

## List of Table

Table No.	Table Caption	Page No.
<b>Table 1.1:</b>	Model classification [10]	6
<b>Table 2.1:</b>	IMC filter structure suggested by various researchers for different process models.	25
<b>Table 2.2:</b>	Different control algorithm used in temperature control of bioreactor and their closed-loop performance	30
<b>Table 3.1:</b>	Steady-state operating parameter of CSTR [85]	36
<b>Table 3.2:</b>	Bioreactor model parameters	43
<b>Table 3.3:</b>	Steady-state operating parameters	44
<b>Table 3.4:</b>	Different tuning rules for PI controller and their parameters	50
<b>Table 4.1:</b>	Time integral performance indices comparison with different process models	74
<b>Table 4.2:</b>	The PID parameters of the different tuning methods and the corresponding robustness ( $M_s$ )	76
<b>Table 4.3:</b>	Comparison of closed-loop performance of example 1-6 using different methods	77
<b>Table 4.4:</b>	PID parameters and performance for the servo as well as the regulatory problem of different tuning methods.	85
<b>Table 4.5:</b>	PID parameters and performance for the servo as well as the regulatory problem of different tuning methods	88
<b>Table 4.6:</b>	PID parameters and performance parameters for the servo as well as the regulatory problem of different tuning methods.	90
<b>Table 4.7:</b>	PID parameters and performance parameters for the servo as well as the regulatory problem of different tuning methods	93
<b>Table 4.8:</b>	PID parameters and performance parameters for the servo as well as the regulatory problem of different tuning methods	95

**Table 4.9:** PID parameters and performance parameters for the servo as well as the regulatory problem of different tuning methods. 97

**Table 4.10:** PID parameters and performance of the controller for the process model 99
