0.1 Nomenclature xxix

Preface **xxx**

1. Introduction **1**

1.1 Legendre polynomials 1

1.2 Lagrange polynomials 2

1.3 Euler polynomials 3

1.4 Review of ordinary differential equations and partial differential equations 4

1.4.1 Ordinary differential equations 4

1.4.2 Partial differential equations 4

1.5 Operational matrices 5

1.6 Survey of fractional derivatives 7

2. Lagrange Operational Matrix Methods to Lane-Emden, Riccati's and Bessel's Equations **9**

2.1 Introduction 9

2.1.1 Lane-Emden type equation (Type-I) 9

2.1.2 Riccati's equation (Type-II) 11

2.1.3 Bessel's equation (Type-III) 12

2.2 Numerical schemes 13

2.2.1 Construction of basis functions for scheme-I 13

2.2.2 Construction of basis functions for scheme-II 17

2.3 Operational matrices 20

2.3.1 Operational matrices for integration 20

2.3.2 Product operational matrix 23

2.4 Applications of proposed schemes 25

2.4.1 For Lane-Emden equation 25

2.4.2 For Riccati's equation 27

2.4.3 For Bessel's equation 31

2.5 Numerical stability analysis 34

2.5.1 Numerical solution with noise 34

2.6 Numerical examples 35

2.6.1 Examples for Type-I 35

2.6.2 Examples for Type-II 39

2.6.3 Examples for Type-III 42

2.7 Conclusion 46

3. Lagrange's Operational Approach for the Approximate Solution of Two-dimensional Hyperbolic Telegraph Equation Subject to Dirichlet Boundary Conditions 49

3.1 Introduction 49

3.2 Preliminaries: Construction of basis functions and their properties . . 53

3.3 Operational matrices 54

3.4 Numerical method of solution 58

3.5 Numerical experiments 64

3.6 Conclusion 73

4. An Efficient Matrix Approach for Two-dimensional Diffusion and Telegraph Equations with Dirichlet Boundary Conditions 75

4.1 Introduction 75

4.2 Definition and function approximation 77

4.2.1 Definition of Euler polynomials 77

4.2.2 Euler operational matrices 78

4.3 Description of Euler matrix method 80

4.3.1 Description of Euler matrix method for two-dimensional diffusion equations 80

4.3.2 Description of Euler matrix method for solving two-dimensional telegraph equations 88

4.4 Numerical experiments 90

4.5 Conclusion 100

5. Computational Approach Based on Operational Matrix/Finite Difference for Multi-term Fractional Wave Model Arise in Dielectric Medium **101**

5.1 Introduction 101

5.2 Approximation for the fractional order terms 104

5.3 Basis functions and operational matrices 106

5.4 Method of solution for system of differential equations 108

5.5 Convergence analysis in the spatial direction 112

5.6 Stability analysis 116

5.7 Convergence analysis in time direction 120

5.8 Numerical experiments 122

5.9 Conclusion 130

List of Publications **144**
