LIST OF FIGURES

Figure No.	Description	Page No.
1.1	Atmospheric transmittance	7
1.2	Classification of microwave sensors	13
2.1	Bistatic scatterometer system	39
2.2	Geometry of the illuminated area by the beam on the target surface	42
2.3	Metallic plate used for the measurement of soil surface roughness	49
2.4	The surface roughness profile drawn on the metallic plate using ink marker	49
3.1	Temporal variation of rice crop growth parameters	58
3.2	Temporal variation of σ^0 at X-band for HH-polarization	60
3.3	Temporal variation of σ^0 at X-band for VV-polarization	61
3.4	Temporal variation of σ^0 at X-band for VV-polarization	61
3.5	Temporal variation of σ^0 at C-band for HH-polarization	62
3.6	Temporal variation of σ^0 at C-band for VV-polarization	62
3.7	Temporal variation of σ^0 at C-band for HV-polarization	63
3.8	Temporal variation of σ^0 at L-band for HH-polarization	63
3.9	Temporal variation of σ^0 at L-band for VV-polarization	64
3.10	Temporal variation of σ^0 at L-band for HV-polarization	64
3.11	Membership function plot for HH-polarization at X-band for FBm	67
3.12	Membership function plot for HH-polarization at X-band for LAI	68
3.13	Membership function plot for HH-polarization at X-band for PH	68
3.14	Membership function plot for HH-polarization at X-band for VWC	69
3.15	Fuzzy algorithm performance for the estimation of FBm at 40° angle of	71

	incidence for HH-polarization at X-band for (a) training and (b) testing	
3.16	Fuzzy algorithm performance for the estimation of LAI at 40° angle of incidence for HH-polarization at X-band for (a) training and (b) testing	72
3.17	Fuzzy algorithm performance for the estimation of PH at 40° angle of incidence for HH-polarization at X-band for (a) training and (b) testing	72
3.18	Fuzzy algorithm performance for the estimation of VWC at 40° angle of incidence for HH-polarization at X-band for (a) training and (b) testing	73
4.1	Temporal variation of wheat crop growth parameters	82
4.2	Temporal variation of $\sigma°$ at X-bands for HH- polarization	83
4.3	Temporal variation of $\sigma°$ at X-bands for VV- polarization	83
4.4	Temporal variation of $\sigma°$ at C-bands for HH-polarization	84
4.5	Temporal variation of $\sigma°$ at C-bands VV-polarization	84
4.6	Temporal variation of $\sigma°$ at L-bands for HH-polarization	85
4.7	Temporal variation of $\sigma°$ at L-bands for VV-polarization	85
4.8	Membership function plot at C-band for HH-polarization	89
4.9	Fuzzy algorithm performance for the estimation of FBm at 40° angle of incidence for HH-polarization at C-band for (a) training and (b) testing	89
4.10	Fuzzy algorithm performance for the estimation of LAI at 40° angle of incidence for HH-polarization at C-band for (a) training and (b) testing	90
4.11	Fuzzy algorithm performance for the estimation of PH at 40° angle of incidence for HH-polarization at C-band for (a) training and (b) testing	90
4.12	Fuzzy algorithm performance for the estimation of VWC at 40° angle of incidence for HH-polarization at C-band for (a) training and (b) testing	91
5.1	Architecture of S-ANFIS	98
5.2	Temporal variation of crop growth parameters	99

5.3	Temporal variation of bistatic specular scattering coefficient at X-band for HH- polarization	100
5.4	Temporal variation of bistatic specular scattering coefficient at X-band VV- for polarization	100
5.5	Membership function plot for FBm at X-band for VV-polarization	104
5.6	Membership function plot for LAI at X-band for VV-polarization	105
5.7	Membership function plot for PH at X-band for VV-polarization	105
5.8	Membership function plot for VWC at X-band for VV-polarization	106
5.9	S-ANFIS performance for the estimation of FBm at 40° angle of incidence for VV-polarization at X-band for (a) training and (b) testing	107
5.10	S-ANFIS performance for the estimation of LAI at 40° angle of incidence for VV-polarization at X-band for (a) training and (b) testing	107
5.11	S-ANFIS performance for the estimation of LAI at 40° angle of incidence for VV-polarization at X-band for (a) training and (b) testing	108
5.12	S-ANFIS performance for the estimation of LAI at 40° angle of incidence for VV-polarization at X-band for (a) training and (b) testing	108
6.1	Angular variation of scattering coefficient at different soil moisture for HH-polarization at L-band	117
6.2	Angular variation of scattering coefficient at different soil moisture for VV-polarization at L-band	118
6.3	Angular variation of *P* (dB) at different soil moisture content	118
6.4	Membership function plot for tri MF with *P* (dB)	121
6.5	Membership function plot for Gauss MF with *P* (dB)	121
6.6	Membership function plot for gbell MF with *P* (dB)	122
6.7	Plot between experimentally observed and estimated soil moisture for	122

tri MF during (a) training and (b) testing of G-ANFIS algorithm

6.8 Plot between experimentally observed and estimated soil moisture for Gauss MF during (a) training and (b) testing of G-ANFIS algorithm 123

6.9 Plot between experimentally observed and estimated soil moisture for gbell MF during (a) training and (b) testing of G-ANFIS algorithm 123
