

List of Figures

Figure No.	Page No.
Fig. 1.1 : Nine structures of bimetallic nanoparticles	15
Figure 3.1: Bottom-up strategy for the mycogenic synthesis of Nanoparticles	54
Figure 3.2: Mechanism of intracellular and extracellular synthesis of Gold (Au) and Silver (Ag) Nanoparticles through Mold	56
Figure 3.3: Instruments used in study of Nanoparticles (A) Shaker incubator (B) Autoclave (C) Laminar Air Flow (LAF) & (D) Centrifuge	62
Figure 3.4: Schematic diagram of Scanning Electron Micrograph (SEM)	87
Figure 4.1: Characteristic growth curve of <i>Aspergillus flavus</i> NCIM 650	79
Figure 4.2: Characteristic growth curve of <i>Aspergillus niger</i> NCIM 616 80	80
Figure 4.3: Characteristic growth curve of <i>Aspergillus niger</i> NCIM 1025	81
Figure 4.4: Characteristic growth curve of <i>Phoma exigua</i> NCIM 1237	82
Figure 4.5: Characteristics growth curve of <i>Trichoderma reesei</i> NCIM 1186	83
Figure 4.6: Characteristics growth curve of <i>Trichoderma reesei</i> NCIM 992	84
Figure 4.7: Comparative bar chart for growth pattern of two different mold strains i.e. without and with gold chloride solution, of different mold strains	86
Figure 4.8: Voltammogram curve for blank media	87
Figure 4.9: Voltammogram curve for <i>Aspergillus flavus</i> NCIM 616	88
Figure 4.10: Voltammogram curve for <i>Aspergillus niger</i> NCIM 616	88
Figure 4.11: Voltammogram curve for <i>Aspergillus niger</i> NCIM 1025	88
Figure 4.12: Voltammogram curve for <i>Phoma exigua</i> NCIM 1237	89
Figure 4.13: Voltammogram curve for <i>Trichoderma reesei</i> NCIM 992	89
Figure 4.14: Formation of Gold Nanoparticles (a) Control (b) Gold Nanoparticles, in solution	91
Figure 4.15: UV-Visible Spectra of Blank	94

Figure 4.16: UV-Visible Spectra of Gold Nanoparticles prepared by <i>Aspergillus flavus</i> NCIM 650	94
Figure 4.17: UV-Visible Spectra of Gold Nanoparticles prepared by <i>Aspergillus niger</i> NCIM 616	95
Figure 4.18: UV-Visible spectra of Gold Nanoparticles prepared by <i>Aspergillus niger</i> NCIM 1025	95
Figure 4.19: UV-Visible Spectra of Gold Nanoparticles prepared by <i>Phoma exigua</i> NCIM 1237	96
Figure 4.20: UV-Visible Spectra of Gold Nanoparticles prepared by <i>Trichoderma reesei</i> NCIM 1186	96
Figure 4.21: UV-Visible Spectra of Gold Nanoparticles prepared by <i>Trichoderma reesei</i> NCIM 992	97
Figure 4.22: FTIR Spectra of lyophilised Mold biomass	98
Figure 4.23: FTIR Spectra of Mold biomass treated with Gold salt	99
Figure 4.24: Particle Size of Gold Nanoparticles	100
Figure 4.25: SEM image of Gold Nanoparticles prepared by <i>Aspergillus flavus</i> strain	101
Figure 4.26: SEM image of Gold Nanoparticles prepared by <i>Aspergillus niger</i> NCIM 616 strain	102
Figure 4.27: SEM image of Gold Nanoparticles prepared by <i>Aspergillus niger</i> NCIM 1025 strain	102
Figure 4.28: SEM image of Gold Nanoparticles prepared by <i>Phoma exigua</i> strain	103
Figure 4.29: SEM image of Gold Nanoparticles prepared by <i>Trichoderma reesei</i> strain	103
Figure 4.30: EDX Micrograph of Gold Nanoparticles	104
Figure 4.31: TEM image of Gold Nanoparticles obtained from <i>Aspergillus flavus</i>	105
Figure 4.32: TEM image Gold Nanoparticles obtained from <i>Aspergillus niger</i> NCIM 616	106
Figure 4.33: TEM image of Gold Nanoparticles obtained from <i>Aspergillus niger</i> NCIM 1025	106
Figure 4.34: TEM image of Gold Nanoparticles obtained from <i>Phoma exigua</i>	107

Figure 4.35: TEM image of Gold Nanoparticles obtained from <i>Trichoderma reesei</i>	107
Figure 4.36: Free radical scavenging activity of Gold Nanoparticles	108
Figure 4.37: Bar-chart of Concentration of Gold Nanoparticle versus Percentage of Inhibition in DPPH Assay	109
Figure 4.38: Bar-chart of Concentration of Gold Nanoparticle versus Percentage of Inhibition in Hydrogen Peroxide Assay	111
Figure 5.1: Brief description of Silver Nanoparticles	113
Figure 5.2: Comparative growth pattern of two different <i>Trichoderma reesei</i> NCIM 992 strains i.e. without and with Silver Nitrate solution	114
Figure 5.3: UV-Visible spectra of Blank	117
Figure 5.4: UV-Visible spectra of Silver Nanoparticles	117
Figure 5.5: Particle Size of Silver Nanoparticles	118
Figure 5.6: SEM image of Silver Nanoparticles	119
Figure 5.7: EDX Micrograph of Mold	120
Figure 5.8: EDX Micrograph of Silver Nanoparticles	120
Figure 5.9: TEM image of Silver Nanoparticles	121
Figure 6.1: Comparative growth pattern of two different <i>Trichoderma reesei</i> NCIM 992 strains i.e. without and with Bimetallic (Gold Chloride and Silver Nitrate) salt	125
Figure 6.2: Formation of Silver, Gold and Bimetallic (Gold-Silver) Nanoparticles by the effect of <i>Aspergillus niger</i> NCIM 616	126
Figure 6.3: Formation of Silver, Gold and Bimetallic (Gold-Silver) Nanoparticles by the effect of <i>Trichoderma reesei</i> NCIM 992	128
Figure 6.4: Extracellular production of Silver, Gold & Bimetallic (Gold-Silver) Nanoparticles	130
Figure 6.5: Intracellular production of Silver, Gold & Bimetallic (Gold-Silver) Nanoparticles	131
Figure 6.6: UV-visible spectrophotometric characteristic peak of Blank and Bimetallic (Gold-Silver) Nanoparticles produced by <i>Aspergillus niger</i> NCIM 616	133
Figure 6.7: UV-Visible spectrophotometric characteristic peaks of Gold, Silver and	134

Bimetallic (Gold-Silver) Nanoparticles produced by *Trichoderma reesei* NCIM 992

Figure 6.8: XRD Spectra of mold biomass treated with Gold and Silver salts	136
Figure 6.9: FTIR Spectra of Mold biomass	137
Figure 6.10: FTIR spectra of Mold biomass treated with Gold and Silver salts	138
Figure 6.11: Particle Size of Bimetallic (Gold-Silver) Nanoparticles	139
Figure 6.12: SEM & EDX images of Bimetallic (Gold-Silver) Nanoparticles	140
Figure 6.13: TEM micrograph of Bimetallic (Gold-Silver) Nanoparticles	142
Figure 7.1: Zone of inhibition in mm of Control, Daptomycin, Gold-Silver solution and Daptomycin conjugated in Bimetallic (Gold-Silver) in <i>E. coli</i> , <i>S. aureus</i> , <i>M. luteus</i> and <i>S. epidermis</i> .	162
