

List of Tables

Table No.	Title	Page
1.1	Some homogeneous/heterogeneous base and acid catalysts for alcoholysis reaction [48-51, 52-54, 55-60, and 61-64]	15
1.2	Potential of tree born non-edible oils in India [86-88]	19
3.1	Produced crude oil and seed cake at lab	59
3.2	Produced biodiesel at lab	68
3.3	Engine specification	71
3.4	Calorific value of different biodiesel (measured)	85
3.5	Density of different biodiesel blends (measured)	85
3.6	Viscosity of different crude oil and biodiesels (measured)	87
3.7	Flash and Fire point of different Biodiesel (measured)	88
3.8	Acid & Iodine values of different biodiesels	89
3.9	Instruments details and its uncertainties	91
5.1	Energy equivalent coefficient of inputs and outputs	123
5.2	Information collected for energy analysis	125
5.3	Plants details, biodiesel conversion efficiency and calorific value	126
5.4	Power consumption in transesterification unit	127
5.5	Energy input and output of different biodiesel plants for 20 year	150
5.6	Energy input and output pattern of different biodiesel plants	153
5.7	Economic equivalents of inputs and output in biodiesel production [263-267]	160
5.8	Economic equivalents of input and output in biodiesel production	162
6.1	Energy input-output ratios in biodiesel production.	198

6.2	Economic analysis of different plants for biodiesel production	199
D.1	Results obtained with the variation of fuel injection timing at engine speed 1500 rpm	268
D.2	Results obtained with the variation of fuel injection timing at engine speed 2000 rpm	269
D.3	Results obtained with the variation of fuel injection timing at engine speed 2500 rpm	270
D.4	Results obtained with the variation of fuel injection timing at engine speed 3000 rpm	271
D.5	Results obtained with the variation of fuel injection timing at engine speed 4000 rpm	272
D.6	Results obtained with the variation of Stroke/Bore ratios at engine speed 1500 rpm	273
D.7	Results obtained with the variation of Stroke/Bore ratios at engine speed 2000 rpm	274
D.8	Results obtained with the variation of Stroke/Bore ratios at engine speed 2500 rpm	275
D.9	Results obtained with the variation of Stroke/Bore ratios at engine speed 3000 rpm	276
D.10	Results obtained with the variation of Stroke/Bore ratios at engine speed 4000 rpm	277
