Table of contents	vi-x
List of figures	xi-xviii
List of tables	xix
Nomenclature	xx-xxiv
Abstract	xxv-xxix
1. Introduction	**1-8**
1.1 Overview	1
1.2 Motivation	1
1.3 Contribution	6
1.4 Thesis Structure	7
2. Literature Review	**9-21**
2.1 Introduction	9
2.2 Thermal Energy Storage	11
2.2.1 Sensible heat storage	11
2.2.2 latent heat storage	12

2.3 Design guidelines of PCM 17

2.4 Effect of climate and operating parameters 20

2.5 Research Gap 20

3. Solar distillation using three different phase change materials stored in a copper cylinder **22-46**

3.1 Overview 22

3.2 Materials and Methods 22

3.2.1 Experimental setup and procedure 22

3.2.2 Principle of operation 27

3..3 Heat transfer and energy balance 28

3.3.1 Heat loss due to convective heat transfer 29

3.3.2 Heat loss due to radiative heat transfer 29

3.3.3 Heat loss due to evaporative heat transfer 30

3.3.4 solar still with PCM (charging mode) 31

3.3.5 solar still with PCM (discharging mode) 32

3.4 Results and discussion 33

3.4.1 Variation of solar intensity, ambient temperature and glass cover temperature with time 33

3.4.2 Variation of water basin temperature with depth of water 36

3.4.3 Temperature variation of PCM and basin liner 39

3.4.4 Variation of heat transfer coefficient for different PCMs 41

3.4.5 Variation of total distillate with water depth and validation 44

3.5 Summary 46

4. Performance assessment of a passive solar still integrated with thermal energy storage and nanoparticle stored in copper cylinders **47-70**

4.1 Overview 47

4.2 Materials and methods 47

4.2.1 Experimental Procedure 47

4.2.2 Operating principle 53

4.3. Energy balance and heat transfer 54

4.3.1 Heat transfer between water basin and glass cover 55

4.4 Uncertainty analysis 57

4.5 Results and discussion 58

4.5.1 Hourly variation of ambient, glass cover temperature, and solar intensity 58

4.5.2 Hourly variation of liner temperature, basin water, PCM, and NPCM 61

4.5.3 Variation of heat transfer coefficient for SSS, SSPCM, and SSNPCM 65

4.5.4 Effect of PCM, nanoparticle and copper cylinder on daily productivity 68

4.6 Summary 69

5. Heat transfer coefficient and productivity of the frugal solar still integrated with a novel economic model **71-92**

5.1 Overview 71

5.2 Materials and Methods 71

5.2.1 Experimental part 71

5.2.2 Data collection 76

5.2.3 Impact of nanoparticle in the productivity of single slope solar still 77

5.2.4 Thermal analysis 77

5.3 Results and discussion 79

5.3.1 Hourly variation of solar intensity, ambient and glass cover temperature 79

5.3.2 Variation of heat transfer coefficient for SSS, SSPCM, and SSNPCM 81

5.3.3 Hourly temperature variation of basin water, PCM, and NPCM 84

5.4 Economic analysis of the proposed frugal solar still with PCM and nanoparticle 86

5.5 Payback period of solar still 88

5.6 Market entry of the proposed novel frugal solar still 90

5.7 Summary 91

6. Conclusions and scope for future work **93-96**

6.1 Conclusions 93

6.2 Future scope of work 95

References **97-107**
