

LIST OF FIGURES

Figure 1.1:	Peak brightness of free-electron lasers in the VUV and X-ray regime compared to 3rd generation light sources.	7
Figure 1.2:	Free Electron Lasers (FELs) (a) Typical layout (b) Geometrical configuration (c) Schematics sketch.	9
Figure 1.3:	Free electron laser amplifiers configuration.	15
Figure 1.4:	Free electron laser oscillators configuration.	16
Figure 1.5:	Self-amplified spontaneous emission (SASE) FELs.	16
Figure 2.1:	Wiggler magnets arrangement.	31
Figure 2.2:	(a) The dispersion relation for the infinite length of interaction and (b) The dispersion relation for the finite length of interaction.	33
Figure 2.3:	Operating point of FELs.	35
Figure 2.4:	Frequency ranges from millimeter to sub millimeter wavelengths (between electronics and photonics regime).	36
Figure 2.5:	Schematic of physical mechanism interaction between electron beams and planar wiggler.	37
Figure 2.6:	Accelerating zones and retarding zone by Ponderomotive force with A_p .	44
Figure 2.7:	Phase (P, ψ) space trajectories of separatrix of the trapped-untrapped electrons.	49
Figure 2.8:	Spectral function for the spontaneous emission of a cold beam helical wiggler.	60
Figure 2.9:	Gain function for the spontaneous emission of a cold beam helical wiggler.	62
Figure 2.10:	Phase (P, ψ) space trajectories of the trapped electrons.	71
Figure 2.11:	Gain as a function of initial electron energy.	73
Figure 3.1:	Beat-wave excitation as FEL amplifiers (FELA).	79
Figure 3.2:	Dispersion Relation Curve to the Beam Modes and Radiation Modes. Curve I (Solid Line) and II (Dotted Line Validation)	90

	Represent the Beam Modes and Curve III Represent the Radiation Modes for the given parameters as Table 3.1.	
Figure 3.3:	Radiation Frequency (ω_l) versus Beam Voltage (V_b) for the given parameters as Table 3.1.	91
Figure 3.4:	Growth Rate (Γ) versus Beam Voltage (V_b) for the given Parameters as Table 3.2.	93
Figure 3.5:	Growth Rate (Γ) versus Normalized Lengths (z/L) for the given Parameters as Table 3.2.	93
Figure 3.6:	Normalized momentum versus normalized phase of beam electrons.	99
Figure 3.7:	Gain function (G) Versus Momentum (P_{in}) of trapped electrons.	101
Figure 3.8:	Efficiency (η) versus normalized distance (ξ).	102
Figure 4.1:	Typical layout (a) and 3-D schematic diagram for simulation of the FEL amplifiers (b & c).	108
Figure 4.2:	Flow chart of design procedure of the FEL amplifiers.	119
Figure 4.3:	Fields pattern of the FEL amplifiers for the desired TM_{01} mode (i) Electric field patterns at the input port (a) contour plot (b) vector plot (c) Magnetic field patterns at the input port, contour plot, and (ii) Magnetic field patterns at the output port (d) contour plot and (e) vector plot.	126
Figure 4.4:	FEL amplifiers simulated and desired observation for (a) S-parameters (b) Impedance in Ohm (c) Power accepted.	128
Figure 4.5:	FEL amplifiers output power vs radiated frequencies.	129
Figure 4.6:	Cross sectional view of the helical wiggler.	132
Figure 4.7:	Simulation results for the case of Iron helix with rectangular cross section as (a) The helix geometry without drift tube (b) Transverse Magnetic Field Amplitude B_x (T) & B_{\perp} (T) without drift tube (c) The helix geometry with drift tube (d) Transverse Magnetic Field Amplitude B_x (T) & B_{\perp} (T) with drift tube.	134
Figure 4.8:	Simulation results for the case of steel helix with round cross section as (a) The helix geometry without drift tube (b) Transverse Magnetic Field Amplitude B_x (T) & B_{\perp} (T) without drift tube (c) The helix geometry with drift tube (d) Transverse Magnetic Field Amplitude B_x (T) & B_{\perp} (T) with drift tube (e)	137

	Transverse Magnetic Field Amplitude $B_x(T)$ with drift tube (f) Transverse Magnetic Field Amplitude $B_{\perp}(T)$ with helix wire diameter and The predictions of formula (4.15) is also validated for square cross section as shown in (f).	
Figure 4.9:	Simulation results for the case of Iron helix with round cross section as (a) The helix geometry without drift tube (b) Transverse Magnetic Field Amplitude $B_x(T)$ & $B_{\perp}(T)$ without drift tube (c) The helix geometry with drift tube (d) Transverse Magnetic Field Amplitude $B_x(T)$ & $B_{\perp}(T)$ with drift tube.	139
Figure 4.10:	Simulation results for the case of Iron helix with round cross section as (a) The helix geometry with copper drift tube (d) Transverse Magnetic Field Amplitude $B_x(T)$ & $B_{\perp}(T)$ with copper drift tube.	140
Figure 4.11:	Simulation results for the case of Iron helix with round cross section as (a) The helix geometry with copper drift tube (d) Transverse Magnetic Field Amplitude $B_x(T)$ & $B_{\perp}(T)$ with copper drift tube.	141
Figure 4.12:	CST design model of FEL amplifiers (a & b) Lay out (c) diagram for simulation of the FEL amplifiers.	144
Figure 4.13:	Wiggling view of the electron beams during PIC Simulations (a), & (b).	145
Figure 4.14:	Power evolution of the electron bunches transfer to the RF wave.	146
Figure 4.15:	Frequency spectrum of the TM_{11} mode.	146
Figure 4.16:	Temporal amplitude curve of the TM_{11} mode.	148
Figure 4.17:	Temporal power plot of the TM_{11} mode.	148
