

## APPENDIX C

The laboratory synthesized PVA based alkaline membrane chemically crosslinked with 2.5 wt % glutaraldehyde was used for MEA fabrication and detail single cell study with various loading, fuel and electrolyte concentration was performed. The chemical crosslinked PVA membrane was doped with optimum 6 M KOH solution for imparting ionic conductivity. The anode and cathode electrocatalysts were Pt-Ru/C and Pt/C<sub>HSA</sub>, respectively. The fixed cathode electrocatalyst loading of 1 mg/cm<sup>2</sup> was taken for all the experiments. The cell temperature was maintained at 30 °C. The cathode oxidant used was humidified oxygen. The experimental results (current density vs. cell voltage and current density vs. power density characteristics) are given below:

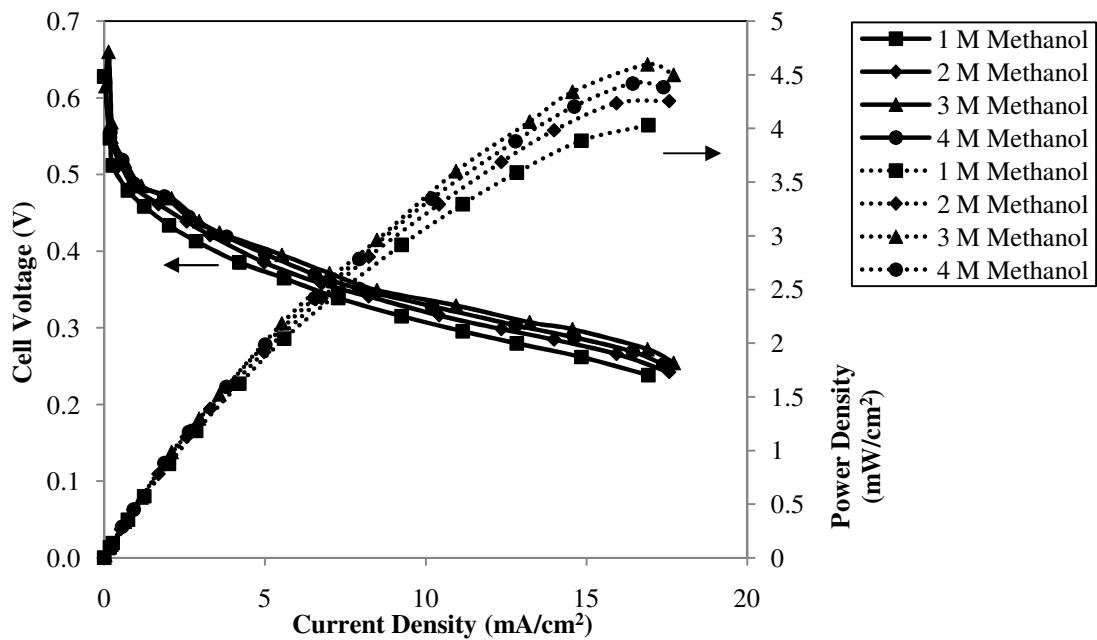

### C.1 Effect of methanol concentration at fixed Pt-Ru/C anode loading of 0.5 mg/cm<sup>2</sup>

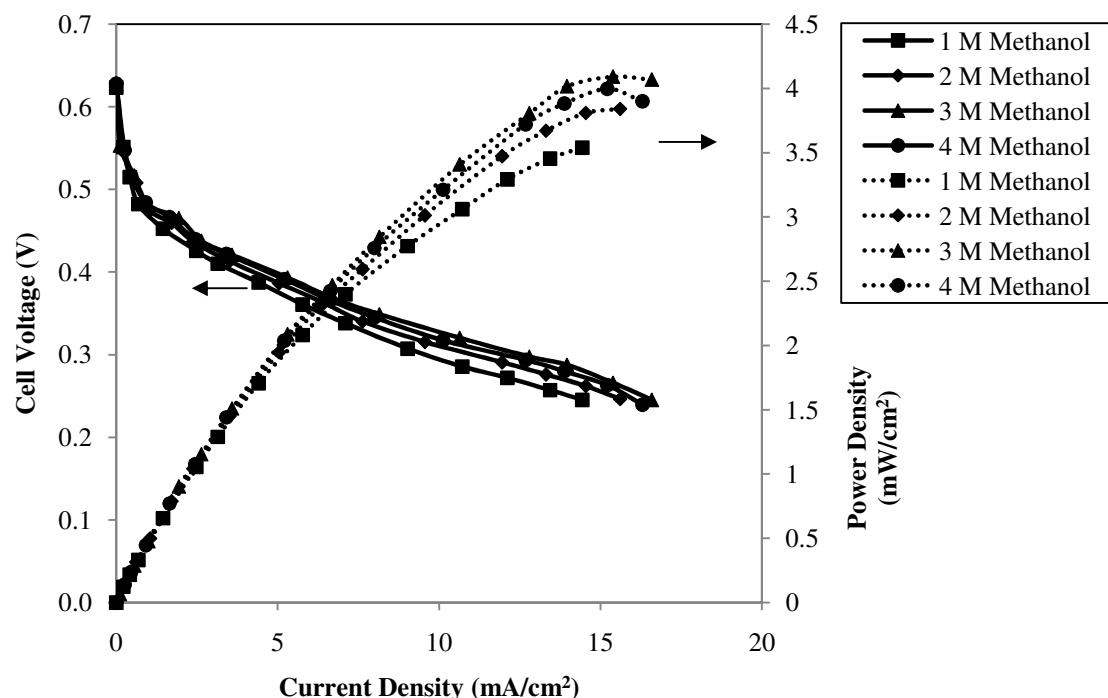

**Figure C.1** Current density vs. cell voltage and current density vs. power density characteristics for different methanol concentration using fixed 2 M KOH at a temperature of 30 °C; Dotted line-power density curves; Solid line-polarization curves.

**Figure C.2** Current density vs. cell voltage and current density vs. power density characteristics for different methanol concentration using fixed 4 M KOH at a temperature of 30 °C; Dotted line-power density curves; Solid line-polarization curves.

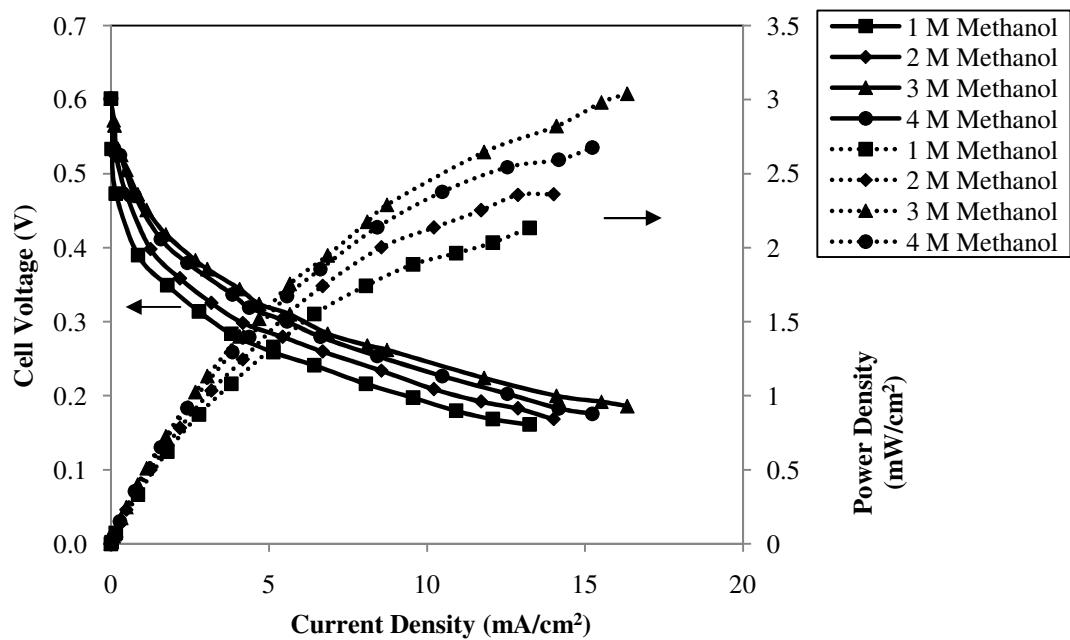

**Figure C.3** Current density vs. cell voltage and current density vs. power density characteristics for different methanol concentration using fixed 6 M KOH at a temperature of 30 °C; Dotted line-power density curves; Solid line-polarization curves.

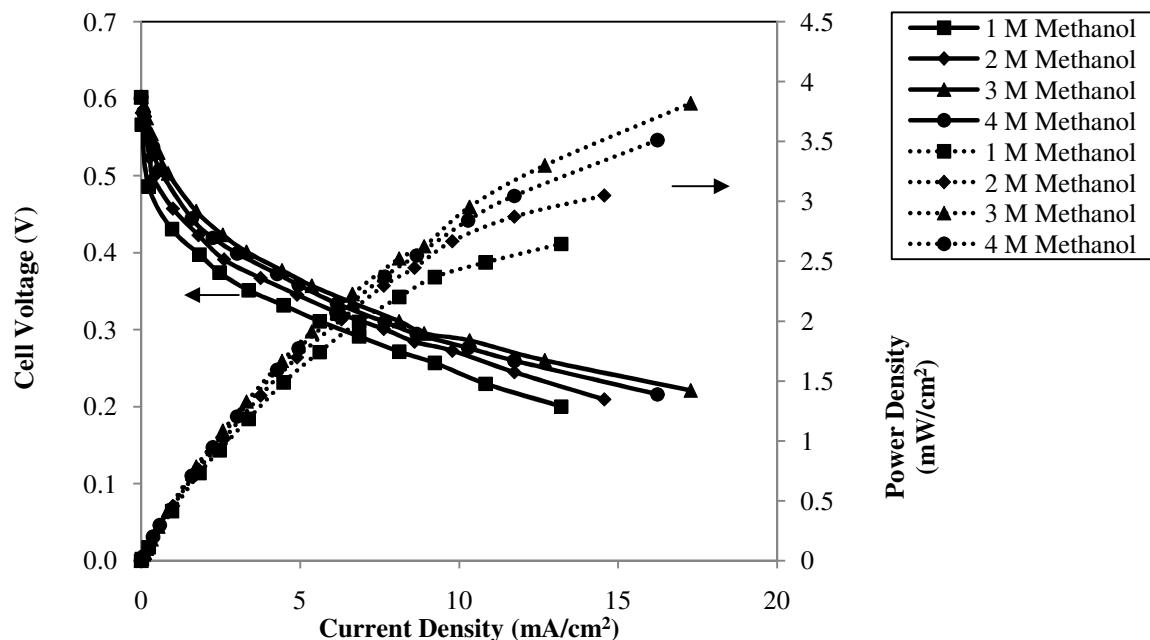

**Figure C.4** Current density vs. cell voltage and current density vs. power density characteristics for different methanol concentration using fixed 8 M KOH at a temperature of 30 °C; Dotted line-power density curves; Solid line-polarization curves.

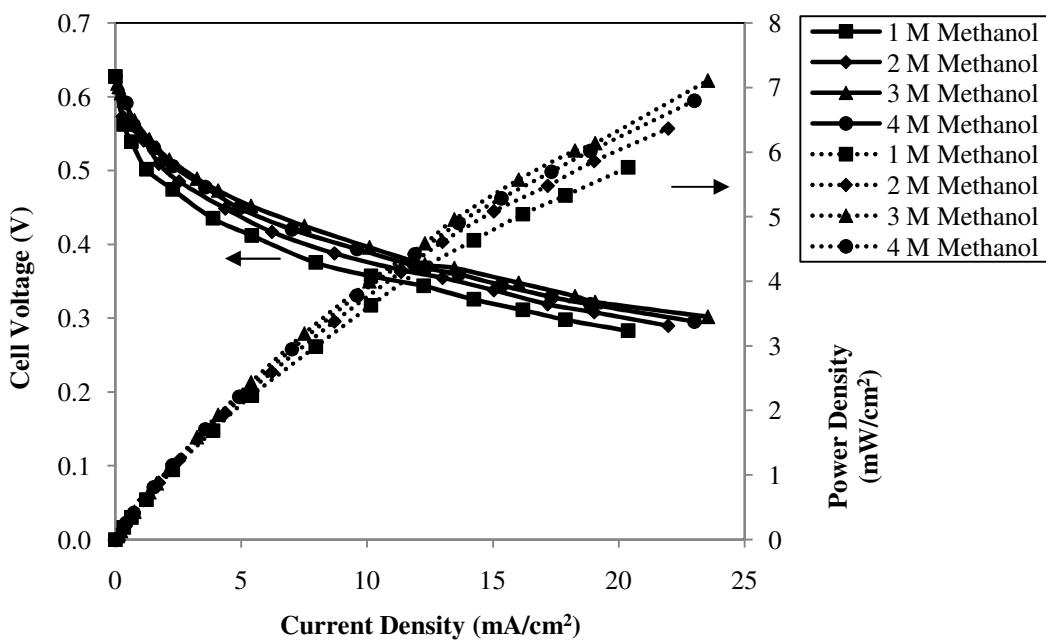

## C.2 Effect of methanol concentration at fixed Pt-Ru/C anode loading of $1 \text{ mg/cm}^2$

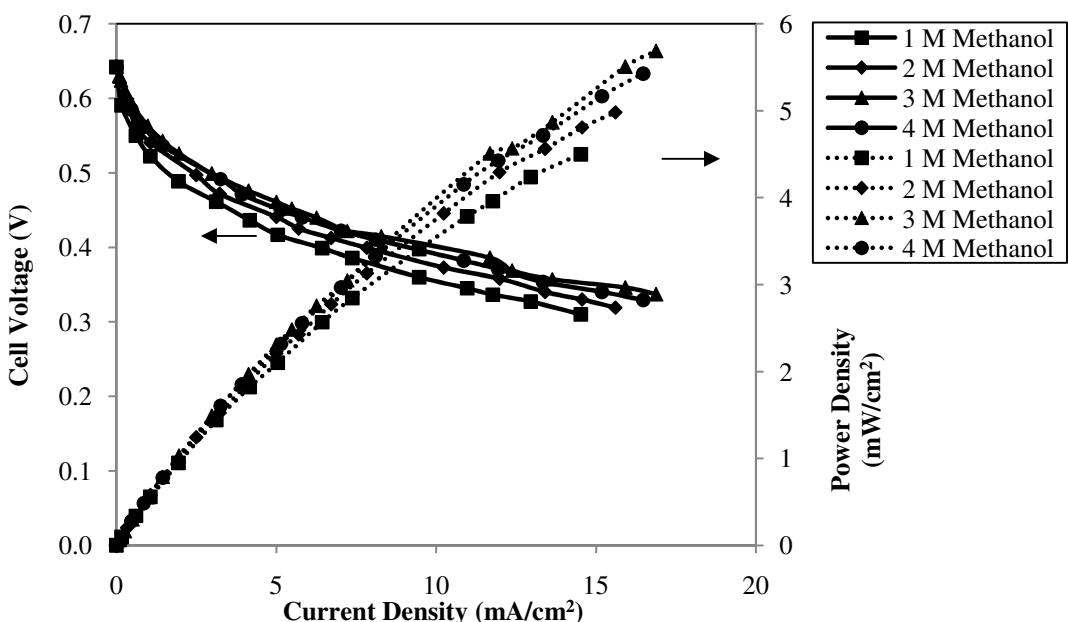

**Figure C.5** Current density vs. cell voltage and current density vs. power density characteristics for different methanol concentration using fixed  $2 \text{ M KOH}$  at a temperature of  $30 \text{ }^\circ\text{C}$ ; Dotted line-power density curves; Solid line-polarization curves.

**Figure C.6** Current density vs. cell voltage and current density vs. power density characteristics for different methanol concentration using fixed  $4 \text{ M KOH}$  at a temperature of  $30 \text{ }^\circ\text{C}$ ; Dotted line-power density curves; Solid line-polarization curves.

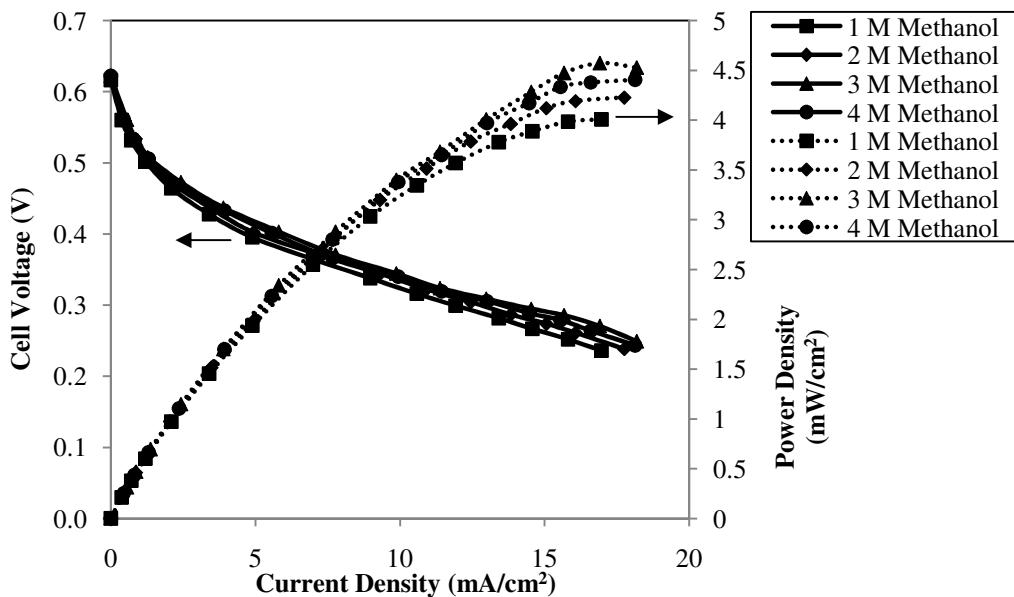

**Figure C.7** Current density vs. cell voltage and current density vs. power density characteristics for different methanol concentration using fixed 6 M KOH at a temperature of 30 °C; Dotted line-power density curves; Solid line-polarization curves.

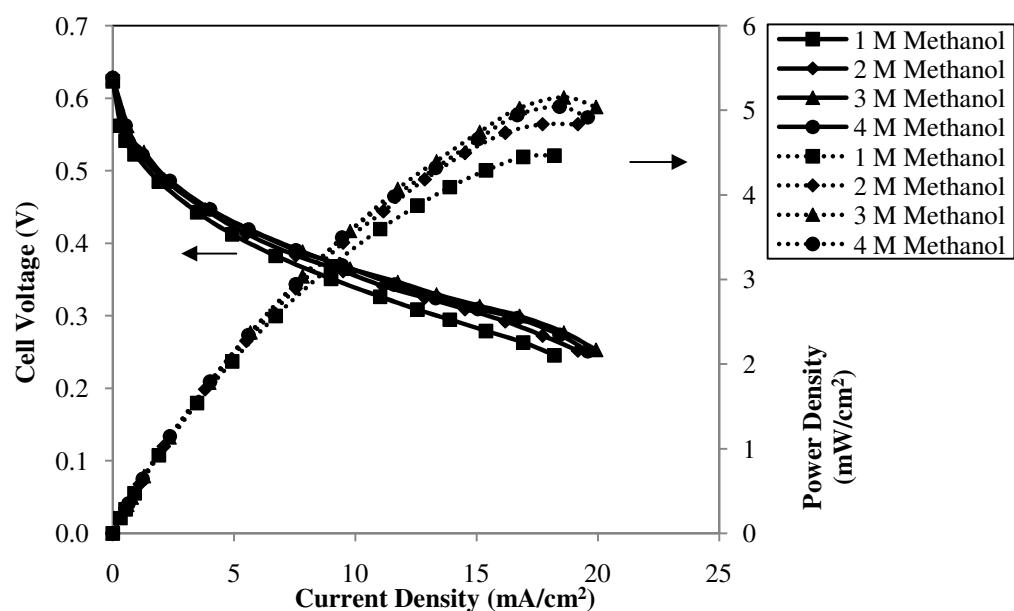

**Figure C.8** Current density vs. cell voltage and current density vs. power density characteristics for different methanol concentration using fixed 8 M KOH at a temperature of 30 °C; Dotted line-power density curves; Solid line-polarization curves.

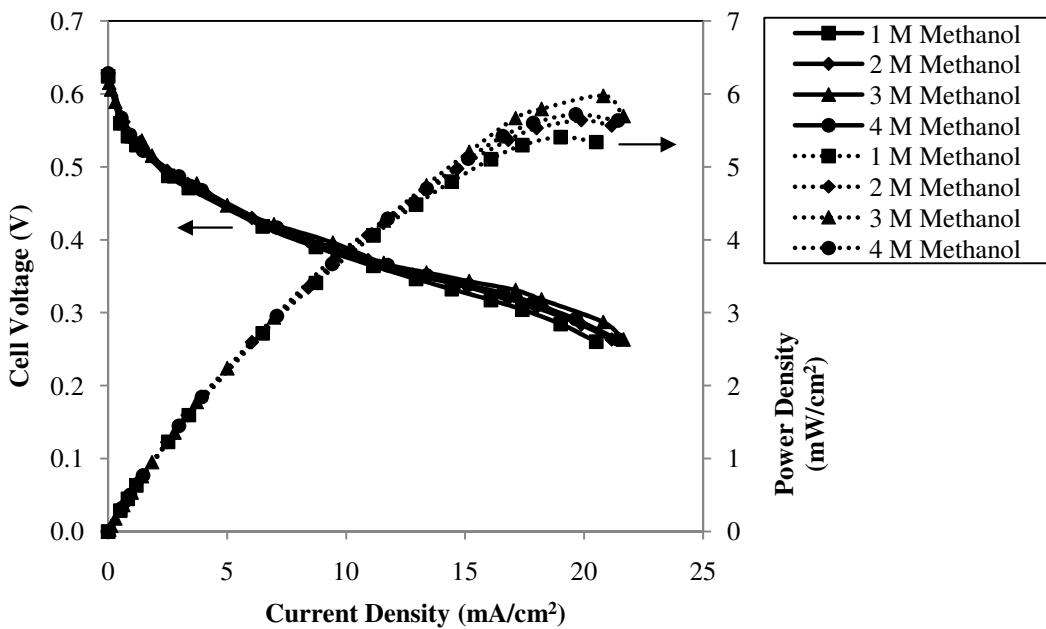

### C.3 Effect of methanol concentration at fixed Pt-Ru/C anode loading of $1.5 \text{ mg/cm}^2$

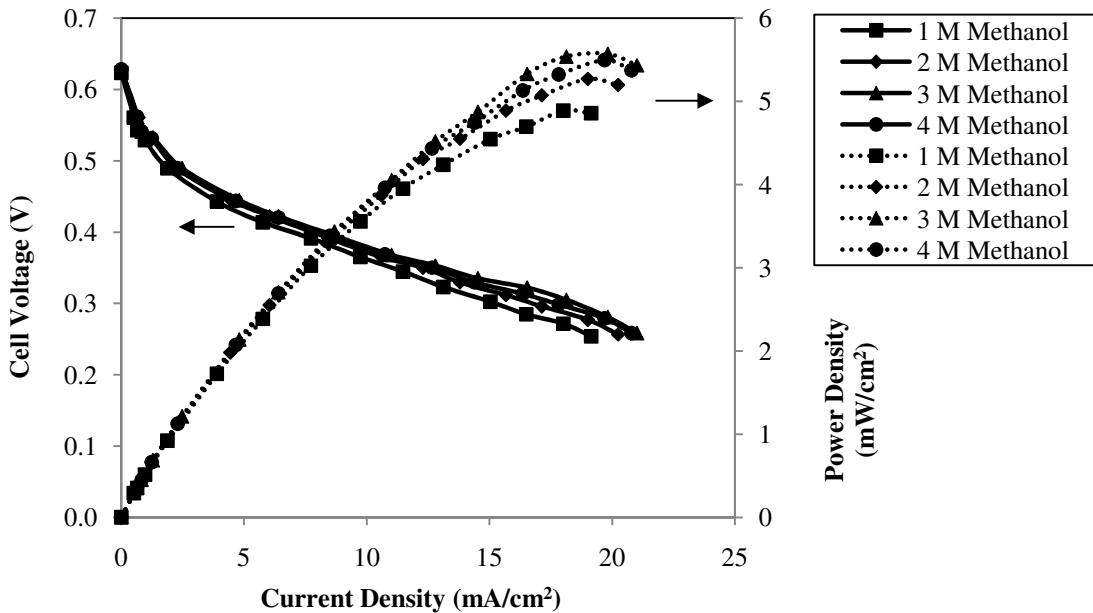

**Figure C.9** Current density vs. cell voltage and current density vs. power density characteristics for different methanol concentration using fixed 2 M KOH at a temperature of  $30^\circ\text{C}$ ; Dotted line-power density curves; Solid line-polarization curves.

**Figure C.10** Current density vs. cell voltage and current density vs. power density characteristics for different methanol concentration using fixed 4 M KOH at a temperature of  $30^\circ\text{C}$ ; Dotted line-power density curves; Solid line-polarization curves.

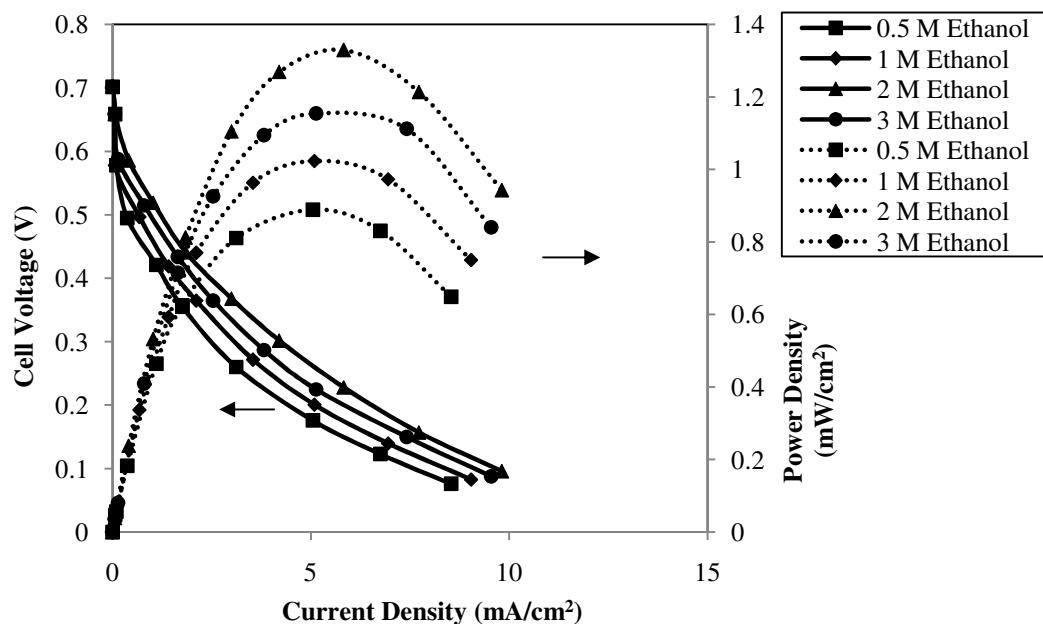

**Figure C.11** Current density vs. cell voltage and current density vs. power density characteristics for different methanol concentration using fixed 6 M KOH at a temperature of 30 °C; Dotted line-power density curves; Solid line-polarization curves.

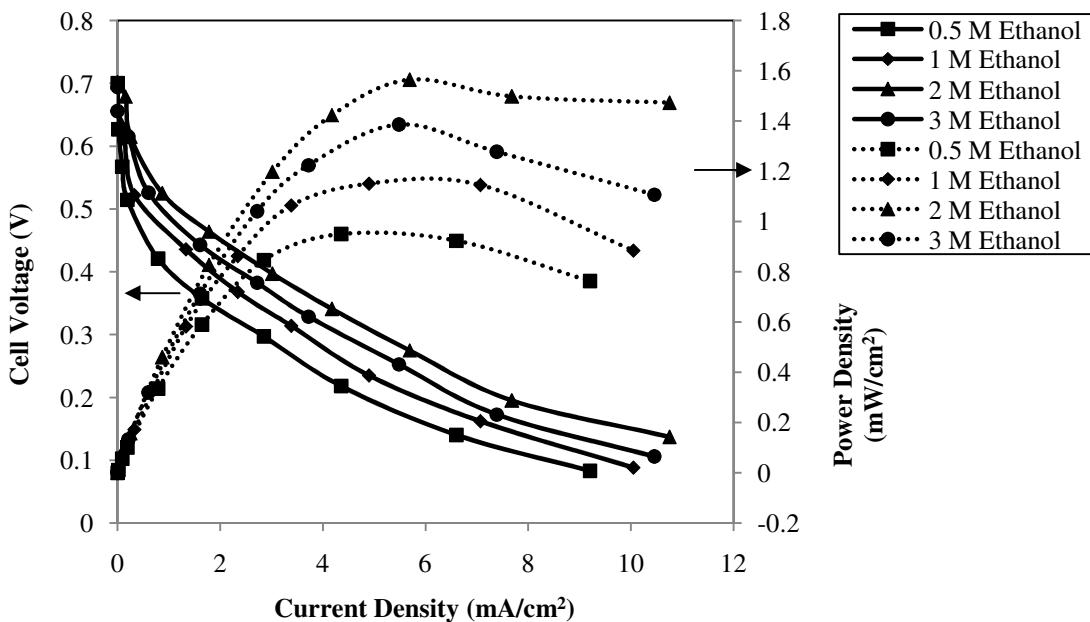

**Figure C.12** Current density vs. cell voltage and current density vs. power density characteristics for different methanol concentration using fixed 8 M KOH at a temperature of 30 °C; Dotted line-power density curves; Solid line-polarization curves.

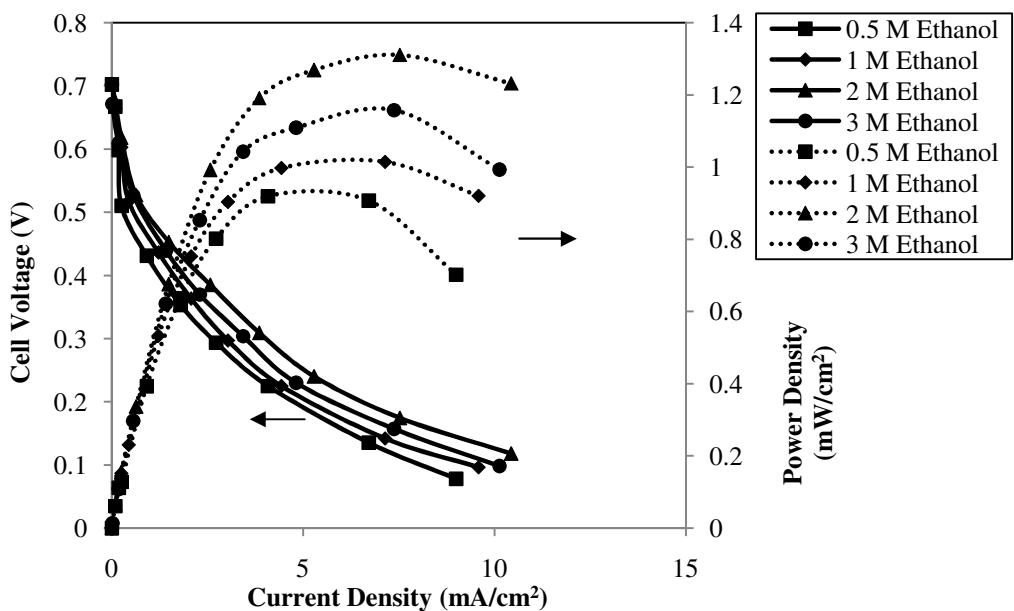

#### C.4 Effect of ethanol concentration at fixed Pt-Ru/C anode loading of $0.5 \text{ mg/cm}^2$

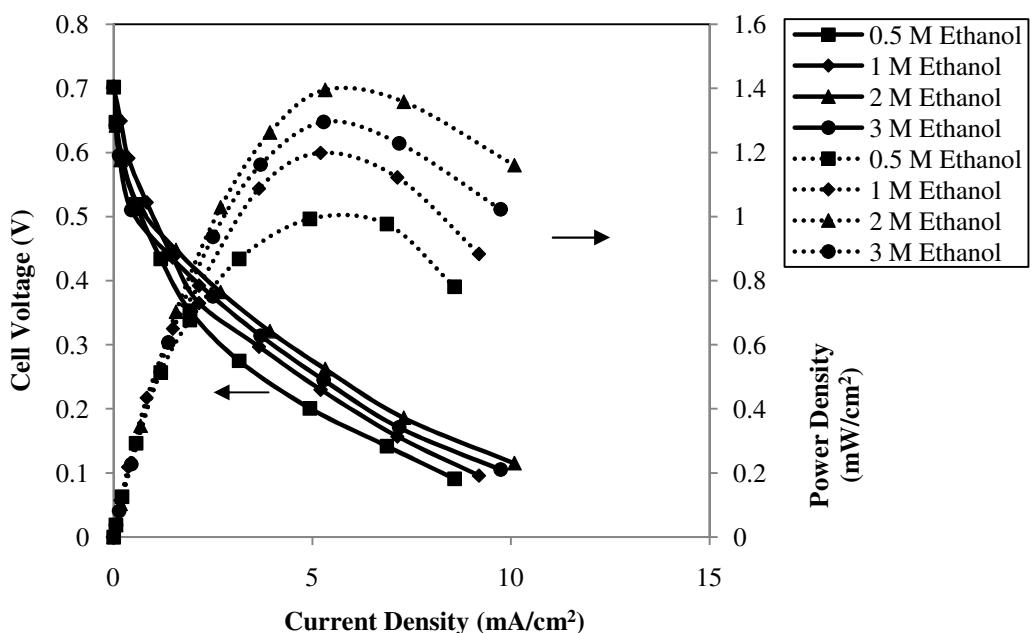

**Figure C.13** Current density vs. cell voltage and current density vs. power density characteristics for different ethanol concentration using fixed  $0.5 \text{ M KOH}$  at a temperature of  $30 \text{ }^\circ\text{C}$ ; Dotted line-power density curves; Solid line-polarization curves.

**Figure C.14** Current density vs. cell voltage and current density vs. power density characteristics for different ethanol concentration using fixed  $1 \text{ M KOH}$  at a temperature of  $30 \text{ }^\circ\text{C}$ ; Dotted line-power density curves; Solid line-polarization curves.

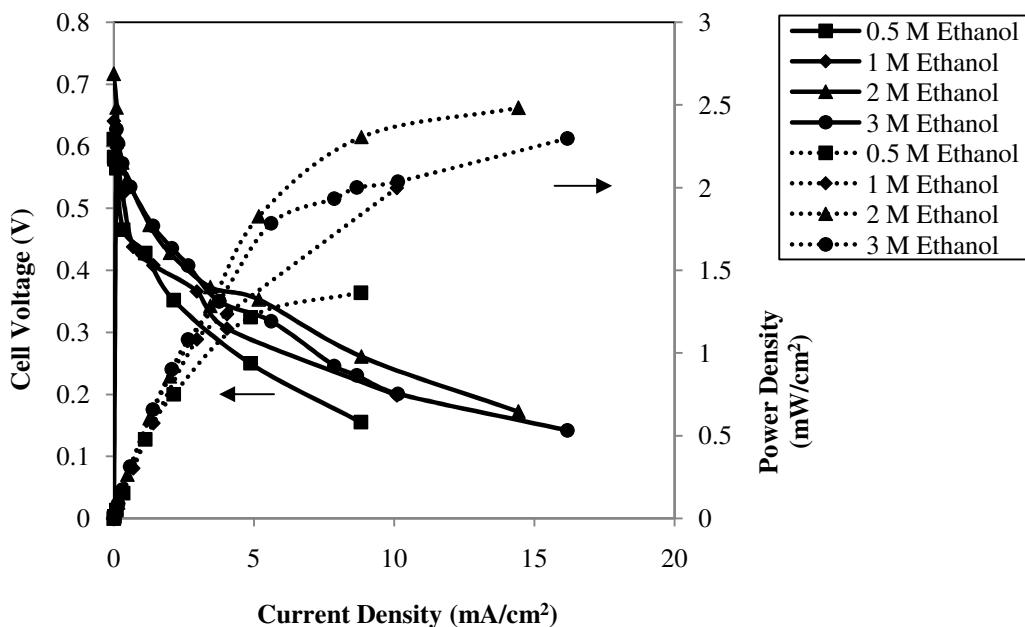

**Figure C.15** Current density vs. cell voltage and current density vs. power density characteristics for different ethanol concentration using fixed 1.5 M KOH at a temperature of 30 °C; Dotted line-power density curves; Solid line-polarization curves.

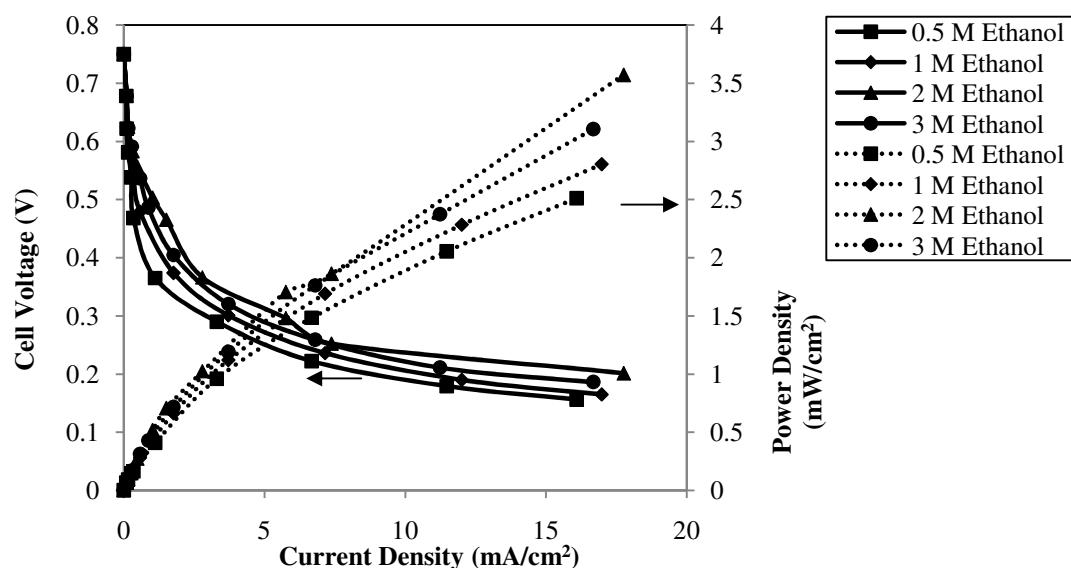

**Figure C.16** Current density vs. cell voltage and current density vs. power density characteristics for different ethanol concentration using fixed 2 M KOH at a temperature of 30 °C; Dotted line-power density curves; Solid line-polarization curves.

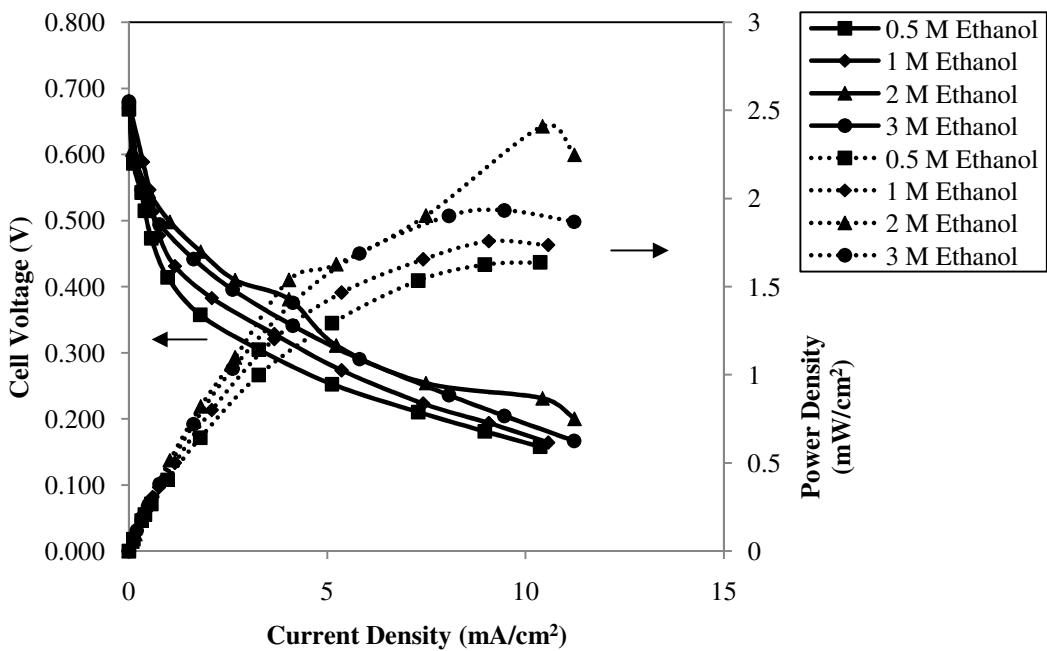

### C.5 Effect of ethanol concentration at fixed Pt-Ru/C anode loading of $1 \text{ mg/cm}^2$

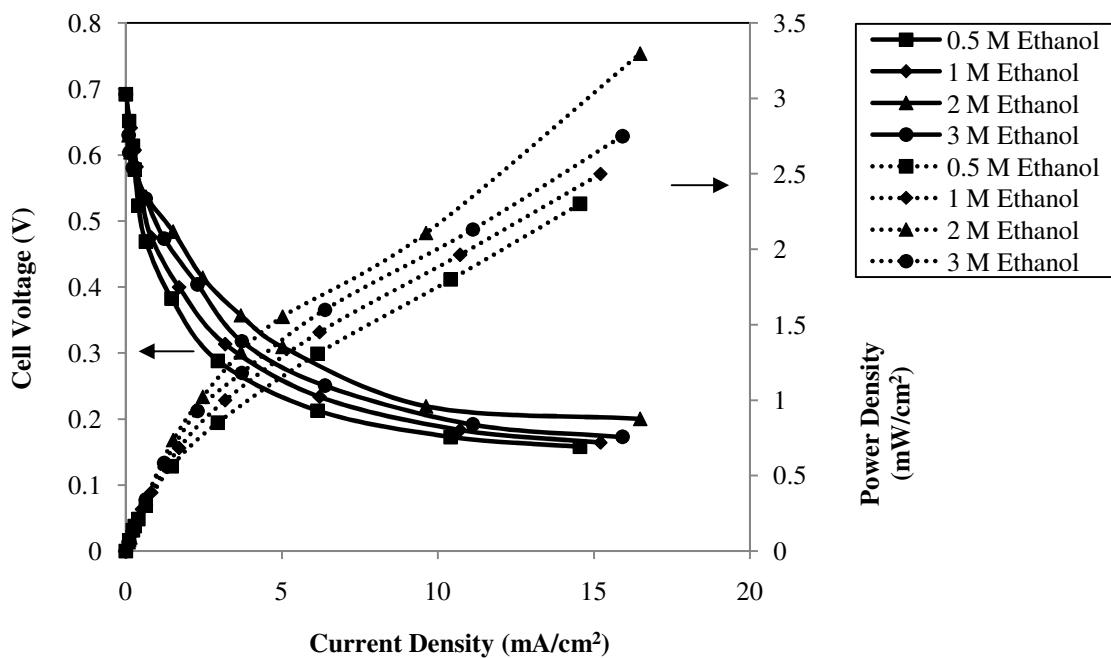

**Figure C.17** Current density vs. cell voltage and current density vs. power density characteristics for different ethanol concentration using fixed  $0.5 \text{ M KOH}$  at a temperature of  $30 \text{ }^\circ\text{C}$ ; Dotted line-power density curves; Solid line-polarization curves.

**Figure C.18** Current density vs. cell voltage and current density vs. power density characteristics for different ethanol concentration using fixed  $1 \text{ M KOH}$  at a temperature of  $30 \text{ }^\circ\text{C}$ ; Dotted line-power density curves; Solid line-polarization curves.

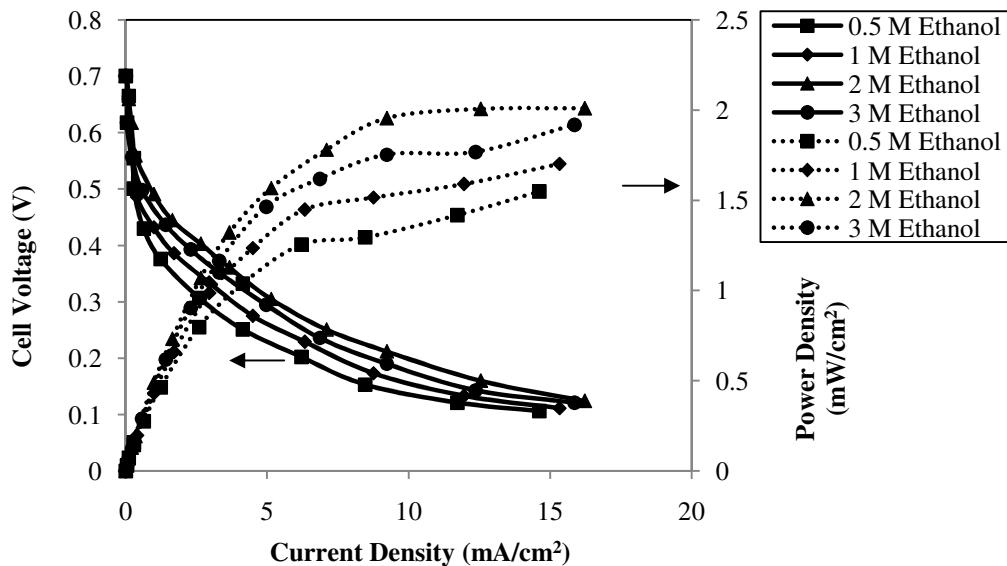

**Figure C.19** Current density vs. cell voltage and current density vs. power density characteristics for different ethanol concentration using fixed 1.5 M KOH at a temperature of 30 °C; Dotted line-power density curves; Solid line-polarization curves.

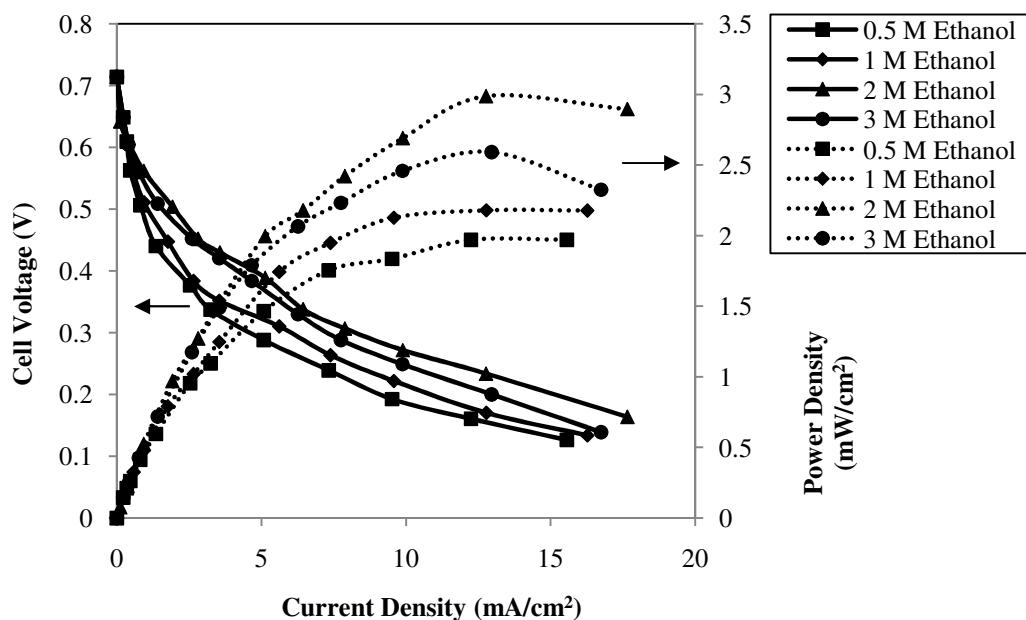

**Figure C.20** Current density vs. cell voltage and current density vs. power density characteristics for different ethanol concentration using fixed 2 M KOH at a temperature of 30 °C; Dotted line-power density curves; Solid line-polarization curves.

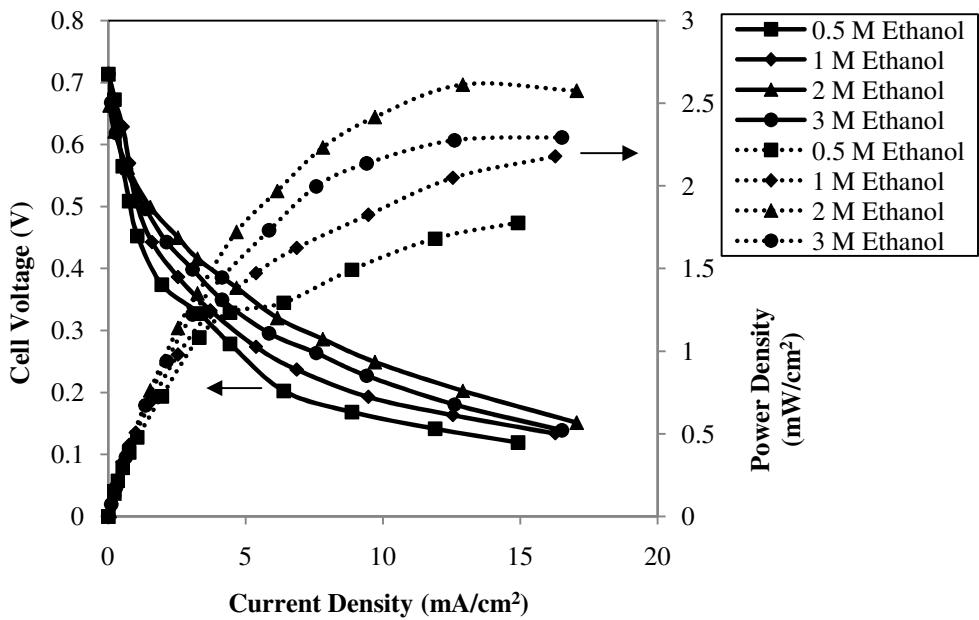

### C.6 Effect of methanol concentration at fixed Pt-Ru/C anode loading of $1.5 \text{ mg/cm}^2$

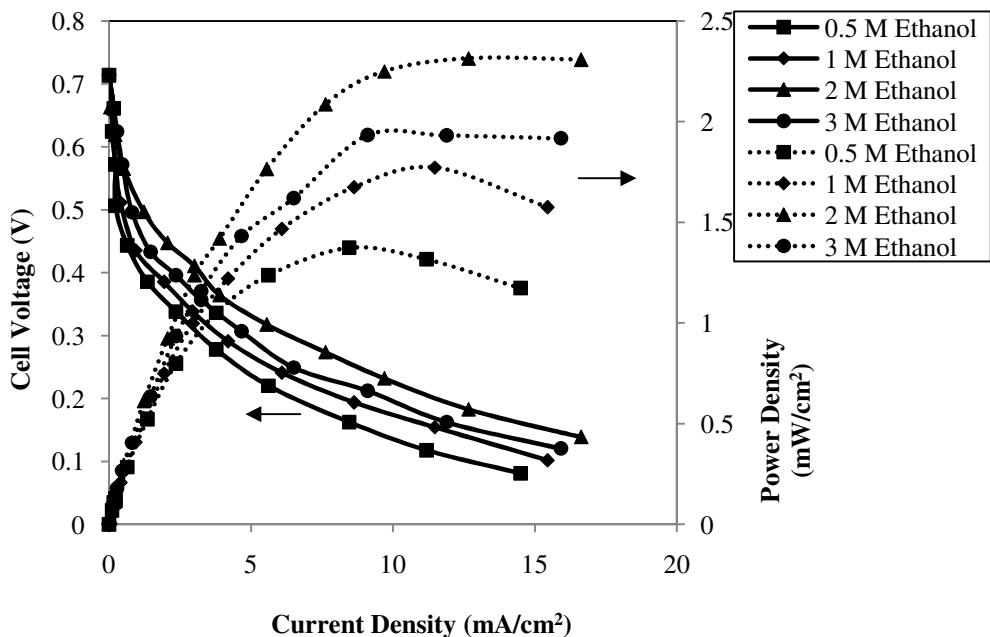

**Figure C.21** Current density vs. cell voltage and current density vs. power density characteristics for different ethanol concentration using fixed  $0.5 \text{ M KOH}$  at a temperature of  $30 \text{ }^\circ\text{C}$ ; Dotted line-power density curves; Solid line-polarization curves.

**Figure C.22** Current density vs. cell voltage and current density vs. power density characteristics for different ethanol concentration using fixed  $1 \text{ M KOH}$  at a temperature of  $30 \text{ }^\circ\text{C}$ ; Dotted line-power density curves; Solid line-polarization curves.

**Figure C.23** Current density vs. cell voltage and current density vs. power density characteristics for different ethanol concentration using fixed 1.5 M KOH at a temperature of 30 °C; Dotted line-power density curves; Solid line-polarization curves.

**Figure C.24** Current density vs. cell voltage and current density vs. power density characteristics for different ethanol concentration using fixed 2 M KOH at a temperature of 30 °C; Dotted line-power density curves; Solid line-polarization curves.
