

List of Figures

Figure 1.1 Energy demand (in Joule) and its consumption [Source: maritime executive.com]	3
Figure 1.2 Conductivity of some solid electrolyte oxides for SOFCs [12].....	8
Figure 1.3 Working principle of unit cell of solid oxide fuel cell (SOFC) and proton conducting fuel cell (PCFC) [Ref: researchgate.net].....	9
Figure 1.4 (a) The major sources of ionic carriers in oxides and their respective mobilities compiled from literatures (b) The correlation of composition, microstructure, processing and electrical conductivity in polycrystalline materials under given temperature and surrounding atmosphere [24].	16
Figure 1.5 A schematic representation of the conductivity behaviour of oxide ion conductor.	18
Figure 1.6 Perovskite structure ABO_3 and octahedron BO_6	20
Figure 1.7 Formation of proton and migration mechanism in the ABO_3 perovskite structure.....	31
Figure 1.8 Hydration enthalpy vs difference in Rochow-Allred electronegativities between B- and A-site constituents in perovskites [17].	35
Figure 1.9 The trace of a proton in a perovskite showing the two principal features of proton transport: rotational diffusion and proton transfer [109].	37
Figure 1.10 Schematic diagram of potential barrier for a proton (or deuteron) transfer reaction as a function of the configurational coordinate of the hopping atom [112.].....	39
Figure 1.11 Perovskite structure of $SrCeO_3$	45
Figure 1.12 Partial proton conductivity vs. $1/T$ for bulk of selected perovskites at $P(H_2O) = 0.03$ atm, calculated on basis of proton mobility and hydration thermodynamics parameters [17].	45

Figure 2.1 Working Principle of Lab Planetary Ball-Miller.	57
Figure 2.2 Flow chart of auto combustion synthesis.	60
Figure 2.3 Schematic representation of mechanical alloying method.	61
Figure 2.4 TGA-DSC facility. Figure 2.5 A typical non-isothermal TGA-DSC Curve	64
Figure 2.6 Balance with density kit [Sartorius, BSA2245CW]	65
Figure 2.7 Visualization of Bragg’s law.	66
Figure 2.8 Schematic representation of $\theta/2\theta$ diffraction in Bragg-Brentano geometry.	67
Figure 2.9 XRD facilities, Central Instrument Facility (CIF) IIT (BHU).....	68
Figure 2.10 A typical FullProf software interface during Rietveld refinement process.	71
Figure 2.11 Experimental set-up used for Raman Measurement (CRF IIT Kharagpur).	77
Figure 2.12 Schematic presentation of the principle of Raman Spectroscopy	78
Figure 2.13 Principle of FT-IR spectroscopy and experimental set-up for FTIR measurement facility.	79
Figure 2.14 Interaction of electron beam with sample specimen	81
Figure 2.15 The Schematic view of a Transmission Electron Microscope (TEM).	81
Figure 2.16 (a) TEM facility at IIT-BHU (b) TEM grid for measurement (c) HR-TEM image of sample (d) Distribution function for spherical grains.	83
Figure 2.17 FESEM facilities, IIT (BHU).	84
Figure 2.18 (a) Mechanism of X-ray Photoelectron Spectroscopy (b) Experimental set-up for XPS measurement.	86
Figure 2.19 Experimental Set-up for UV-Vis measurement (IIT BHU).	88
Figure 2.20 Tauc plot generated by Eq. 2.23.	89
Figure 2.21 (a) Principle of photoluminescence spectroscopy (b) Experimental set-up used in the present investigation.	90

Figure 2.22 Experimental Set-up used for Electrical Characterization of sample (IIT BHU).	91
Figure 2.23 Equivalent circuit for polycrystalline ceramic sample and their frequency response in complex Impedance plot.	95
Figure 2.24 Equivalent circuit for polycrystalline ceramic sample and corresponding frequency response in the complex Modulus plots.	96
Figure 2.25 Conductivity spectra of a polycrystalline material.	99
Figure 3.1 TGA-DSC curve of stoichiometric mixture of raw materials (SrCO_3 and CeO_2) for SrCeO_3	105
Figure 3.2 (a) XRD pattern of calcined powder and (b) Rietveld refinement profiles of sintered powder of SrCeO_3	106
Figure 3.3 (a) JCPDS cards for SrCeO_3 & Sr_2CeO_4 and (b)-(c) Raman spectra for SrCeO_3 & Sr_2CeO_4 respectively.	106
Figure 3.4 (a) SEM micrograph (b) EDX spectrum of fractured surface of sintered pellet.	109
Figure 3.5 Complex plane impedance plots (Nyquist plots of the sample).	110
Figure 3.6 Variation of imaginary part of impedance (Z'') with logarithm of frequency at different temperatures. FWHM represents the value of the full width at half-maxima.	112
Figure 3.7 Variation of logarithm of R with inverse of temperature.	114
Figure 3.8 Variation of logarithm of relaxation time of grain with inverse of temperature.	115
Figure 3.9 Variation of logarithm of DC conductivity (σ_{dc}) with inverse of temperature.	116
Figure 3.10 Emission spectrum of sintered sample.	118
Figure 4.1 Thermo gravimetric analysis (TGA) and differential scanning calorimetric (DSC) curve of raw materials and mixture.	125
Figure 4.2 (a) Room temperature X-ray diffraction (XRD) and (b) magnified view of (112) peak of the samples.	128

Figure 4.3 (a) Rietveld refinement XRD profile of the samples and (b) Crystal structure of the sample SCN4 ($x=0.04$) obtained using VESTA.	130
Figure 4.4 Size strain plots (SSP) for the determination of crystallite size and lattice strain of samples.....	132
Figure 4.5 (a) Room temperature Raman spectra of all samples and (b) Variation of intensity and full width at half maxima with concentration of dopant Na (x).....	134
Figure 4.6 Fourier Transform Infra-red (FTIR) spectra of the samples.....	136
Figure 4.7 Room temperature UV-visible absorption spectra of the samples.	137
Figure 4.8 (a) Tauc plots obtained from the absorption data of the samples (b) Proposed change in the optical band gap of SrCeO ₃ on Na doping.	138
Figure 4.9 Scanning electron micrographs (SEM) of fractured surfaces of the samples and EDXA spectrum of SCN6.....	141
Figure 4.10 Histograms of the distribution of grain size of the samples.	142
Figure 4.11 The complex plane impedance plots at different temperatures for the composition SCN10.....	143
Figure 4.12 The complex plane impedance plots for compositions: (a) SCN0 (b) SCN2, (c) SCN4 (d) SCN6 (e) SCN10 for SrCe _{1-x} Na _x O ₃ ($0.00 \leq x \leq 0.10$): at 460 °C.	144
Figure 4.13 DC conductivity for various compositions SCN0, SCN2, SCN4, SCN6 and SCN10 of the system SrCe _{1-x} Na _x O ₃	147
Figure 4.14 (a) Deconvoluted XPS of Ce 3d profile of sample SrCe _{0.96} Na _{0.04} O ₃ (SCN4) (b) Deconvoluted XPS of O 1s profile.....	150
Figure 5.1 (a) Room temperature powder X-ray diffraction (XRD) and (b) magnified view of (112) peak of the samples.	158
Figure 5.2 Rietveld refinement of X-ray diffraction pattern of samples in the system SrCe _{1-x} Gd _x O ₄	159

Figure 5.3 Size Strain plots (SSP) for determination of crystalline size and lattice strain of the samples.....	162
Figure 5.4 Room temperature Raman spectra of all prepared samples.	165
Figure 5.5 Fourier transformed infra-red (FTIR) spectra of all prepared samples.	167
Figure 5.6 Thermo gravimetric analysis (TGA) and differential scanning calorimetric (DSC) curves.	168
Figure 5.7 (a) UV- visible absorption spectra and (b) Tau plots received from the absorption data of the prepared system $\text{SrCe}_{1-x}\text{Gd}_x\text{O}_3$ ($0.00 \leq x \leq 0.10$).....	170
Figure 5.8 Scanning electron micrograph (SEM) of fractured surfaces and EDX spectrum.	173
Figure 5.9 Histograms of distribution in grain size of the samples.	174
Figure 5.10 The complex plane impedance plots for the composition SCG6: (a) 300 °C, (b) 360 ° C, (c) 400 °C, (d) 460 °C, (e) 560 °C and (f) 600 °C.....	176
Figure 5.11 The complex plane impedance plots for compositions: (a) SCG0 (b) SCG2, (c) SCG4 (d) SCG6 (e) SCG10 and (f) combined plot for $\text{SrCe}_{1-x}\text{Gd}_x\text{O}_3$ ($0.00 \leq x \leq 0.10$): at 460 °C.	177
Figure 5.12 Bulk conductivity of the samples in the system $\text{SrCe}_{1-x}\text{Gd}_x\text{O}_3$	179
Figure 5.13 (a) Deconvoluted XPS of Ce 3d profile (b) of O 1s profile of sample $\text{SrCe}_{0.96}\text{Gd}_{0.04}\text{O}_3$ (SCG4).....	181
Figure 6.1 Thermo gravimetric analysis (TGA) and differential scanning calorimetric (DSC) curves.	188
Figure 6.2 Room temperature powder X-ray diffraction pattern of all samples.....	189
Figure 6.3 Rietveld refinement of X-ray diffraction the system $\text{SrCe}_{1-x}\text{La}_x\text{O}_3$	190
Figure 6.4 Size Strain plots (SSP) for determination of crystalline size and lattice strain of the samples.....	192

Figure 6.5 Room temperature Raman spectrum of the prepared samples.	195
Figure 6.6 Fourier transformed infra-red (FTIR) spectra of all prepared samples.	196
Figure 6.7 (a) UV- visible absorption spectra and (b) Tau plots received from the absorption data of the prepared system $\text{SrCe}_{1-x}\text{La}_x\text{O}_3$ ($0.00 \leq x \leq 0.10$).	198
Figure 6.8 Scanning electron micrograph (SEM) of fractured surfaces of the prepared samples & EDXA spectrum of SCL6.	200
Figure 6.9 Histograms grain size distribution of the samples.	201
Figure 6.10 (a) Transmission electron micrograph of a representative sample SCL10, (b) Distribution function fitted with Gaussian Function and (c) Selected Area Electron Diffraction (SAED) pattern.	202
Figure 6.11 Complex plane Impedance plots for the sample SCL2 at (a) 300 °C (b) 350 °C (c) 400 °C (d) 450 °C (e) 500 °C and (f) 600 °C	204
Figure 6.12 The complex plane impedance plots for compositions: (a) SCL0 (b) SCL2, (c) SCL4 and (d) SCL6 and (e) SCL10 (f) combined plot for $\text{SrCe}_{1-x}\text{La}_x\text{O}_3$ ($0.00 \leq x \leq 0.10$): at 600 °C.	205
Figure 6.13 DC conductivity of all composition SCL0, SCL2, SCL4, SCL6 and SCL10 for system $\text{SrCe}_{1-x}\text{La}_x\text{O}_3$ ($0.00 \leq x \leq 0.10$).	206
Figure 6.14 (a) Deconvoluted XPS of O 1s profile (b) Deconvoluted XPS of Ce 3d profile of sample $\text{SrCe}_{0.96}\text{La}_{0.04}\text{O}_3$ (SCL4).	207
