<b>Contents</b>	<b>Page No.</b>
Certificates	ii-iv
Acknowledgments	v-vi
Contents	vii-ix
List of Figures	x-xi
List of tables	xii
Abbreviations	xiii
Preface	xiv-xv
<b>1 Introduction</b>	<b>1-24</b>
1.1 Membrane separation processes	1
1.2 Type of membrane separation processes	2
1.2.1 Microfiltration	3
1.2.2 Ultrafiltration	3
1.2.3 Nanofiltration	4
1.2.4 Reverse osmosis	5
1.3 Membrane	7
1.4 Factors affecting membrane performance	7
1.4.1 Pore size	7
1.4.2 Permeability	8
1.4.3 Rejection	8
1.4.4 Mechanical properties	8
1.4.5 Chemical resistance	9
1.5 Types of membranes	9
1.6 Filtration patterns	12
1.7 Synthesis of membranes	13
1.7.1 Phase inversion	14
1.7.1.1 Non-solvent induced phase separation	15
1.7.1.2 Evaporation induced phase separation	16
1.7.1.3 Thermally induced phase separation	16
1.7.1.4 Vapor induced phase separation	16
1.7.2 Stretching	17
1.7.3 Track-etching	17
1.7.4 Electro-spinning	18
1.8 Membrane Fouling	21
<b>2 Literature Review</b>	<b>25-51</b>
2.1 Membrane modification by nanofillers	26
2.2 Membrane modification by copolymers	37

2.3	Membrane modification by pore formers	42
2.4	Summary of literature review and research gap	50
2.5	Research objective	51
<b>3</b>	<b>Materials and methods</b>	<b>52-59</b>
3.1	Membrane preparation	52
3.2	Membrane characterization techniques	53
3.2.1	Scanning electron microscope	54
3.2.2	Energy-dispersive X-ray spectroscopy	54
3.2.3	X-Ray Diffraction	54
3.2.4	Thermo gravimetric analysis	54
3.2.5	Contact angle analysis	55
3.2.6	Porosity	56
3.2.7	Mean pore radius	56
3.3	Performance study and antifouling analysis	56
<b>4</b>	<b>Synthesis, characterization and application of PVC/Nano-alumina composite membrane</b>	<b>60-84</b>
4.1	Introduction	60
4.2	Materials and Methods	62
4.2.1	Materials	62
4.2.2	Preparation of composite membranes	62
4.2.3	Characterization methods	64
4.2.4	Performance study and antifouling analysis	65
4.3	Result and discussions	66
4.3.1	SEM and EDS analysis	66
4.3.2	Thermal Gravimetric analysis	69
4.3.3	XRD analysis	70
4.3.4	Mechanical Properties	72
4.3.5	Contact angle analysis	73
4.3.6	Porosity and Mean pore radius analysis	73
4.3.7	Performance studies	74
4.3.8	Fouling parameter study	76
4.3.9	Rejection rate	80
4.3.10	Flux recovery	81
4.3.11	Relative Flux	82
4.3.12	Membrane resistance	83
4.4	Conclusions	84

<b>5</b>	<b>Synthesis, characterization and application of PVC/Nano-bentonite composite membrane</b>	<b>85-107</b>
5.1	Introduction	85
5.2	Materials and Methods	87
5.2.1	Materials	87
5.2.2	Preparation of composite membranes	87
5.2.3	Characterization methods	88
5.2.4	Performance study and antifouling analysis	89
5.3	Result and discussions	89
5.3.1	SEM and EDS analysis	89
5.3.2	Thermal Gravimetric analysis	93
5.3.3	XRD analysis	94
5.3.4	Mechanical Properties	96
5.3.5	Contact angle analysis	96
5.3.6	Porosity and Mean pore radius analysis	97
5.3.7	Performance studies	98
5.3.8	Fouling parameter study	101
5.3.9	Rejection rate	103
5.3.10	Flux recovery	104
5.3.11	Relative Flux	105
5.3.12	Membrane resistance	106
5.4	Conclusions	107
<b>6</b>	<b>Conclusions</b>	<b>108-109</b>
	<b>References</b>	<b>110-124</b>
	<b>List of publications</b>	<b>125</b>
