List of Titles

Chapter-1	Overview of Some Main Class of Nitrogen, Oxygen and Sulphur Containing Heterocyclic Compounds	1-50
	1.1 Thiadiazole	6
	1.1.1 Synthesis of 1,2,4-Thiadiazoles by Cyclization	7
	1.1.2 Synthesis of 1,2,4-Thiadiazoles by Dimerization of Thioamides	8
	1.1.3 Synthesis of 1,2,4-Thiadiazoles through Condensation Reactions	10
	1.2 Coumarin	11
	1.2.1 Wittig Reaction	13
	1.2.2 Perkin Reaction	14
	1.2.3 Baylis-Hillmann Reaction	14
	1.2.4 Pechmann Condensation	15
	1.2.5 Knoevenagel Condensation	16

	1.3 Imidazo[1,2-a]pyridine	17
	1.3.1 Multicomponent Approach	21
	1.3.2 Tandem Reaction	22
	1.3.3 Aminooxygenation	23
	1.3.4 Hydroamination	23
	1.3.5 Oxidative Coupling	24
	1.3.6 Condensation Reaction	24
	1.4 4 <i>H</i> -pyran	26
	1.5 Objectives of Thesis Work	29
	1.6 References	31
Chapter – 2	Synthesis of 1,2,4-Thiadiazoles and 1,2,4-Selenodiazoles by the Dimerization of Primary Thioamides and Selenoamides	51-90
	2.1 Introduction	51
	2.2 Results and Discussion	54
	2.3 Mechanistic Studies and Control Experiment	62
	2.4 Development of Another Methodology	63
	2.4.1 Optimization of Reaction Condition with Chloranil	65
	2.5 Mechanistic Studies and Control Experiment with TEMPO	69
	2.6 Experimental Section	70
	2.6.1 Experimental procedure for the dimerization of benzothioamides using TBN	70
	2.6.2 Experimental procedure for the dimerization of benzoselenoamide	71
	2.6.3 Experimental procedure for control experiment with TEMPO	71
	2.6.4 Experimental procedure for the dimerization of benzothioamides using chloranil	72

	2.7 Analytical Data	72
	2.8 Spectral Data of Synthesized Products	79
	2.9 References	81
Chapter – 3	A Practical Synthesis of 3-Functionalized Coumarins from <i>o</i>-Cresols and Active Methylene Compounds under Metal and Catalyst-Free Conditions using <i>tert</i>-Butyl Hydrogen Peroxide	91-124
	3.1 Introduction	91
	3.2 Results and Discussion	94
	3.3 Mechanistic Studies & Control Experiment	99
	3.4 Plausible Reaction Mechanism	102
	3.5 Scalability of the Protocol	102
	3.6 Experimental Section	103
	3.6.1 General procedure for the synthesis of coumarin derivatives (3a-s)	103
	3.6.2 General procedure for the synthesis of 5a-e	103
	3.6.3 Procedure for control experiment with TEMPO	104
	3.6.4 Gram-scale procedure for the synthesis of coumarin derivatives	104
	3.7 Analytical Data	105
	3.8 Spectral Data of Synthesized Products	114
	3.9 References	116
Chapter-4	Development of a Scalable Route for the Synthesis of Imidazo[1,2-a]pyridines under Metal and Solvent Free Conditions	125-156
	4.1 Introduction	125
	4.2 Results and Discussion	130
	4.3 Plausible Reaction Mechanism	137
	4.4 Scalability of the Protocol	138

	4.5 Experimental Section	139
	4.5.1 General procedure for the synthesis of products	139
	4.5.2 Procedure for gram scale synthesis	139
	4.5.3 Procedure for control experiment with TEMPO	139
	4.6 Analytical Data	140
	4.7 Spectral Data of Synthesized Products	148
	4.8 References	149
Chapter – 5	Solar Energy Mediated Green Synthesis of Tetrahydrobenzo[b]pyran using L-Ascorbic Acid as an Organocatalyst in Aqueous Medium	157-192
	5.1 Introduction	157
	5.2 Results and Discussion	161
	5.3 Mechanistic Study	171
	5.4 Plausible Reaction Mechanism	173
	5.5 Gram Scale Synthesis of Tetrahydrobenzo[b]pyran	174
	5.6 Experimental Section	175
	5.6.1 General procedure for the synthesis of compounds (4a-4x)	175
	5.6.2 Gram-scale procedure	175
	5.6.3 Procedure for the controlled experiment with TEMPO	176
	5.7 Analytical Data	176
	5.8 Spectral Data of 4a	186
	5.9 References	187
Summary and Conclusions		193-196
