List of tables	xxiii
List of abbreviations	xxiv
Preface	xxvii

Chapter 1: Introduction

1.1 Nanocarbon Family Allotropes.....	1
1.2 Graphene.....	3
1.3 Graphene Oxide.....	6
1.4 Carbon Quantum Dots.....	8
1.4.1 Type of Luminescence.....	10
1.4.2 Synthesis Methods.....	11
1.4.3 CQD Modification.....	15
1.4.4 Photoluminescence mechanism.....	17
1.4.5 Biological Applications.....	18
1.4.6 Optoelectronic Applications.....	21
1.4.7 Catalysis Applications.....	23
1.4.8 Chemical Sensing.....	23
1.4.9 Challenges with CQDs.....	24
1.5 Literature Review.....	24
1.6 References.....	29

Chapter 2: Methodology and Instrumentation

2.1 Materials Used for the Synthesis and Other Experiments of CQDs....	41
2.2 Preparation of CQDs.....	41
2.2.1 <i>Tulsi</i> -derived CQDs.....	41
2.2.2 <i>Arjuna-terminalia</i> derived CQDs.....	42
2.2.3 Sandalwood-Derived CQDs.....	42
2.2.4 Marigold-derived CQDs.....	43
2.3 Apparatus Used for the Experiments.....	44
2.4 Fluorescence Quantum Yield.....	46
2.5 Experiments Related to <i>Tulsi</i> -derived CQDs for Sensing Malachite Green.....	46
2.5.1 Free Radical Scavenging Activity.....	46
2.5.2 Antibacterial Assay.....	47
2.5.3 Antifungal Assay.....	49
2.5.4 Sensing of Malachite Green Using CQDs.....	49
2.5.5 Details of Computational Analysis Methodology.....	50
2.5.6 Detection of Malachite Green in Aquaculture.....	50
2.5.7 Detection of Malachite Green in Green Leafy Vegetables.....	51
2.5.8 Biosensor Design for Easy Colorimetric Detection of Malachite Green.....	51
2.6 Experiments Related to <i>Arjuna terminalia</i> -derived CQDs for the Synthesis of Gold Nanoparticles.....	52

2.6.1 Preparation of AuNPs.....	52
2.6.2 MTT Assay.....	52
2.6.3 Computational Studies of AuNP-CQD Interaction.....	53
2.6.4 Collagen Stabilisation of AuNPs.....	53
2.6.5 Snowing of AuNPs by β -mercaptoethanol.....	54
2.7 Experiments Related to Sandalwood-derived CQDs for the Bioimaging of the Adverse Effects of Malachite Green on Plant and Animal Models.....	54
2.7.1 Mung Bean Sprout Cultivation.....	54
2.7.2 Mung Bean Sprout Characterization.....	55
2.7.3 Onion Cell Analysis.....	55
2.7.4 Cell Culture.....	55
2.7.5 Cell Viability Test.....	56
2.7.6 Animal Ethical Treatment.....	56
2.7.7 Animal Sample Collection and Morphometric analysis.....	57
2.7.8 Colorimetric Analysis of Reactive Oxygen Species (ROS) Assay..	58
2.7.9 Colorimetric Analysis of Superoxide dismutase Assay (SOD).....	58
2.7.10 Colorimetric Analysis of Lipid Peroxidation Assay (LPO)....	58
2.7.11 Cellular and Tissue Uptake Studies by Confocal and Fluorescence Microscopy.....	59
2.7.12 Statistical Analysis.....	59
2.8 Experiments Related to the Self-Assembly of Amino Acids/Peptides/Proteins and GO.....	59
2.8.1 Interaction of Amino Acids/Peptides/Proteins with GO.....	59
2.8.2 Gel Electrophoresis Procedure.....	60
2.9 Experiments Related to the Marigold-derived CQDs for the Detection of Adulterant Dyes.....	61
2.9.1 Complexation of Malachite Green with G-Quadruplex DNA sequences.....	61
2.9.2 Construction of a Multi-Detection Device for the Sensitive Sensing of Common Food Adulterants using CQDs as Tools.....	62
2.10 References.....	62

Chapter 3: Label-Free Fluorometric Detection of Adulterant Malachite Green Using Carbon Dots Derived from the Medicinal Plant Source *Ocimum tenuiflorum*

3.1 Introduction.....	65
3.1.1 Malachite Green: A Common Food Adulterant with Harmful Effects.....	65
3.1.2 Detection of Malachite Green.....	66
3.1.3 Use of Fluorescent Probes for Detection of Analyte.....	67
3.1.4 Carbon Quantum Dots as Fluorescent Probes.....	67
3.1.5 Methods of Synthesis of CQDs.....	68
3.1.6 Choice of Carbon Precursor for CQD Synthesis: <i>Ocimum tenuiflorum</i> or Tulsi.....	68
3.2 Results and Discussions.....	70
3.2.1 Morphology and Surface Properties of Carbon Quantum Dots.....	70
3.2.2 Elucidation of Surface Functional Groups of CQDs through FTIR and XPS.....	71

3.2.3 XRD Profile of CQDs.....	73
3.2.4 CQD Stability in Various Conditions.....	74
3.2.5 Optical Properties of Carbon Quantum Dots.....	76
3.2.6 <i>In vitro</i> antioxidative assay of the Synthesized CQDs.....	79
3.2.7 Cell Viability Bioassay of Carbon Quantum Dots.....	80
3.2.8 Toxicological detection strategy for Malachite Green using fluorescence.....	82
3.2.9 Computational Studies for Understanding the Interaction between the CQD Surface and Malachite Green.....	85
3.2.10 Analysis of Real Aquaculture Samples for the Presence of Malachite Green.....	87
3.2.11 Analysis of Green Plant Leaves for the Detection of Malachite Green Traces by CQDs.....	89
3.2.12 Calorimetric Sensor Design.....	90
3.3 Conclusions.....	91
3.4 References.....	92

Chapter 4: Understanding the *In Situ* Mechanistic Control of Plant-Derived Carbon Quantum Dots on the Synthesis of Gold Nanoparticles

4.1 Introduction.....	101
4.1.1 Brief Introduction to Gold Nanoparticles.....	101
4.1.2 Synthesis and Biological Applications of Gold Nanoparticles.....	102
4.1.3 Combining the Optical Properties of Both Gold Nanoparticles and CQDs.....	103
4.1.4 Use of <i>Arjuna terminalia</i> as the carbon precursor for the synthesis of CQDs and gold nanoparticles.....	104
4.2 Results and Discussions.....	105
4.2.1 Characterisation of the Four Variants of CQDs.....	105
4.2.2 Synthesis and Growth of AuNPs.....	110
4.2.3 Morphology and Structural Elucidation of AuNPs.....	116
4.2.4 Detailed Characterisation of AuNPs.....	121
4.2.5 Computational Analysis of CQD-Gold Nanoparticle Interaction.....	128
4.2.6 Cell Viability of MG-63 cell line in the presence of CQD-AuNP Solution.....	129
4.2.7 Stability of AuNPs Enhanced by Type-I Collagen.....	130
4.2.8 Role of β -mercaptoethanol in AuNP dispersion.....	132
4.3 Conclusions.....	135
4.4 References.....	136

Chapter 5: Sandalwood-derived Carbon Quantum Dots as Bioimaging Tools to Investigate the Toxicological Effects of Malachite Green in Model Organisms

5.1 Introduction.....	141
5.1.1 Threats Caused by Malachite Green in the Body.....	141
5.1.2 Unscrupulous Use of Malachite Green.....	142
5.1.3 The ill-effects of MG exposure on general biota.....	144
5.1.4 Use of Sandalwood-derived CQDs for Bioimaging of the Adverse Effects of MG.....	144

5.2 Results and Discussions.....	146
5.2.1 Morphology and Surface Charge of the Sandalwood-derived CQDs.....	146
5.2.2 Optical and Structural Properties of CQDs.....	147
5.2.3 Checking Local Green Colour Samples for the Presence of Malachite Green (MG).....	150
5.2.4 Dissection of MG Transport in Epidermal Onion (<i>Allium cepa</i>) Bulb Tissues.....	151
5.2.5 MG Toxicity Studies in Mung Beans (<i>Vigna Radiata</i>).....	153
5.2.6 Mung Plant Growth and Development Parameters for Assessing MG Toxicity.....	157
5.2.7 Bioimaging of Mung Plant Sections.....	159
5.2.8 Effects of MG on animal cells (MG-63 cell line) and golden hamster.....	160
5.2.9 Biocompatibility of Sandalwood Derived CQDs at both cellular and tissue level.....	161
5.2.10 CQD-Assisted Bioimaging for MG induced <i>in vitro</i> and <i>in vivo</i> morphometric changes.....	163
5.3 Conclusions.....	168
5.4 References.....	168

Chapter 6: pH Reversible Graphene Oxide-protein Bioconjugates with Proteolysis-Resistance Properties for Biomedical and Drug Delivery Applications

6.1 Introduction.....	177
6.1.1 Interaction of Graphene Oxide with Biomolecules.....	177
6.1.2 Attachment of Proteins and DNA to the GO Surface Through Non-covalent Bonds.....	178
6.1.3 Techniques and Strategies Employed for Shedding Light on Protein-GO Interactions.....	179
6.1.4 Biological Response and Applications of GO.....	181
6.2 Results and Discussions.....	182
6.2.1 Graphene Oxide and its Interaction with Amino Acids.....	182
6.2.2 Assessment of GO-Peptide Interactions for Conjugate Formation.....	186
6.2.3 The Interaction of GO with Proteins to Check the Formation of Conjugates.....	188
6.2.4 Design of pH-reversible Protein-GO Conjugates for Drug Delivery.....	194
6.3 Conclusions.....	196
6.4 References.....	196

Chapter 7: Probing the Blue-Green Fluorescence of Marigold Petal-derived Carbon Quantum Dots for Dissecting their Interaction with Dyes

7.1 Introduction.....	201
7.1.1 The Menace caused by Food Adulteration.....	201
7.1.2 Common Food Adulterants in Daily Consumables.....	201
7.1.3 Introduction to Carbon Quantum Dots as Detection Tools against Food Adulteration.....	203

7.1.4 The Choice of Carbon Precursor for CQD Synthesis: <i>Tagetes</i> corolla.....	204
7.1.5 Application of CQDs in the Detection of Food Adulterant Dyes.....	204
7.2 Results and Discussions.....	205
7.2.1 The Synthesis of CQDs using the Corolla of <i>Tagetes</i> cultivars....	205
7.2.2 Selection and Characterisation of Chosen CQDs with Highest Quantum Yield.....	208
7.2.3 Photoluminescence Spectra of the Four Selected CQDs.....	210
7.2.4 Elucidation of the Morphological Characteristics of CQDs.....	211
7.2.5 Use of the Four Selected CQD Samples for Developing an Adulterant Detection Device.....	213
7.2.6 The Interaction of Malachite Green with G-Quadruplex.....	214
7.2.7 Prototype Device Design for Detecting Food Adulteration.....	216
7.3 Conclusions.....	219
7.4 References.....	220
Chapter 8: Conclusions and Future Scope of Work.....	223
Permission Certificate from the Institutional Animal Ethical Committee..	229
List of Publications.....	231
