

# List of Tables

2.1 Unknown coefficient vector for  $N = 2, 3$  and 4 using scheme-I. . . . . 36

2.2 Unknown coefficient vector for  $N = 2, 3$  and 4 using scheme-II. . . . . 36

2.3  $[A^T]_\epsilon$  using scheme-I for  $N = 4$  with noise  $\epsilon_1 = 10^{-2}, \epsilon_2 = 10^{-3}$  and  
 $\epsilon_3 = 10^{-4}$ . . . . . 36

2.4  $[A^T]_\epsilon$  using scheme-II for  $N = 4$  with noise  $\epsilon_1 = 10^{-2}, \epsilon_2 = 10^{-3}$  and  
 $\epsilon_3 = 10^{-4}$ . . . . . 36

2.5  $B_\epsilon^T$  using scheme-I for  $N = 4$  with noise  $\epsilon_1 = 10^{-2}, \epsilon_2 = 10^{-3}$  and  
 $\epsilon_3 = 10^{-4}$ . . . . . 36

2.6  $B_\epsilon^T$  using scheme-II for  $N = 4$  with noise  $\epsilon_1 = 10^{-2}, \epsilon_2 = 10^{-3}$  and  
 $\epsilon_3 = 10^{-4}$ . . . . . 37

2.7 Absolute error for example 2.6.1, with noise  $\epsilon_1 = 10^{-2}, \epsilon_2 = 10^{-3},$   
 $\epsilon_3 = 10^{-4}$  and  $N = 4$ . . . . . 37

2.8 Comparison of numerical solution with existing schemes. . . . . 37

2.9 Comparison of absolute error with existing schemes discussed in [81]  
and [68]. . . . . 38

2.10 Unknown coefficient vector for  $N = 2, 3$  and 4 using scheme-I. . . . . 39

2.11 Unknown coefficient vector for  $N = 2, 3$  and 4 using scheme-II. . . . . 40

2.12  $[A^T]_\epsilon$  using scheme-I for  $N = 4$  with noise  $\epsilon_1 = 10^{-2}, \epsilon_2 = 10^{-3}$  and  
 $\epsilon_3 = 10^{-4}$ . . . . . 40

2.13	$[A^T]_\epsilon$ using scheme-II for $N = 4$ with noise $\epsilon_1 = 10^{-2}, \epsilon_2 = 10^{-3}$ and $\epsilon_3 = 10^{-4}$ . . . . .	40
2.14	$[M_\alpha^T]_\epsilon$ using scheme-I for $N = 4$ with noise $\epsilon_1 = 10^{-2}, \epsilon_2 = 10^{-3}$ and $\epsilon_3 = 10^{-4}$ . . . . .	40
2.15	$[M_\alpha^T]_\epsilon$ using scheme-II for $N = 4$ with noise $\epsilon_1 = 10^{-2}, \epsilon_2 = 10^{-3}$ and $\epsilon_3 = 10^{-4}$ . . . . .	41
2.16	Absolute error for example 2.6.2, with noise $\epsilon_1 = 10^{-2}, \epsilon_2 = 10^{-3}, \epsilon_3 = 10^{-4}$ and $N = 4$ . . . . .	41
2.17	Unknown coefficient vector for $N = 2, 3$ and 4 using scheme-I. . . . .	43
2.18	Unknown coefficient vector for $N = 2, 3$ and 4 using scheme-II. . . . .	43
2.19	$[A^T]_\epsilon$ using scheme-I for $N = 4$ with noise $\epsilon_1 = 10^{-2}, \epsilon_2 = 10^{-3}$ and $\epsilon_3 = 10^{-4}$ . . . . .	43
2.20	$[A^T]_\epsilon$ using scheme-II for $N = 4$ with noise $\epsilon_1 = 10^{-2}, \epsilon_2 = 10^{-3}$ and $\epsilon_3 = 10^{-4}$ . . . . .	44
2.21	$M_1^\epsilon$ using scheme-I for $N = 4$ with noise $\epsilon_1 = 10^{-2}, \epsilon_2 = 10^{-3}$ and $\epsilon_3 = 10^{-4}$ . . . . .	44
2.22	$M_1^\epsilon$ using scheme-II for $N = 4$ with noise $\epsilon_1 = 10^{-2}, \epsilon_2 = 10^{-3}$ and $\epsilon_3 = 10^{-4}$ . . . . .	44
2.23	Absolute error for example 2.6.3, with noise $\epsilon_1 = 10^{-2}, \epsilon_2 = 10^{-3}, \epsilon_3 = 10^{-4}$ and $N = 4$ . . . . .	44
2.24	Comparison of numerical solutions. . . . .	45
3.1	Absolute error $e_N(\nu, \varsigma, 1)$ for values of $N = 3, 4, 5, 6, 7$ and 8 of example 3.5.1 via scheme-I. . . . .	65

3.2	Absolute error $e_N(\nu, \varsigma, 1)$ for values of $N = 3, 4, 5, 6, 7$ and 8 of example 3.5.1 via scheme-II. . . . .	65
3.3	Absolute error $e_N(\nu, \varsigma, 1)$ for values of $N = 3, 4, 5, 6, 7$ and 8 of example 3.5.2 via scheme-I. . . . .	68
3.4	Absolute error $e_N(\nu, \varsigma, 1)$ for values of $N = 3, 4, 5, 6, 7$ and 8 of example 3.5.2 via scheme-II. . . . .	68
3.5	Absolute error $e_N(\nu, \varsigma, 1)$ for values of $N = 3, 4, 5, 6, 7$ and 8 of example 3.5.3 via scheme-I. . . . .	71
3.6	Absolute error $e_N(\nu, \varsigma, 1)$ for values of $N = 3, 4, 5, 6, 7$ and 8 of example 3.5.3 via scheme-II. . . . .	71
3.7	Comparison of absolute errors with Bernoulli matrix method (BMM) [2] for $N = 6$ . . . . .	73
3.8	Comparison of $L_\infty$ -error by scheme-I and scheme-II for $N = 7$ with B-spline differential quadrature method [125] . . . . .	73
4.1	Results of absolute errors $e_N(\xi, \eta, \tau)$ of example 4.4.1. . . . .	91
4.2	Results of absolute errors $e_N(\xi, \eta, \tau)$ of example 4.4.2. . . . .	93
4.3	Results of absolute errors $e_N(\xi, \eta, \tau)$ of example 4.4.3. . . . .	95
4.4	Results of absolute errors $e_N(\xi, \eta, \tau)$ of example 4.4.4. . . . .	97
4.5	Comparison of numerical results of EMM and BMM [1] for example 4.4.1. . . . .	98
4.6	Comparison of numerical results of EMM and BMM [1] for example 4.4.2. . . . .	99
4.7	Comparison of numerical results of EMM and BMM [1] for example 4.4.3. . . . .	99

---

4.8	Comparison of numerical results of EMM and BMM [1] for example 4.4.4. . . . .	100
5.1	$L_2$ -errors for different values of $\alpha$ and $\beta$ , $T = 1$ , $h = 1/60$ , $N = 6$ for example 5.8.1. . . . .	123
5.2	Point wise errors for different values $\alpha$ and $\beta$ , $T = 0.5$ , $h = 1/60$ , $N = 6$ for example 5.8.1. . . . .	124
5.3	Point wise errors for different values $\alpha$ and $\beta$ , $T = 1$ , $h = 1/60$ , $N = 6$ for example 5.8.1. . . . .	124
5.4	$L_2$ -errors for different values of $\alpha$ and $\beta$ , $T = 1$ , $h = 1/60$ , $N = 6$ for example 5.8.2. . . . .	125
5.5	Point wise errors for different values $\alpha$ and $\beta$ , $T = 0.5$ , $h = 1/60$ , $N = 6$ for example 5.8.2. . . . .	126
5.6	Point wise errors for different values $\alpha$ and $\beta$ , $T = 1$ , $h = 1/60$ , $N = 6$ for example 5.8.2. . . . .	126
5.7	$L_2$ -errors and the convergence rate for example 5.8.3 at time $T = 1$ and different values of $\alpha$ and $N = 8$ . . . . .	128
5.8	Comparison of $L_2$ -errors with the method established in [168]. . . . .	128
