	Abstract		ii-iii
	List of Tables		iv-vi
	List of Figures		vii-xiii
	Elementary Notations and Terminologies		xiv
1	Introduction		1-18
	1.1	Model Order Reduction	1
	1.2	Model Order Reduction: Historical Aspect	2
	1.3	Model Order Reduction of Interval Systems	12
	1.4	Objective of the Thesis	17
	1.5	Organisation of the Thesis	17
2	Stability of Interval Systems		19-36
	2.1	Introduction	19
	2.2	Kharitonov's Theorem for Real Polynomials	21
	2.3	Kharitonov's Theorem for Complex Polynomials	29
	2.4	Kharitonov's Theorem for Discrete Time Interval Systems	32
3	Existing Techniques on Model Order Reduction of Interval Systems		37-49
	3.1	Introduction	37
	3.2	Problem Formulation	38
	3.3	Routh Based Approximations	38
	3.3.1	Direct Routh Approximation for Interval Systems	38
	3.3.2	$\gamma - \delta$ Approximation for Interval Systems	40
	3.3.3	γ Approximation for Interval Systems	43
	3.3.4	Modified Routh Approximation for Interval Systems	45

		3.3.5	Improved Modified Routh Approximation for Interval Systems	48
	3.4	Limitation Using Interval Routh approximation		49
4	Proposed Techniques for the Reduction of Continuous Time Interval Systems Based on Mixed Methods			50-124
	4.1	Introduction		50
	4.2	Problem Formulation		50
		4.2.1	Integral Square Error	51
		4.2.2	Integral Absolute Error	51
	4.3	Mihailov Criterion Approximation		51
		4.3.1	Mihailov Criterion and Routh Approximation Method (MCRAM)	52
		4.3.2	Mihailov Criterion and Factor Division Method (MCFDM)	54
		4.3.3	Mihailov Criterion and Cauer Second Form (MCCSF)	56
	4.4	Alpha Truncation Method		73
		4.4.1	Alpha Truncation and Factor Division Method	73
		4.4.2	Alpha Truncation and Cauer Second Form	75
	4.5	Direct Routh Approximation Method		87
	4.6	Direct Truncation Method for Interval Systems		94
	4.7	Differentiation Method for Interval Systems		106
		4.7.1	Direct Differentiation Method for Interval Systems	106
5	Proposed Techniques for the Reduction of Continuous Time Interval Systems Considering dependency property			125-156
	5.1	Introduction		125
	5.2	Problem Formulation		126
	5.3	Modified Differentiation Method for Interval Systems		126
	5.4	Modified Schwarz Approximation method for Interval		134

		Systems	
	5.5	Comparison of Methods	139
	5.6	Illustrative Examples	140
6	Proposed Techniques for the Reduction of Discrete Time Interval Systems		157-171
	6.1	Introduction	157
	6.2	Preliminaries	157
	6.3	Error Index	158
	6.4	Modified Differentiation Method for Discrete Time Interval Systems.	158
	6.5	α – Truncation Based Method Using Linear Transformation	160
	6.5.1	$\alpha - \beta$ Truncation Method	160
	6.5.2	α – Truncation and Factor Division Method	163
	6.6	Illustrative Examples	165
7	Control System Design Using Stability Boundary Locus		172-180
	7.1	Interval Plant Stabilization Using PI controller	172
	7.2	Illustrative Example	175
8	Conclusions		181-184
	7.1	Summary of Results	181
	7.2	Highlights of Contributions	183
