

TABLE OF CONTENTS

<u>CONTENTS</u>	<u>PAGE NO.</u>
List of Figures	xvi
List of Tables	xix
List of Abbreviations	xxi
List of Symbols	xxiv
Preface	xxvi
Chapter 1	
Introduction	1
1.1 Biofuel sustainability	1
1.2 Generations of biofuels	2
1.2.1 First generation of biofuel	2
1.2.2 Second generation of biofuel	2
1.2.3 Third generation of biofuel	3
1.2.4 Fourth generation of biofuel	3
1.3 Biogas as biofuel	4
1.3.1 Biogas composition	4
1.3.2 Advantages of biogas technology	5
1.3.3 Biochemistry and microbiology of anaerobic digestion	5
1.4 Pretreatment methods	8
1.5 Locally available biomass in Varanasi	9
1.5.1 Agricultural residue	10
1.5.2 Other wastes	10
1.6 Origin of the problem	10
Chapter 2	
Review of Literature	12
2.1 Biogas scenario in India	12

2.2	Selection of feedstock	13
2.2.1	Criteria for feedstock selection	13
2.2.2	Biogas production from liquid waste	15
2.2.3	Biogas production from solid waste	18
2.3	Lignocelluloses as biogas substrate	20
2.3.1	Composition of lignocellulosic residue	20
2.3.2	Pretreatment methods for lignocelluloses and biogas production	21
2.4	Organic fraction of municipal solid waste as biogas substrate	29
2.4.1	MSW composition and characteristics	29
2.4.2	MSW management methods	32
2.4.3	OFMSW Pretreatment and biogas production	35
2.5	Assessment of pretreatment	39
2.5.1	Effect of the pretreatment on the structure of substrate	39
2.5.2	Effect of pretreatment on the hydrolysate	41
2.6	Co-digestion to improve the biogas production from OFMSW	41
2.7	Effect of operating process parameters on anaerobic digestion	44
2.8	Summary of literature review	46
2.9	Research gap	47
2.10	Objectives of the present work	48
Chapter 3		
Materials and Methods		
3.1	Materials	49
3.1.1	Substrates	49
3.1.2	Chemicals and reagents	49
3.1.3	Microorganisms	50
3.2	Analytical methods	51
3.2.1	Proximate analysis	51
3.2.2	Ultimate analysis	52

3.2.3	Compositional analysis	53
3.2.4	Calorific value estimation by bomb calorimeter	54
3.2.5	Preparation of spore suspension and spore count	55
3.2.6	sCOD estimation	56
3.2.7	Glucose determination	56
3.2.8	Volatile fatty acids (VFA) determination	56
3.2.9	Phenolic content determination	57
3.2.10	Fourier transform infrared spectroscopy (FTIR)	57
3.2.11	X-ray diffraction analysis (XRD)	57
3.2.12	Scanning electron microscope (SEM) analysis	58
3.2.13	Gas volume quantification	58
3.2.14	Gas composition analysis	58
3.2.15	Potassium determination in manure	59
3.3	Framework of models used	59
3.3.1	Response surface methodology (RSM)	59
3.3.2	First order model for anaerobic digestion	59
3.3.3	Modified Gompertz model	60
3.4	Sawdust collection and characterisation	61
3.5	Sawdust pretreatment	61
3.5.1	Selection of potential chemical reagent	61
3.5.2	NaOH treatment	62
3.5.3	NaOH-microwave treatment	62
3.5.4	NaOH-autoclave treatment	62
3.5.5	Biological treatment	63
3.5.6	Optimisation of NaOH-autoclave treatment	64
3.6	Anaerobic digestion of sawdust	64
3.7	OFMSW collection and characterisation	65
3.8	OFMSW pretreatment	66

3.8.1	Chemical treatment	66
3.8.2	Thermal treatment	66
3.8.3	Thermo-chemical treatment	66
3.8.4	Biological pretreatment	66
3.9	Anaerobic digestion of OFMSW	67
3.10	Optimisation of chemical treatment of OFMSW by RSM	67
3.11	Optimisation of thermo-chemical treatment of OFMSW by RSM	68
3.12	Anaerobic digestion and kinetic modelling	69
3.13	Co-digestion approaches	69
3.13.1	Suitable C/N ratio selection	69
3.13.2	Optimisation of process parameters of co-digestion by RSM	70
3.13.3	Kinetic modelling of co-digestion	70
3.14	Intermediate variation and end product characterisation	70
Chapter 4		
Results and Discussion		71
4.1	Physicochemical characterisation of sawdust and inoculum	71
4.2	Effect of pretreatment on sawdust solubilisation	72
4.2.1	Effect of biological treatment on sawdust	72
4.2.2	Selection of potential chemical reagent	74
4.2.3	Effect of NaOH and combined treatment on sCOD and VFA	75
4.2.4	Effect of pretreatment on phenolic content and glucose	75
4.2.5	Effect of pretreatment on sawdust composition	78
4.2.6	FTIR study of treated and native sawdust	78
4.2.7	Effect of pretreatment on sawdust crystallinity	83
4.2.8	Effect on surface morphological structure of treated and native sawdust	86
4.2.9	Influence of time for NaOH-autoclave pretreatment	88

4.3	Anaerobic digestion of sawdust	89
4.3.1	Biogas production from sawdust	89
4.3.2	Bio-energy conversion rate	91
4.4	Physico-chemical characterisation of OFMSW and inoculum	93
4.5	Effect of thermal, chemical and thermo-chemical treatment on OFMSW solubilisation	94
4.5.1	Effect of pretreatment on physico-chemical characteristics of OFMSW	94
4.5.2	Crystallinity study of OFMSW by XRD	95
4.5.3	FTIR study of OFMSW	98
4.5.4	Effect of pretreatment on surface structure of OFMSW	102
4.5.5	Effect of biological treatment on OFMSW solubilisation	103
4.5.6	Effect of different pretreatments on biogas production	105
4.6	Optimisation of chemical treatment of OFMSW by RSM	106
4.6.1	Solubilisation characteristics of NaOH treated OFMSW samples	106
4.6.2	Box-behnken design and statistical analysis of chemical treatment of OFMSW	108
4.6.3	Analysis of variance (ANOVA) for chemical treatment of OFMSW	108
4.6.4	Optimisation of pretreatment parameters for chemical treatment	112
4.6.5	RSM model validation for chemical treatment of OFMSW	115
4.7	Experimental biogas evaluation	115
4.8	Kinetic model evaluation for chemically treated OFMSW	117

4.8.1	First order model	117
4.8.2	Modified Gompertz model	117
4.8.3	Kinetic model comparison	119
4.9	Optimisation of thermo-chemical treatment of OFMSW	121
4.9.1	Effect of thermo-chemical treatment on OFMSW solubilisation	121
4.9.2	Box-Behnken design for thermo-chemical treatment of OFMSW	124
4.9.3	Model fitting and ANOVA analysis	126
4.9.4	Effect of influencing factors on OFMSW solubilisation	127
4.9.5	Model validation for thermo-chemically treated OFMSW	130
4.10	Anaerobic digestion and kinetics of thermo-chemical treatment of OFMSW	131
4.10.1	Biogas production of thermo-chemically treated OFMSW	131
4.10.2	Kinetic modelling of thermo-chemical treatment	132
4.11	Co-digestion Results	133
4.11.1	Physicochemical characterisation of activated sewage sludge	133
4.11.2	C/N ratio selection for co-digestion	134
4.11.3	RSM optimisation of process parameter of co-digestion	135
4.11.4	Box-Behnken design of co-digestion	136
4.11.5	Statistical analysis by ANOVA for co-digestion	136
4.11.6	3D plots and optimisation for co-digestion	138
4.11.7	Model validation for co-digestion	139
4.11.8	Characteristics of different digesters during anaerobic digestion	141
4.11.9	Kinetic modelling of anaerobic co-digestion at optimised condition	143
4.11.10	Intermediate variation and end product characterisation	145

Chapter 5	
Conclusions and Future Recommendations	146
5.1 Conclusions	146
5.2 Recommendations for future work	149
5.3 Limitations of biogas production	150
References	151
Appendix	174
List of Publications	176
