List of figures .....	xii
List of tables.....	xxiii
List of abbreviations and symbols .....	xxiv
Preface .....	xxvii
<b>Chapter 1 Introduction</b>	
1.1. Structure and anatomy of skeletal muscle .....	2
1.1.1. Excitation and contraction coupling.....	4
1.2. Myogenesis and regeneration of skeletal muscle .....	6
1.2.1. In vivo myogenesis.....	6
1.2.2. In vitro myogenesis.....	7
1.2.3. Regulation of in vitro myogenesis .....	8
1.3. Need for skeletal muscle tissues.....	10
1.4. Skeletal muscle tissue engineering .....	13
1.5. Literature review .....	15
1.5.1. 3D bioprinting strategy .....	17
1.5.2. Optogenetics strategy .....	22
1.5.3. Micropatterning strategy .....	23
1.6. Research objectives .....	26
1.7. Thesis outline .....	28
<b>Chapter 2 Bioprinting of skeletal muscle like tissue models</b>	
2.1. Introduction .....	34
2.2. Materials and method .....	37
2.2.1. Materials.....	37
2.2.2. Culture of C2C12 myoblast cells.....	38
2.2.3. Preparation of bioink gel .....	38
2.2.4. Development of the 3D bioprinting setup.....	39
2.2.5. Bioprinting process.....	39
2.2.6. Porosity measurement of bioprinted constructs.....	40
2.2.7. Swelling study .....	40
2.2.8. Rheological properties of the bioink.....	40
2.2.9. Cell encapsulation and bioprinting.....	41
2.2.10. Cell viability analysis in bioprinted constructs by live/dead assay .....	41
2.2.11. Visualization of actin filaments and nuclei .....	42

2.2.12. Image and statistical analysis .....	42
2.3. Results and discussion .....	43
2.3.1. Bioprinting setup and bioink properties .....	43
2.3.2. Bioprinting of porous scaffold and their characterization .....	46
2.3.3. Bioprinting of cells-laden in vitro tissue constructs .....	50
2.4. Summary .....	56
<b>Chapter 3 Development of optically sensitive cells</b>	
3.1. Introduction .....	58
3.2. Materials and method .....	61
3.2.1. Materials.....	61
3.2.2. Bacterial culture and isolation of plasmid AAV-CAG-ChR2-GFP using alkaline lysis method .....	61
3.2.3. Culture of C2C12, HepG2 and NIH 3T3 cell lines .....	62
3.2.4. Transfection of C2C12, HepG2 and NIH 3T3 cell line with the isolated plasmid DNA .....	62
3.2.5. Microscopic observations of the cells.....	63
3.2.6. Methodology for fluorescence intensity analysis .....	63
3.2.7. Statistical analysis.....	63
3.3. Results and discussion .....	64
3.3.1. Culture of <i>E. coli</i> XL 10 gold bacteria containing plasmid DNA (AAV-CAG- ChR2-GFP).....	64
3.3.2. Isolation and estimation of concentration and purity of the plasmid DNA (AAV-CAG-ChR2-GFP) .....	64
3.3.3. Microscopic observation of transfected cells.....	66
3.3.4. Fluorescence intensity analysis of transfected cells .....	70
3.4. Summary .....	75
<b>Chapter 4 Microchannel flowed plasma process for micropatterning of myoblasts</b>	
4.1. Introduction .....	77
4.2. Materials and methods .....	79
4.2.1. Materials.....	79
4.2.2. Patterning of hydrophilic and hydrophobic regions .....	80
4.2.3. Surface characterization of OTS/APTES coated glass coverslips.....	81
4.2.4. Culture of C2C12 mouse myoblast cells on micropatterned substrates.....	82
4.2.5. Orientation order parameter calculation to understand alignment on micropatterned surfaces.....	82
4.2.6. Fluorescent staining of actin and nuclei on micropatterned surfaces and actin- orientation distribution analysis.....	82

<b>4.3. Results and discussion .....</b>	<b>83</b>
<b>4.3.1. Surface Analysis of FITC-APTES bonding over the glass substrates .....</b>	<b>83</b>
<b>4.3.2. Alignment of C2C12 myoblast cells .....</b>	<b>84</b>
<b>4.3.3. Orientation order parameter analysis supports the gradual alignment observation .....</b>	<b>87</b>
<b>4.3.4. Cytoskeletal actin staining and its orientation in micropatterned substrates .....</b>	<b>89</b>
<b>4.4 Summary .....</b>	<b>96</b>
<b>Chapter 5 Isolation, culture and characterisation of primary skeletal myoblasts</b>	
<b>5.1. Introduction .....</b>	<b>98</b>
<b>5.2. Materials and method .....</b>	<b>101</b>
<b>5.2.1. Materials.....</b>	<b>101</b>
<b>5.2.2. Dissection of lower hind limb muscles tibialis anterior and gastrocnemius</b>	<b>101</b>
<b>5.2.3. Enzymatic digestion of dissected skeletal muscles pieces.....</b>	<b>103</b>
<b>5.2.4. Mechanical trituration of the digested muscle.....</b>	<b>104</b>
<b>5.2.5. Coating gelatin on standard culture grade Petriplates .....</b>	<b>104</b>
<b>5.2.6. Plating of the cells on gelatin coated Petriplates.....</b>	<b>104</b>
<b>5.2.7. Bright field and immunofluorescence microscopy procedures .....</b>	<b>105</b>
<b>5.2.8. Assessment of purity of myoblasts in the culture .....</b>	<b>106</b>
<b>5.2.9. Live cell imaging of the myoblasts .....</b>	<b>106</b>
<b>5.2.10. Calcium dynamics of myoblasts and myotubes .....</b>	<b>106</b>
<b>5.2.11. Determination of twitch frequency of spontaneous contractions by kymograph based approach .....</b>	<b>107</b>
<b>5.3. Results and discussion .....</b>	<b>108</b>
<b>5.3.1. Isolation and culture of skeletal muscle.....</b>	<b>108</b>
<b>5.3.2. Pax7 based Immunofluorescence staining of the isolated cells confirms satellite cell origin .....</b>	<b>109</b>
<b>5.3.3. Live cell imaging and myoblast dynamics .....</b>	<b>111</b>
<b>5.3.4. Cytoskeletal actin staining of myoblasts and myotubes.....</b>	<b>112</b>
<b>5.3.5. Calcium dynamics in myoblasts and myotubes .....</b>	<b>114</b>
<b>5.3.6. Determination of spontaneous twitch frequency of the myotubes by using kymograph approach .....</b>	<b>116</b>
<b>5.4. Summary .....</b>	<b>118</b>
<b>Chapter 6 Influence of micropatterning on the alignment and differentiation of primary myoblasts</b>	
<b>6.1. Introduction .....</b>	<b>120</b>

<b>6.2. Materials and method .....</b>	<b>122</b>
<b>6.2.1. Materials.....</b>	<b>122</b>
<b>6.2.2. Isolation of satellite cells from rat hind limb skeletal muscle.....</b>	<b>122</b>
<b>6.2.3. Micropatterning of hydrophilic and hydrophobic regimes on glass substrates .....</b>	<b>123</b>
<b>6.2.4. Bright field and immunofluorescence microscopy .....</b>	<b>124</b>
<b>6.2.5. Myotube fusion and maturation indices.....</b>	<b>125</b>
<b>6.2.6. Average myotube diameter and nuclear analysis.....</b>	<b>125</b>
<b>6.2.7. Two-dimensional fast Fourier transform (2D FFT) based alignment analysis in myotubes .....</b>	<b>126</b>
<b>6.2.8. Two-dimensional fast Fourier transform (2D FFT) based alignment analysis of actin cytoskeleton in myotubes.....</b>	<b>128</b>
<b>6.2.9. Determination of twitch frequency of the spontaneous contraction in myotubes.....</b>	<b>128</b>
<b>6.2.10. Statistical Analysis.....</b>	<b>128</b>
<b>6.3. Results and discussion .....</b>	<b>129</b>
<b>6.3.1. Dynamics of satellite cells isolated from rat hind limb muscle.....</b>	<b>129</b>
<b>6.3.2. Micropatterning of satellite cells on glass substrates .....</b>	<b>129</b>
<b>6.3.3. OOP analysis and contact guidance-based alignment.....</b>	<b>135</b>
<b>6.3.4. Quantification of fusion and maturation indices .....</b>	<b>137</b>
<b>6.3.5. Myotube width and distribution of nuclei across the width of myotubes ....</b>	<b>142</b>
<b>6.3.6. Effective area of the nuclei present inside the myotube and unfused cells ..</b>	<b>144</b>
<b>6.3.7. Determination of twitch frequency of spontaneous contractions in myotubes .....</b>	<b>145</b>
<b>6.3.8. Analysis of myotube alignment using Two Dimensional Fast Fourier Transform (2D FFT) .....</b>	<b>148</b>
<b>6.3.9. Analysis of myotube alignment using Two Dimensional Fast Fourier Transform (2D FFT) using Actin Cytoskeleton: .....</b>	<b>150</b>
<b>6.4. Summary .....</b>	<b>152</b>
<b>Chapter 7 Conclusions and future scope of work.....</b>	<b>154</b>
<b>References .....</b>	<b>159</b>
<b>Permission from Central Animal Ethical Committee .....</b>	<b>198</b>
