<i>Preface</i>	<i>xxi</i>
Chapter 1 Introduction	1-21
1.1 Background and problem statement	1
1.2 Biomass as a source of renewable energy	3
1.2.1 Components of biomass	4
1.2.1.1 Cellulose	5
1.2.1.2 Hemicellulose	5
1.2.1.3 Lignin	6
1.2.1.4 Organic extractives	7
1.2.1.5 Inorganic minerals	8
1.3 Extraction of energy from biomass	8
1.3.1 Thermochemical conversion of biomass	8
1.3.1.1 Pyrolysis of biomass	8
1.3.1.2 Combustion of biomass	9
1.3.1.3 Liquefaction of biomass	10
1.3.1.4 Gasification of biomass	10
1.4 Demerits of raw biomass	10
1.5 Pretreatment of raw biomass	12
1.5.1 Physical pretreatment	13
1.5.2 Biological pretreatment	13
1.5.3 Chemical pretreatment	14
1.5.4 Thermochemical pretreatment	15
1.5.4.1 Torrefaction of biomass	15
1.6 Characteristics of torrefied biomass	17
1.7 Application of biochar from pyrolysis of biomass	20
1.8 Structure of thesis	20
Chapter 2 Literature Review and Objectives	22-48

2.1	Literature review	22
2.1.1	Torrefaction of biomass and optimization of torrefaction process	22
2.1.1.1	Torrefaction of biomass	22
2.1.1.1.1	Effect of torrefaction on proximate and ultimate analysis of biomass	23
2.1.1.1.2	Effect of torrefaction on mass yield, energy yield and higher heating value of biomass	27
2.1.1.1.3	Effect of torrefaction on grindability and moisture absorption capacity of biomass	31
2.1.1.2	Optimization of torrefaction process	33
2.1.2	Pyrolysis of raw and torrefied biomass and optimization of process parameters	36
2.1.2.1	Pyrolysis of raw biomass and optimization of process parameters	36
2.1.2.2	Pyrolysis of torrefied biomass	40
2.1.2.2.1	Effect of torrefaction on kinetics of biomass during pyrolysis	40
2.1.2.2.2	Effect of torrefaction on product distribution during pyrolysis of biomass	42
2.1.3	Application of biochar from pyrolysis of biomass for removal of aqueous methylene blue	44
2.2	Objectives	47
Chapter 3	Torrefaction of woody biomass (<i>Acacia nilotica</i>): Investigation of fuel and flow properties to study its suitability as a good quality solid fuel	49-86
3.1	Introduction	50
3.2	Experimental section	53
3.2.1	Materials	53
3.2.2	Experimental setup and procedure for torrefaction	53
3.2.3	Physicochemical properties of raw and torrefied biomass	57
3.2.3.1	Proximate and ultimate analysis	57
3.2.3.2	Density, porosity, and particle size of raw and torrefied biomass	58
3.2.3.3	Moisture sorption test of raw and torrefied biomass	60
3.2.3.3.1	Open environment test	60
3.2.3.3.2	Contact angle measurement	61
3.2.3.4	Flowability and combustion indices of raw and torrefied biomass	61
3.2.3.5	Analytical instruments used to characterize raw and torrefied biomass	61
3.3	Results and discussion	62

3.3.1	Solid product and energy yield of torrefied biomass	62
3.3.2	Physicochemical Characteristics of raw and torrefied products	64
3.3.3	Density, porosity, and particle size of raw and torrefied biomass	70
3.3.4	Moisture sorption characteristics of raw and torrefied biomass	75
3.3.5	Flowability of raw and torrefied biomass	77
3.3.6	Combustion indices of raw and torrefied biomass	79
3.3.7	Thermogravimetric analysis	80
3.3.8	FTIR analysis of raw and torrefied biomass	82
3.3.9	SEM-EDX analysis of raw and torrefied biomass	83
3.4	Conclusions	86
Chapter 4	Intrinsic kinetics, thermodynamic parameters and reaction mechanism of non-isothermal degradation of torrefied <i>Acacia nilotica</i> using isoconversional methods	87-121
4.1	Introduction	88
4.2	Materials and methods	89
4.2.1	Material collection, preparation and characterization	89
4.2.2	Experimental procedure for torrefaction and pyrolysis of torrefied biomass	89
4.2.3	Kinetic analysis	90
4.2.4	Model-free isoconversional methods	92
4.2.4.1	Kissinger-Akahira-Sunose (KAS) method	92
4.2.4.2	Ozawa-Wall- Flynn (OWF) method	93
4.2.4.3	Friedman method	93
4.2.4.4	Starink method	94
4.2.5	Prediction of reaction model	95
4.2.6	Estimation of pre-exponential factor and thermodynamic parameters	97
4.3	Results and discussion	98
4.3.1	Yield of product and physicochemical characteristics of DAN and torrefied biomass	98
4.3.2	Thermogravimetric analysis	99
4.3.3	Kinetic analysis	104
4.3.4	Prediction of reaction mechanism (Criado analysis)	112
4.3.4.1	Reaction mechanism at lower conversion ($\alpha < 0.5$)	114
4.3.4.2	Reaction mechanism at higher conversion ($\alpha > 0.5$)	115

4.3.5	Thermodynamic parameters	116
4.4	Conclusions	121
Chapter 5	Optimization of process parameters for torrefaction of <i>Acacia nilotica</i> using response surface methodology and characteristics of torrefied biomass as upgraded fuel	122-153
5.1	Introduction	123
5.2	Materials and methods	124
5.2.1	Sample preparation	124
5.2.2	Experimental design using RSM	124
5.2.3	Experimental setup and torrefaction procedure	127
5.2.4	Characteristics of raw and torrefied biomass	128
5.3	Results and discussion	129
5.3.1	Solid product yield and Energy yield	129
5.3.2	Response surface analysis for HHV and EY of Torrefied biomass	130
5.3.3	Optimization of HHV and EY of Torrefied biomass	138
5.3.4	Physical and chemical properties of raw and torrefied biomass	140
5.3.5	Fuel and flow properties of torrefied biomass	142
5.3.6	BET surface area and density of raw and torrefied biomass	143
5.3.7	Thermogravimetric analysis	144
5.3.8	Fourier transform infrared spectroscopy (FTIR)	146
5.3.9	SEM and EDX analysis	147
5.3.10	X-Ray diffraction (XRD) analysis	149
5.3.11	Moisture absorption	151
5.4	Conclusions	152
Chapter 6	Pyrolysis of torrefied biomass: Optimization of process parameters using response surface methodology, characterization, and comparison of properties of pyrolysis oil from raw biomass	154-199
6.1	Introduction	155
6.2	Experimental segment	157
6.2.1	Sample preparation	157
6.2.2	Design of experimental condition using RSM	157
6.2.3	Experimental procedure for pyrolysis	161
6.2.4	Analysis of pyrolysis oil, biochar and pyrolytic gases obtained at optimum condition of pyrolysis	162

6.3	Results and discussion	163
6.3.1	Statistical analysis of developed model	163
6.3.2	Effect of process variables on yield of pyrolysis oil	165
6.3.2.1	Individual effect of process parameters	165
6.3.2.2	Interaction effect of process parameters based on RSM on yield of pyrolysis oil	166
6.3.3	Validation of process parameters for yield of pyrolysis oil	172
6.3.4	Yield of pyrolysis oil, biochar and pyrolytic gases at optimum condition from pyrolysis of DAN and TAN-252-60-5	173
6.3.5	Characteristics of pyrolysis oil obtained at optimum condition of pyrolysis	175
6.3.5.1	Fourier transform infrared spectroscopy of pyrolysis oil	175
6.3.5.2	Gas chromatography-mass spectrometry analysis pyrolysis oil	176
6.3.5.3	¹³ C NMR analysis of pyrolysis oil	181
6.3.5.4	Physicochemical characteristics of pyrolysis oil	185
6.3.6	Characteristics of biochar obtained at optimum condition from pyrolysis of DAN and TAN-252-60-5	187
6.3.6.1	Proximate and ultimate analyses of biochar	187
6.3.6.2	SEM-EDX analysis of biochar	188
6.3.6.3	FTIR analysis of biochar	189
6.3.7	Characteristics of pyrolytic gases obtained at optimum condition from pyrolysis of DAN and TAN-252-60-5	191
6.3.8	Mechanism of pyrolysis of TAN-252-60-5	193
6.3.9	Sustainability of integrated torrefaction-pyrolysis process and implication for cleaner production of pyrolysis oil	194
6.4	Conclusions	198
Chapter 7	Comparative study for removal of aqueous methylene blue using biochar from pyrolysis of raw and torrefied biomass: kinetics, isotherm, thermodynamics and mass transfer studies	200-242
7.1	Introduction	201
7.2	Material and methods	203
7.2.1	Material	203
7.2.2	Experimental procedure for preparation of biochar from pyrolysis of DAN and TAN-252-60-5	203
7.2.3	Characterization of biochar obtained from pyrolysis of DAN and TAN-252-60-5	203
7.2.4	Experimental procedure for removal of MB by batch adsorption	205

	process	
7.3	Results and discussion	206
7.3.1	Characteristics of adsorbent Biochar-DAN and Biochar-TAN	206
7.3.1.1	Proximate and ultimate analyses of Biochar-DAN and Biochar-TAN	206
7.3.1.2	Point of zero charge (pH_{pzc}) for Biochar-DAN and Biochar-TAN	206
7.3.1.3	XRD analysis of Biochar-DAN and Biochar-TAN	207
7.3.1.4	BET surface area and SEM-EDX analysis of Biochar-DAN and Biochar-TAN	209
7.3.1.5	FTIR analysis of biochar Biochar-DAN and Biochar-TAN	212
7.3.2	Batch adsorption analysis of MB onto Biochar-DAN and Biochar-TAN	216
7.3.2.1	Effect of contact time and initial concentration of MB	216
7.3.2.2	Effect of pH of solution and adsorbent dose	219
7.3.3	Kinetics and mass transfer study for adsorption of MB onto Biochar-DAN and Biochar-TAN	220
7.3.3.1	Adsorption kinetics	220
7.3.3.2	Mass transfer models	227
7.3.3.2.1	Weber and Morris model	227
7.3.3.2.2	Boyd model	228
7.3.4	Effect of temperature and isotherms for adsorption of MB onto Biochar-DAN and Biochar-TAN	231
7.3.5	Thermodynamic parameters for adsorption of MB onto Biochar-DAN and Biochar-TAN	237
7.3.6	Possible mechanism for adsorption of MB onto biochars	239
7.4	Conclusions	241
Chapter 8	Summary of thesis and scope for future work	243-248
8.1	Summary of thesis	244
8.2	Scope for future work	248
	References	249-269
	Publications and Conferences
