Certificate	ii
Acknowledgments	v
Abstract	ix
Table of contents	xii
List of figures	xvii
List of tables	xxi
List of abbreviations and symbols	xxii
Chapter-1 Introduction and Literature Survey	1-40
1.1. Introduction	1
1.2. Aerosol	4
1.2.1. Major parameter affecting aerosol behavior	4
1.2.1.1. Particle size	4
1.2.1.2. Particle size distribution	5
1.2.1.3. Particle concentration	6
1.2.1.4. Particle forces	6
1.2.2. Effects of aerosol on environment and human health	7
1.2.2.1. Impact on environment	7
1.2.2.2. Impact on human health	9
1.2.3. Sources of aerosol	10
1.2.4. Mechanism of aerosol formation	11
1.2.4.1. Mechanical disintegration	11
1.2.4.2. Gas-to-particle conversion	11
1.2.5. Measurement of aerosol	12

1.3. Graphite	15
1.3.1. Physical properties	16
1.3.2. Chemical properties	17
1.3.3. Background of use of graphite in nuclear technology	17
1.3.4. Review of studies on graphite oxidation during air ingress in a nuclear reactor	18
1.3.5. Graphite oxidation	20
1.3.5.1. Chemical kinetics	20
1.3.6. Solid - Fluids reaction	22
1.3.6.1. Progressive model	22
1.3.6.2. Shrinking core model	23
1.3.7. Literature survey on oxidation of graphite	24
1.4. Motivation of work	28
1.5. Problem definition	29
1.6. Objective of the thesis	29
1.7. Work Plan	29
1.8. Thesis outline	30
Summary	32
References	33
Chapter-2 High Temperature Aerosol sampling Facility: Scheme and Instrumentation	41-64
2.1. Heating unit	44
2.1.1. Furnace, PID controller and thermocouples	44
2.1.2. Flange and flow homogenizer	46
2.1.3. Recrystallized alumina tube and boat properties	47

2.1.4. Quartz tube	49
2.2. Clean air supply unit	49
2.3. Sampling-aerosol measurement system	51
2.3.1. Borosilicate glass tube	51
2.3.2. Isokinetic probe	52
2.3.3. Heat exchanger	53
2.3.4. Aerosol diluter	54
2.3.5. Flow splitter	55
2.3.6. Aerosol measurement system	56
2.3.6.1. Nanoscan working principle	57
2.3.6.2. Working of OPS	59
2.3.7. Gas analyser	61
Summary	62
References	63
Chapter-3 Scoping and Calibration Experiments	65-86
3.1. Characterization of air temperature	65
3.2. Sampling of aerosol	69
3.3. Transport of aerosol	77
3.3.1. Diffusion loss	79
3.3.2. Gravitational loss	81
3.3.3. Thermophoresis loss	82
3.4. Condensation of water vapour present in air	84
Summary	85
References	86

Chapter-4 Material, Methodology and Experimental Procedure	87-96
4.1. Material	87
4.2. Characterization of graphite sample	88
4.2.1. XRD analysis	88
4.2.2. EDS analysis	89
4.2.3. TGA analysis	90
4.3. Methodology	91
4.3.1. Experimental conditions	91
4.3.1.1. Heating at constant temperature	91
4.3.1.2. Heating at variable heating rate	92
4.3.2. Experimental procedure	92
4.4. Calculation of mass of graphite converted into combustion products	95
Chapter-5 Physico - Chemical Characteristics of Aerosol Generated by Burning of Bare and Alumina coated Graphite	97-136
5.1. Bare graphite burning at constant temperature	97
5.1.1. Effect of heating on surface morphology during oxidation	98
5.1.2. Characteristics of generated particles	100
5.1.3. Size distribution	101
5.1.4. Effect of carrier gas flow rate	104
5.1.5. Gas analysis	105
5.1.6. Weight loss analysis	106
5.2. Graphite burning at different heating rates	109
5.2.1. Characteristics of generated particles	109
5.2.2. Size distribution	110
5.2.3. Gas analysis	112

5.2.4. Weight loss analysis	115
5.3. Results for alumina coating	116
5.3.1. Effect of heating on surface morphology during oxidation	116
5.3.2. Characteristics of generated particles	118
5.3.3. Size distribution	120
5.3.4. Gas analysis	122
5.3.5. Weight loss analysis	125
5.3.6. XRD analysis of residual sample	126
5.4. Discussion	127
5.4.1. Mechanism of particle generation	127
5.4.2. Oxidation mechanism in graphite	129
5.4.3. Effect of heating at constant temperature on the generation of particles	130
5.4.4. Effect of heating rate on the particle generation	133
Summary	134
References	135
Chapter-6 Conclusions and Scope for Future Work	137-140
6.1. Conclusion	137
6.2. Scope for future work	139
Summary	140
List of publications	142
