List of Tables

1.1 Average reduct size using state-of-the-art methods 18

2.1 Parameters used in Elitist Genetic Algorithm (eGA) 24

2.2 Description of used benchmark datasets 25

2.3 Result for Ecoli dataset for 10 independent runs 26

2.4 Result for Glass dataset for 10 independent runs 28

2.5 Result for Wisconsin dataset for 10 independent runs 29

2.6 Result for Cleveland dataset for 10 independent runs 30

2.7 Average Reduct sizes using different methods 32

2.8 MAPE for representative weeks with and without feature selection 34

2.9 Comparison of proposed results with other methods 35

3.1 Sample dataset 1 38

3.2 Sample Dataset 2: discretized version of sample dataset 1 38

3.3 Rough Dependency Measure 41

3.4 Rough and Fuzzy Rough Dependency Measure 45

4.1 Initialization of solutions for random and proposed DS-initialization method 54

4.2 Description of benchmark datasets 56

4.3 PSO-DS with RST measure: Comparison of reduct size and classification accuracy with statistical t-test, and Wilcoxon test. [Classification accuracy is denoted as 'CA'. Statistical t-test is denoted as 'S'. Wilcoxon test is denoted as 'WT'. Mean Subset Size is denoted as 'MSS'.] 59

4.4 IDS-DS with RST measure: Comparison of reduct size and classification accuracy with statistical t-test, and Wilcoxon test. [Classification accuracy is denoted as 'CA'. Statistical t-test is denoted as 'S'. Wilcoxon test is denoted as 'WT'. Mean Subset Size is denoted as 'MSS'.] 60
4.5 Statistical analysis of number of generations taken by the dataset for converging to a solution for PSO with RST measure 62
4.6 Statistical analysis of number of generations taken by the dataset for converging to a solution for IDS with RST measure 62
4.7 Friedman ranking with RST measure 63
4.8 PSO-DS with L-FRFS measure: Comparison of reduct size and classification accuracy with statistical t-test, and Wilcoxon test. [Classification accuracy is denoted as 'CA'. Statistical t-test is denoted as 'S'. Wilcoxon test is denoted as 'WT'. Mean Subset Size is denoted as 'MSS'.] 65
4.9 IDS-DS with L-FRFS measure: Comparison of reduct size and classification accuracy with statistical t-test, and Wilcoxon test. [Classification accuracy is denoted as 'CA'. Statistical t-test is denoted as 'S'. Wilcoxon test is denoted as 'WT'. Mean Subset Size is denoted as 'MSS'.] 66
4.10 Statistical analysis of number of generations taken by the dataset for converging to a solution for PSO with L-FRFS measure 68
4.11 Statistical analysis of number of generations taken by the dataset for converging to a solution for IDS with L-FRFS measure 69
4.12 Friedman ranking with L-FRFS measure 69

5.1 Hybrid-P with RST measure: Comparison of reduct size and classification accuracy with statistical t-test, and Wilcoxon test. [Classification accuracy is denoted as 'CA'. Statistical t-test is denoted as 'S'. Wilcoxon test is denoted as 'WT'. Mean Subset Size is denoted as 'MSS'.] 78
5.2 Hybrid-S with RST measure: Comparison of reduct size and classification accuracy with statistical t-test, and Wilcoxon test. [Classification accuracy is denoted as 'CA'. Statistical t-test is denoted as 'S'. Wilcoxon test is denoted as 'WT'. Mean Subset Size is denoted as 'MSS'.] 79
5.3 Friedman ranking with RST measure 80

5.4 Hybrid-P with L-FRFS measure: Comparison of reduct size and classification accuracy with statistical t-test, and Wilcoxon test. [Classification accuracy is denoted as 'CA'. Statistical t-test is denoted as 'S'. Wilcoxon test is denoted as 'WT'. Mean Subset Size is denoted as 'MSS'.] 83

5.5 Hybrid-S with L-FRFS measure: Comparison of reduct size and classification accuracy with statistical t-test, and Wilcoxon test. [Classification accuracy is denoted as 'CA'. Statistical t-test is denoted as 'S'. Wilcoxon test is denoted as 'WT'. Mean Subset Size is denoted as 'MSS'.] 84

5.6 Friedman ranking with L-FRFS measure 86

6.1 BO with RST measure: Comparison of reduct size with statistical t-test, and Wilcoxon test. [Statistical t-test is denoted as 'S'. Wilcoxon test is denoted as 'WT'. Mean Subset Size is denoted as 'MSS'.] 96

6.2 BO with RST measure: Comparison of classification accuracy with statistical t-test, and Wilcoxon test. [Classification accuracy is denoted as 'CA'. Statistical t-test is denoted as 'S'. Wilcoxon test is denoted as 'WT'.] . . . 97

6.3 Friedman ranking for BO and hybrid methods with RST measure 98

6.4 BO with L-FRFS measure: Comparison of reduct size with statistical t-test, and Wilcoxon test. [Statistical t-test is denoted as 'S'. Wilcoxon test is denoted as 'WT'. Mean Subset Size is denoted as 'MSS'.] 99

6.5 BO with L-FRFS measure: Comparison of classification accuracy with statistical t-test, and Wilcoxon test. [Classification accuracy is denoted as 'CA'. Statistical t-test is denoted as 'S'. Wilcoxon test is denoted as 'WT'.] 100

6.6 Friedman ranking with L-FRFS measure 101

7.1 AGA-MO with RST measure: Comparison of reduct size with statistical t-test, and Wilcoxon test. [Statistical t-test is denoted as 'S'. Wilcoxon test is denoted as 'WT'. Mean Subset Size is denoted as 'MSS'.] 107

7.2 AGA-MO with RST measure: Comparison of classification accuracy with statistical t-test, and Wilcoxon test. [Classification accuracy is denoted as 'CA'. Statistical t-test is denoted as 'S'. Wilcoxon test is denoted as 'WT'.] 108

7.3 Friedman ranking with RST measure 109

7.4 AGA-MO with L-FRFS measure: Comparison of reduct size with statistical t-test, and Wilcoxon test. [Statistical t-test is denoted as 'S'. Wilcoxon test is denoted as 'WT'. Mean Subset Size is denoted as 'MSS'.] 111
7.5 AGA-MO with L-FRFS measure: Comparison of classification accuracy with statistical t-test, and Wilcoxon test. [Classification accuracy is denoted as 'CA'. Statistical t-test is denoted as 'S'. Wilcoxon test is denoted as 'WT'.] 112
7.6 Friedman ranking with L-FRFS measure 113

8.1 Best known result for each dataset along with their description 118
