

List of Figures

1.1	Percentage rice production in the world.....	7
1.2	Rice straw after harvesting.....	8
1.3	Rural and Urban population in India.....	9
2.1	SEM images of specimens with (a) 100% PC (b) 85% PC & 15% MK (c) 75% PC & 25% MK [61]	20
2.2	SEM images of specimens with (a) 100% cement (b) 90% cement & 10% RHA [79].....	22
2.3	SEM images of specimen with (a) 100% OPC (b) 9%-40 nm NS [125]	31
2.4	SEM images of specimen with (a) 100% OPC (b) 15% RHA (c) 20% MK (d) 15% RHA + 15% MK [170].....	45
2.5	Processing of SBA for its usage as an SCM [199]... ..	57
2.6	Carbonation of concrete (after 200 days) with (a) 100% OPC (b) 2.5% NS (c) 5% NS (d) 7.5% NS (e) 2.5% MS (f) 5% MS (g) 7.5% MS (Massana et al. 2018) [217].....	64
3.1	Flowchart of the Research.....	74
3.2	Le Chatelier flask for determining density/specific gravity of OPC/RSA/MS.....	79
3.3	Blaine air permeability apparatus for specific surface area of OPC.....	80
3.4	ARL OPTIM X X-Ray Analyzer for XRF analysis of OPC/RSA/MS...	80
3.5	CIS-50 ANKERSMID particle size analyser for particle size distribution of OPC, RSA and MS.....	80
3.6	Rigaku Ultima IV X-Ray Diffractometer for XRD analysis.....	81
3.7	FEI QUANTA 450 Scanning Electron Microscope for SEM analysis...	81
3.8	NETZSCH Thermo Gravimetric Analyser for TGA analysis of RSA...	81
3.9	Vicat's apparatus with different attachments for consistency and setting times tests.....	82
3.10	(a) RIGAKU SmartLab X-Ray Diffractometer for XRD analysis of different specimens (b) Cementitious paste cake prepared for their XRD analysis.....	84

3.11	Marsh cone test.....	85
3.12	(a) Indian standard sand of different grades (b) Curing of mortar cubes (c) Compressive strength test of mortar cube.....	87
3.13	Slump test of concrete.....	89
3.14	(a) Casting (b) Demoulding (c) Curing (d) Compressive strength test of 150 mm size concrete cubes.....	90
3.15	(a) Flexural strength test setup (b) Position of support and load rollers marked on the beam.....	91
3.16	Dimensions of concrete cylinder and load position.....	92
3.17	FEI Nova NANOSEM 450 Scanning Electron Microscope for microstructural analysis of concrete specimens.....	94
3.18	LEICA optical microscope for petrographic study of concrete specimens.....	94
3.19	Set-up for air entrainment of fresh concrete.....	95
3.20	Setup for rate and coefficient of water absorption test of concrete.....	97
3.21	(a) Slab casting (b) Chloride ion penetration test of the concrete slab by ponding method (c) Drilled holes of 10-20 mm and 25-35 mm depth to obtain samples for chloride ion penetration test.....	98
3.22	(a) Concrete cubes under acidic solution (b) Concrete Cubes washed with potable water after HCl solution (left) and H ₂ SO ₄ solution (right) immersion.....	100
3.23	Concrete prisms in a carbonation chamber for ACC.....	102
4.1	Particle size distribution of OPC, RSA and MS.....	109
4.2	XRD pattern of OPC, RSA and MS.....	111
4.3	SEM micrographs of OPC, RSA and MS at different magnification levels.....	112
4.4	TGA analysis of RSA.....	114
5.1	Comparison between normal consistency of cement paste of various mixtures.....	120

5.2	Comparison between initial setting times of cement paste of various mixes.....	121
5.3	Comparison between final setting times of cement paste of multiple mixes.....	122
5.4	Comparison between expansion in cement paste of various mixtures....	124
5.5	Comparison between HRWR dosages for cement mortar of various mixtures.....	126
5.6	XRD diffractograms of OPC-RSA paste.....	128
5.7	XRD diffractograms of OPC-MS paste.....	129
5.8	Graphical comparisons between compressive strength of mortar at various ages of water curing.....	131
5.9	Compressive strength of mortar at 3 days of water curing.....	134
5.10	Compressive strength of mortar at 7 days of water curing.....	134
5.11	Compressive strength of mortar at 28 days of water curing.....	135
5.12	Compressive strength of mortar at 60 days of water curing.....	135
5.13	Compressive strength of mortar at 90 days of water curing.....	136
5.14	Compressive strength of mortar at 365 days of water curing.....	136
5.15	Graphical comparisons between hardened densities of mortar at various ages of water curing.....	138
6.1	Graphical comparison of compressive strength of concrete at various ages of water curing.....	144
6.2	Relative percentage change in compressive strength of admixed concrete w.r.t. control concrete (R0)	145
6.3	Graphical comparison of flexural strength of concrete at various ages of water curing.....	148
6.4	Relative percentage change in flexural strength of admixed concrete w.r.t. control concrete (R0)	149
6.5	Graphical comparison of split tensile strength of concrete at various ages of water curing.....	151

6.6	Relative percentage change in split tensile strength of admixed concrete w.r.t. control concrete (R0)	152
6.7	XRD diffractograms of control concrete (R0) and concrete of mix R10, R5M5, R5M7.5, R10M5 and R10M7.5.....	154
6.8	SEM micrograph of control concrete (R0) at 7, 28 and 90 days of curing at 10,000 (left) and 20,000 (right) times magnification levels.....	156
6.9	SEM micrograph of control concrete (R10) at 7, 28 and 90 days of curing at 10,000 (left) and 20,000 (right) times magnification levels.....	158
6.10	SEM micrograph of control concrete (R10M5) at 7, 28 and 90 days of curing at 10,000 (left) and 20,000 (right) times magnification levels.....	160
6.11	SEM micrograph of control concrete (R10M7.5) at 7, 28 and 90 days of curing at 10,000 (left) and 20,000 (right) times magnification levels.	161
6.12	SEM micrograph of control concrete (R5M5) at 7, 28 and 90 days of curing at 10,000 (left) and 20,000 (right) times magnification levels.....	162
6.13	SEM micrograph of control concrete (R5M7.5) at 7, 28 and 90 days of curing at 10,000 (left) and 20,000 (right) times magnification levels.....	163
6.14	Thin section photomicrographs of R0 after 28 days of water curing.....	165
6.15	Thin section photomicrographs of R10 after 28 days of water curing....	166-167
6.16	Thin section photomicrographs of R10M5 after 28 days of water curing.....	169-170
6.17	Thin section photomicrographs of R10M7.5 after 28 days of water curing.....	171-172
6.18	Thin section photomicrographs of R5M5 after 28 days of water curing.	173-174
6.19	Thin section photomicrographs of R5M7.5 after 28 days of water curing.....	175-177
6.20	Comparison between compressive strength (f_c) and flexural strength (f_r)	180
6.21	Comparison between compressive strength (f_c) and split tensile strength (f_t)	183
6.22	Comparison between flexural strength (f_r) and split tensile strength (f_t).....	186

7.1	Saturated water absorption of various mix of concrete.....	195
7.2	Initial rate of water absorption of various mix of concrete.....	197
7.3	Secondary rate of water absorption of various mix of concrete.....	197
7.4	Coefficient of water absorption of various mix of concrete.....	201
7.5	Percentage of chloride ions at 10-20 mm depth in concrete of different mix.....	203
7.6	Percentage of chloride ions at 25-35 mm depth in concrete of different mix.....	203
7.7	Percentage loss of mass in concrete.....	207
7.8	Compressive strength of concrete mixes at different curing conditions..	210
7.9	Loss of compressive strength of concrete mixes at different curing conditions.....	211
7.10	Cubes of (a) control and MS admixed concrete (b) RSA admixed and RSA-MS admixed concrete after 28 days of water curing and 30 days in H ₂ SO ₄ solution.....	215
7.11	Cubes of (a) control and MS admixed concrete (b) RSA admixed and RSA-MS admixed concrete after 28 days in water and 30 days in HCl solution.....	216
7.12	Concrete cubes of mix (a) M10 (10% MS) (b) R5M5 (5% RSA and 5% MS) (c) R10 (10% RSA) after 28 days of water curing and 30 days in H ₂ SO ₄ solution.....	218
7.13	Concrete cubes of mix (a) M10 (10% MS) (b) R5M5 (5% RSA and 5% MS) (c) R10 (10% RSA) after 28 days of water curing and 30 days in HCl solution.....	219
7.14	XRD analysis of concrete of mix R0, R10, M7.5, R5M7.5 and R10M7.5 at 365 days of water curing and 30 days of HCl immersion...	220
7.15	XRD analysis of concrete of mix R0, R10, M7.5, R5M7.5 and R10M7.5 at 365 days of water curing and 30 days of H ₂ SO ₄ immersion.....	222
7.16	SEM micrographs of concrete of mix (a) R0 (b) R10 (c) M7.5 (d) R5M7.5 (e) R10M7.5 at 365 days of water curing and 30 days of HCl immersion.....	226

7.17	SEM micrographs of concrete of mix (a) R0 (b) R10 (c) M7.5 (d) R5M7.5 (e) R10M7.5 at 365 days of water curing and 30 days of H ₂ SO ₄ immersion.....	227
7.18	Graphs showing the effect of accelerated carbonation curing on (a) Compressive strength (b) Flexural strength (c) Split tensile strength.....	228-229
7.19	Comparison of carbonation depth and compressive strength at 28 days of combined curing.....	234
7.20	Depth of carbonation in concrete of mix (a) R0 (b) R10 (c) M2.5 (d) M5 (e) M7.5 (f) M10 (g) R5M5 (h) R5M7.5 (i) R10M5 (j) R10M7.5...	235-236
7.21	Predictive charts of the various mix for M40 grade PQC (a) R0 (b) R10 (c) M2.5 (d) M5 (e) M7.5 (f) M10 (g) R5M5 (h) R5M7.5 (i) R10M5 (j) R10M7.5.....	242-246
