## LIST OF TABLES

---

---

<b>Table 1.1:</b> Chemical compositions of super austenitic stainless steels.	4
<b>Table 1.2:</b> Applications of super austenitic stainless steels.	4
<b>Table 1.3:</b> Tensile properties of 904L SASS at elevated temperature.	6
<b>Table 2.1:</b> Chemical composition of the super austenitic stainless steel 904L in wt%.	25
<b>Table 2.2:</b> Composition of the salt mixtures.	28
<b>Table 3.1:</b> Parabolic rate constant of the SASS 904L, oxidized at 500-650 °C, up to 100 h.	35
<b>Table 3.2:</b> Oxide phases formed on the SASS 904L, from exposure at 500- 650°C for 100 h in air.	36
<b>Table 3.3:</b> Standard Gibbs free energy of formation of different oxides.	46
<b>Table 4.1:</b> The phases formed from oxidation at different temperatures during different exposures detected by XRD and Raman spectra.	50
<b>Table 5.1:</b> Parabolic rate constants for the samples hot corroded with SM1 and SM2 salt mixtures from 500-650 °C, up to 100 h.	68
<b>Table 5.2:</b> Various phases and compounds formed from hot corrosion of 904L steel, by SM1 and SM2 salt mixtures, exposed from 500 to 650 ° C, up to 100 h.	71
<b>Table 5.3:</b> Possible oxidation/corrosion reactions and their products formed from hot corrosion of the 904L steel, by SM1 and SM2, from 500 °C to 650 °C.	72
<b>Table 5.4:</b> Melting temperatures of different salts and eutectic temperatures of different salt mixtures.	83
<b>Table 5.5:</b> Depth of attack on the samples, coated with salt mixtures SM1 and SM2, exposed at 650 °C, up to 100 h.	83
<b>Table 5.6:</b> Calculated values of Gibbs free energy (kJ/mole) for the different phases resulting from corrosion by SM1 and SM2, from 100 h of exposure at 500-650 °C.	90

<b>Table 6.1:</b> Weight gain per unit area ( $\Delta W$ ) and kinetic rate values of isothermally exposed samples at 500-650 °C, from 25-100 h under SM1 and SM2 salt coated environment.	<b>96</b>
<b>Table 6.2:</b> Phases formed after isothermal exposure of the SASS 904L at 500-650 °C from 25-100 h, in SM1 and SM2 salt environment.	<b>98</b>
<b>Table 7.1:</b> Comparison of cyclic and isothermal oxidation of important structural materials.	<b>114</b>
<b>Table 7.2:</b> Comparison of results obtained from cyclic and isothermal exposures.	<b>122</b>
