	Description of five thermal levels	147
7.3	Area within regions showing SUHI effect in winter season for the years 2001, 2007, 2013 and 2019	151
7.4	Area within regions showing SUHI effect in summer season for the years 2001, 2007, 2013 and 2019	152

7.5	Area within regions showings SUHI effect in post-monsoon season for years 2001, 2007, 2013 and 2019	153
7.6	Mean UHI value of regions 4 and 5 for winter, summer and post-monsoon season of the years 2001, 2007, 2013 and 2019	154
