

LIST OF TABLES

Table No.	Table Title	Page No.
1.1	Composition of biogas for different options	4
1.2	Electron donors and acceptors used by acetogenic bacteria	8
2.1	C/N ratio of different feedstock reported in literature	14
2.2	Biogas production from solid waste	22
2.3	Compositional characterisation of some lignocelluloses	24
2.4	Biogas production from different lignocellulosic residue	27
2.5	Composition of MSW in metro cities of India	30
2.6	Composition of MSW in different countries reported in literature	31
2.7	Physico-chemical characteristics of OFMSW reported in literature	32
2.8	Waste treatment strategies applied in Indian states	33
2.9	Biogas production from OFMSW through different pretreatment	36
2.10	Co-digestion of OFMSW	43
2.11	Effect of operating parameters on biogas production	45
4.1	Characterisation of native sawdust and inoculum	71
4.2	Effect of biological treatment on compositional components of sawdust	72
4.3	Effect of chemical reagents on solubilisation of sawdust	76
4.4	Compositional characterisation of sawdust before and after NaOH pretreatment	81
4.5	FTIR spectroscopic characterisation of native and NaOH treated sawdust	82
4.6	Crystallinity index obtained from XRD data of sawdust	84
4.7	Physico-chemical characterisation of OFMSW	93
4.8	Characterisation of OFMSW samples before and after pretreatment	95
4.9	Crystallite size of OFMSW samples before and after treatments	96
4.10	FTIR analysis of OFMSW sample before and after treatments	99

4.11	Box-Behnken design matrix and response yield for chemical treatment	109
4.12	ANOVA analysis of VFA and sCOD for chemical treatment	111
4.13	RSM model validation for chemical treatment of OFMSW	115
4.14	Biogas produced from experimental results and model predictions of chemically treated OFMSW	118
4.15	Estimation of kinetic model's parameters for chemically treated OFMSW	119
4.16	Box-Behnken design matrix for thermo-chemical treatment of OFMSW	125
4.17	Model fitting and ANOVA analysis of thermo-chemical treatment	128
4.18	RSM model validation of thermo-chemical treatment	131
4.19	Kinetic modelling of anaerobic digestion at optimised thermo-chemical pretreatment of OFMSW	133
4.20	Physico-chemical characterisation of sewage sludge	134
4.21	C/N ratio of different OFMSW-ASS mixture	135
4.22	Box-Behnken design for optimisation of co-digestion process parameters	137
4.23	ANOVA Analysis of co-digestion	138
4.24	RSM model validation for co-digestion process parameter optimisation	141
4.25	Characteristics of different digesters for co-digestion	142
4.26	kinetics modelling parameters of co-digestion	144
4.27	Intermediate variation and end product characterisation	145
