

# List of Figures

1.1	Examples of salient objects in images. . . . .	2
2.1	Block diagram for a general automatic image annotation model. . . .	13
3.1	Description of the proposed framework for threshold-based model. . .	67
3.2	Step-wise Result of the threshold-based model. . . . .	69
3.3	Flowchart for the proposed algorithm using active contours and edge cues. . . . .	71
3.4	Visual steps for the edge-based model . . . . .	72
3.5	Visual steps for generating edge-based mask . . . . .	73
3.6	The diagram of the proposed GVF-based algorithm. . . . .	77
3.7	Result obtained at each step of the GVF-based method . . . . .	78
3.8	Visual comparisons of other methods to the proposed method . . . .	79
3.9	MSRA10K Precision Recall Curve. . . . .	80
3.10	MSRA10K ROC Curve. . . . .	80
3.11	PASCAL-S Precision Recall Curve. . . . .	80
3.12	PASCAL-S ROC Curve. . . . .	80
3.13	DUT-OMRON Precision Recall Curve. . . . .	80
3.14	DUT-OMRON ROC Curve. . . . .	80
3.15	Experimental graphs for setting parameter values of edge-based model	83
3.16	MSRA 10 K Precision Recall Curve and ROC Curve. . . . .	83
3.17	PASCAL-S precision Recall Curve and ROC Curve . . . . .	84
3.18	DUT-OMRON Precision Recall Curve and ROC Curve. . . . .	84
3.19	Output of different algorithms for sample images from different dataset.	85
3.20	Comparing the results of salient object detection using only GVF, only MDC, and the proposed algorithm. . . . .	86
3.21	Performance of different algorithms. . . . .	87
3.22	PR-Curves and F-Measure Curves . . . . .	88
3.23	Visual comparison of the outputs of the GVF-based model . . . . .	89
3.24	Visual depiction of scene analysis results. . . . .	90
4.1	Background Saliency Map . . . . .	101
4.2	Dividing an image into four regions with respect to center pixel $n$ . . .	102
4.3	Foreground Saliency Map . . . . .	103

4.4	Image segmentation using Gabor Filters . . . . .	105
4.5	Using objectness to find segments that contain salient object. . . . .	106
4.6	Morphological Operations . . . . .	107
4.7	Boundary Correction . . . . .	108
4.8	Block diagram of the proposed Bayesian classifier based algorithm. . . . .	109
4.9	Outputs obtained at each step of Bayesian classifier model . . . . .	109
4.10	PR-Curves . . . . .	111
4.11	F-Measure Curves . . . . .	112
4.12	Visual comparison of the results of Bayesian classifier model . . . . .	113
4.13	Experimental results of ablation study . . . . .	114
4.14	Result of failure cases . . . . .	115
5.1	Working of Faster R-CNN. . . . .	120
5.2	The residual learning framework used in Resnet 101. . . . .	121
5.3	Bounding Box for the salient object . . . . .	123
5.4	Anchor boxes . . . . .	124
5.5	Block diagram of the proposed deep learning-based model. . . . .	125
5.6	Visual steps for the proposed deep learning model . . . . .	127
5.7	Block diagram of proposed method for colon tumor detection. . . . .	128
5.8	Block diagram of the network. . . . .	129
5.9	Input variants to Faster R-CNN . . . . .	130
5.10	An example of the proposed model. . . . .	131
5.11	Step-wise performance measure for ASD dataset . . . . .	133
5.12	Step-wise performance measure for ECSSD dataset . . . . .	134
5.13	Step-wise performance measure for PASCAL-S dataset . . . . .	134
5.14	Average precision for each type of network . . . . .	139
5.15	Average precision for each type of image in detecting the polyp bounding box . . . . .	140
5.16	Results obtained from ablation study . . . . .	140
5.17	Results obtained from combination study . . . . .	141
5.18	Performance comparison of various combinations based on PR-curves and F-Measure curves . . . . .	142
5.19	Examples of failure cases of proposed model . . . . .	144
6.1	The flowchart depicting the procedure of image annotation. . . . .	158
6.2	Working of LBP. . . . .	159
6.3	TOPSIS method of ranking. . . . .	161
6.4	Performance evaluation graphs . . . . .	167
6.5	Results of Salient object detection . . . . .	168
6.6	Result of increasing $\theta$ in the proposed algorithm. . . . .	169
6.7	Results of the proposed image annotation algorithm . . . . .	175
6.8	Few examples of failure cases of the proposed algorithm. . . . .	176
