LIST OF FIGURES

Figure 1. 1: Dragline 8200 model in mine.....2

Figure 1. 2**:** Main component of a dragline (Modified from Karpuz and Demirel,2016).....3

Figure 1. 3: A large dragline bucket 4

Figure 1. 4: Bucket assembly and their parts (a) Mains parts (b) Cast lip and teeth (Dragline Dictionary Edition, 2014).....5

Figure 2. 1: Dragline in a coal mine (Anonymous, 2008) 11

Figure 2. 2: Economic comparison of a truck shovel and dragline (Hartman, 2002).....12

Figure 2. 3:Center of gravity of an arch type dragline bucket (Dragline Dictionary,2014) 15

Figure 2. 4: Dragline kinematics (a) Dragline Front-End Assembly (b) Vector Loop Presentation (Modified after Demirel, 2007).....16

Figure 2. 5: Dragline bucket and rigging mechanism(Modified after Ridley, 2004) 17

Figure 2. 6: Shear zone theory at different displacements (Coetzee, 2007) 20

Figure 2. 7: Dragline layout showing constant carry angle contours (Ridley, 2004).....21

Figure 2. 8: Dragline bucket teeth (a) Single Part (b) Double Part 22

Figure 2. 9: Forces affecting the bucket during normal bench digging(Ozdogan,2015).....24

Figure 2. 10: Time vs hoist current - swing voltage signals of empty bucket digging cycle, Ozdogan (2002). 25

Figure 2. 11: The perfect carry angle of a dragline bucket (Beatty, 1996).....25

Figure 2. 12: FEA (a) Meshing (b) Stress Distribution(Abo-Elnor et al. 2004).....31

Figure 2. 13: Penetration and separation parts of a bucket.....33

Figure 2. 14: Fundamental earthmoving actions for a shovel (Modified after Blouin, 2001) 34

Figure 2. 15: Dragline bucket earthmoving actions (Ozdogan, 2003).....34

Figure 2. 16: Failure plane in formation cutting (Blouin et al., 2001).....36

Figure 2.17: Yield surface corresponding to the Von Mises yield criterion (Hearn,1997)..... 42

Figure 2. 18: ERS dipper rake and tooth angle, (Anon. a, 2009)..... 43

Figure 2. 19: Starting rake angle reference angle ranges to adjust ERS rake angle (Data Anon a, 2009)..... 43
