

List of Tables

Table 1.1: The classification and composition of aluminium dross.....	6
Table 1.2: Patented technologies for recycling aluminium dross by pyrometallurgical route.....	20
Table 1.3: Parameters of acidic leaching of waste aluminium dross.....	23
Table 1.4: Alkaline leaching of aluminium dross	26
Table 1.5: Patents for the recycling of aluminium dross by hydrometallurgical route	31
Table 1.6: Valuable products generated using aluminium dross	39
Table 1.7: Industrial technology for the utilization of aluminium dross for gaseous products.....	43
Table 2.1: Phases observed in XRD pattern of aluminium dross.....	52
Table 2.2: The reaction parameters studied for the evolution of hydrogen.....	62
Table 3.1: The variation of aqueous tamarugite solution with the turbidity and pH of the water samples in Jar Test.....	88
Table 4.1: Various organic solvents used for the experiments and their dielectric constants compared to water.....	101
Table 4.2: The calculated weight percentage of the elements present in tamarugite and as observed in the EDS reports of samples.....	109
Table 5.1: Variation of amount of potash alum produced with increase in the heating time period.....	137

Table 6.1: Rate of gas evolution for different temperatures at different time periods for fixed concentration of NaOH solution.....162

Table 6.2 Rate of gas evolution for different temperatures at different time periods for fixed concentration of KOH solution.....169
