TITLE OF THESIS	i
CERTIFICATE	ii
DECLARATION BY THE CANDIDATE & CERTIFICATE BY THE SUPERVISOR	iii
COPYRIGHT TRANSFER CERTIFICATE	iv
Dedication	v
Acknowledgement	vi-vii
Contents	viii-xvii
List of Figures	xviii-xxix
List of Schemes	xxx
List of Tables	xxxii
List of Symbols/Abbreviations	xxxii-xxxiv
Preface	xxxv-xlii
<b>CHAPTER 1: Introduction and literature review</b>	<b>1-43</b>
1.1 Schiff bases	1
1.2 Chemistry of Schiff's bases	1
1.3 Structure	2
1.4 Types of Schiff base	5
1.4.1 Salen and Salophen type	6
1.4.2 Hydrazone type	6
1.5 Schiff's base ligands	7
1.5.1 Schiff's base metal complexes	7

---

1.6	Applications of Schiff base metal complexes	9
1.6.1	As electroluminescent materials	9
1.6.2	In non-linear optical devices	10
1.6.3	In electrochemical sensors	12
1.6.4	In medicinal chemistry	13
1.6.4.1	Antibacterial properties	14
1.6.4.1.1	Chelation theory	16
1.6.4.2	Antifungal properties	19
1.6.4.3	Biocidal properties	20
1.6.4.4	Antiviral properties	20
1.6.4.5	Antimalarial activity	21
1.6.4.6	Therapeutic applications	22
1.6.4.7	Industrial applications	23
1.6.4.8	Agricultural applications	23
1.6.4.9	Application as catalysts	24
1.6.4.10	Applications in analytical chemistry	25
1.6.4.11	Photometric method of analysis	25
1.6.4.12	Fluorometry in analysis	26
1.6.4.13	Potentiometric sensors	26
1.6.4.14	Schiff base as solvent extractant	27
1.6.4.15	Schiff bases and gels	27
1.6.4.15.1	Definition and Classification of gels	29
1.6.4.15.2	Classification of gel	31
1.6.4.15.3	Definition of supramolecular metallogels	34
1.6.4.16	Luminescent Studies	35
1.6.4.16.1	Aggregation caused Quenching and Emission	36
1.7	Research Objectives	40

---

<b>Chapter 2:</b>	<b>44-78</b>	
<b>Materials and Methods</b>		
2.1	List of Chemicals	44
2.2	Experimental Methodology	46
2.3	Synthesis of ligands and metallogels	46
2.3.1	Synthesis of ligands	46
2.3.2	Synthesis of metallogels	46
2.3.3	Synthesis of aggregates	46
2.4	Characterization of metallogels	46
2.4.1	IR spectroscopy	46
2.4.2	Elemental analysis	49
2.4.2.1	Basic Principle	49
2.4.3	NMR spectroscopy	50
2.4.3.1	Relaxation processes	52
2.4.3.2	Spin - lattice relaxation	52
2.4.3.3	Spin - spin relaxation	53
2.4.3.4	Chemical shift	53
2.4.4	Thermogravimetric Analysis	54
2.4.4.1	Basic Principle	55
2.4.5	Powder X-ray diffraction (PXRD)	56
2.4.5.1	Basic Principle	57
2.4.6	UV-vis Spectroscopy	58
2.4.6.1	Basic Principle	60

---

2.4.7	Fluorescence spectroscopy	61
2.4.7.1	Basic Principle	61
2.4.8	Transmission Electron Microscopy (TEM)	64
2.4.8.1	Basic Principle	64
2.4.9	Scanning electron microscope (SEM)	66
2.4.9.1	Principles and capacities	67
2.4.9.2	Sample preparation	68
2.4.10	X-ray crystallography (XRC)	69
2.4.10.1	Basic Principle	70
2.4.11	Atomic force microscopy (AFM)	71
2.4.11.1	Basic Principle	71
2.4.12	Characterization methods for gels	73
2.4.12.1	Temporal stability	73
2.4.12.2	Thermal stability	74
2.4.12.3	Fourier transform infrared spectroscopy	74
2.4.12.4	Temperature-dependent $^1\text{H}$ NMR spectroscopy	74
2.4.12.5	Morphological characterization	75
2.4.12.6	Rheological properties	76
2.4.12.7	Responsiveness to stimuli	77
<b>Chapter 3:</b>		<b>79-134</b>
<b>Schiff base derived multi-stimuli responsive conductive sonometallogel: a mechanistic insight into role of ultrasound in gelation</b>		
3.1	Introduction	79

---

---

3.2	Instrumentation	81
3.2.1	Calibration of ultrasonic bath	82
3.2.2	Rheological Study	83
3.2.3	Conductance Study	83
3.3	Synthesis of Intermediate and Isomers 1 & 2	84
3.3.1	Synthesis of CAHN	84
3.3.2	Synthesis of Isomer 1	85
3.3.3	Synthesis of Isomer 2	85
3.3.4	Synthesis of 1/Li+/Cd(II) (non-sonicated) complex	86
3.3.5	Synthesis of 1/Li+/Zn(II) complex	86
3.3.6	Synthesis of metallogel (C2)	87
3.4	Result and discussion	88
3.4.1	NMR Characterization	89
3.4.2	ESI Mass Characterization	90
3.4.3	Studies on Conformational isomers	91
3.4.4	Schematic representation of formation of gel step by step	95
3.4.5	Physical properties of metallogel	96
3.4.6	Change in gelation behavior of Isomer 1 and 2	98
3.4.7	TEM Images before and After Sonication	99
3.4.7.1	Change in morphology upon sonication (visible through TEM)	100
3.4.8	Atomic Force Microscopy	101
3.4.9	UV-visible spectroscopy of Isomer 1 with various metals	102

---

3.4.10	Emission studies	110
3.4.11	Structural Changes in Isomer 1 upon metal addition	117
3.4.12	IR spectroscopy of Complexation	118
3.4.13	ESI-MS spectra of Isomer 1 and Metallogel along with complexation mode by Job's plot	119
3.4.14	Comparison of bonding mode for Isomer 1 in both combinations of metal	121
3.4.15	PXRD analysis of Metallogel, before and after sonication	124
3.4.16	Thermogravimetric analysis	125
3.4.17	Rheology	126
3.4.18	Conductance study	128
3.4.19	NMR titration	130
3.4.20	Mechanism of formation of metallogel	132
3.5	Conclusion	134
<b>Chapter 4:</b>		<b>135-188</b>
<b>Coordination polymeric fluorescent metallogel: Effect of spacer length variation over gelation properties</b>		
4.1	Introduction	135
4.2	Synthesis	137
4.2.1	Synthesis of Bis(acylhydrazones) (BHN; n=4)	137
4.2.2	Synthesis of AL	138
4.2.3	Synthesis of OL	138
4.2.4	Synthesis of ML	139
4.2.5	Synthesis of SL	139
4.2.6	Synthesis of GL	139

---

4.2.7	Synthesis of PL	140
4.2.8	Synthesis of SUL	140
4.2.9	Synthesis and Characterization of APL	141
4.3	Instrumentation	144
4.3.1	UV-vis Study	145
4.3.2	Fluorescence Study	145
4.3.3	Rheological Study	146
4.3.4	NMR study	147
4.3.5	Mechanical Properties of gel	150
4.3.6	Degree of Freedom	151
4.3.7	Gelation behavior and visible optical properties	152
4.3.8	Solid State Fluorescence	153
4.3.9	Morphology	154
4.3.10	PXRD	155
4.3.11	UV-vis Spectroscopy	156
4.3.11.1	Supporting UV-vis Spectroscopy	162
4.3.12	Fluorescence Spectroscopy	164
4.3.13	IR spectrum of H <sub>4</sub> AL and Metallogel	171
4.3.14	comparative ESI mass spectrum of gelator and metallogel	175
4.3.15	Lifetime study of various gelator and non-gelling combination	179
4.3.16	Binding mode obtained from Job's plot and ESI mass spectra	181
4.3.17	TGA analysis	182

4.3.18	Rheological experiment	183
4.3.19	plausible mechanism	187
4.4	Conclusion	187
<b>Chapter 5:</b>		<b>189-213</b>
<b>A Schiff base derived supramolecular Co(II)-metallogel: an efficient semiconductive electronic device</b>		
5.1	Introduction	189
5.2	Instrumentation	191
5.3	Experimental Section	192
5.3.1	Method	192
5.3.1.1	Synthesis of Gelator SHAL	192
5.3.2	Synthetic Scheme of Gelator	193
5.3.3	Preparation of metallogel	193
5.4	Results and Discussion	194
5.4.1	Characterization	194
5.4.2	<sup>1</sup> H-NMR and IR spectrum of gelator	194
5.4.3	Comparative IR of gelator and metallogel	195
5.4.4	Mechanical Properties of metallogel	196
5.4.5	Morphology of Metallogel	197
5.4.6	UV-vis Spectroscopy	199
5.4.7	Emission Spectroscopy	201
5.4.8	ESI Mass analysis of metallogel	202
5.4.9	Rheology	203
5.4.10	Optical characterization	206
5.4.11	Electrical Characterization	207

5.4.12	Investigation of photo-response	211
5.5	Conclusion	212
<b>Chapter 6:</b>		<b>214-237</b>
<b>Pyrene Schiff based derived AIE-active hybrid fluorophore material for potential live cell imaging applications.</b>		
6.1	Introduction	214
6.2	experimental section	216
6.2.1	Method	216
6.2.1.1	Synthesis of PRU and PRT	216
6.2.2	Preparation of aggregates	217
6.2.3	Cell imaging methods	217
6.2.3.1	Cell culture	217
6.2.3.2	Cell viability assay	217
6.2.3.3	Cell imaging	218
6.2.4	Instrumentation	217
6.3	Synthesis of Compounds	219
6.3.1	Characterization	220
6.3.1.1	<sup>1</sup> H NMR of PRT	220
6.3.2	Optical properties of PRT	221
6.3.2.1	UV-vis study	221
6.3.2.2	Emission study	222
6.3.3	SEM and AFM analysis of aggregate	225
6.3.3.1	SEM images	226
6.3.3.2	AFM images	229
6.3.4	PXRD analysis of PRT and aggregate	230

6.3.5	NMR Titration	<b>231</b>
6.4	Application of PRT/PRU	<b>231</b>
6.4.1	Cell viability of PRT	<b>232</b>
6.4.2	Cell Imaging	<b>234</b>
6.5	Conclusion	<b>235</b>
<hr/>		
	Summary	<b>238-242</b>
	Future Recommendations	<b>243</b>
	References	<b>244-267</b>
	List of Publications	<b>268-269</b>
