Synopsis
List of Publications
List of Figures
List of Tables

Chapter 1	Introduction	1-11
1.1	Natural bone	1
1.2	Biomaterial	2
1.3	Hydroxyapatite (HA), 45S5 bioglass and 1393 bioglass as the matrix	2
1.4	Sodium potassium niobate ($\text{Na}_{0.5}\text{K}_{0.5}\text{NbO}_3$; NKN) as piezoelectric secondary phase	3
1.5	Mechanical properties	3
1.6	Dielectric and electrical properties	4
1.7	Antibacterial behavior	4
1.8	Cellular response	4
1.9	Objectives	5
1.10	structure of the thesis	6
Chapter 2	Literature Review	13-61
2.1	Introduction	13
2.2	Toughening mechanisms	15
2.2.1	Crack deflection	17
2.2.2	Crack bridging	17
2.2.3	Micro-crack toughening	18
2.2.4	Transformation toughening	19
2.3	Piezoelectric contribution to the toughening mechanism	20
2.3.1	Electromechanical coupling coefficient	21
2.3.2	Energy dissipation mechanism	21
2.3.3	Domain switching	22
2.3.3.1	Criterion for the domain switching	23
2.4	Effect of piezoelectric secondary phase on mechanical properties	24
2.4.1	Influence on fracture toughness of the bioceramics	24
2.4.2	Effect of piezoelectric secondary phase on other mechanical properties of bioceramics	29
2.5	Effect of piezoelectric secondary phase on dielectric and electrical properties of bioceramics	31
2.6	Effect of piezoelectric secondary phase on antibacterial behavior of the bioceramics	34
2.7	Effect of piezoelectric secondary phase on	38

	cytocompatibility of the bioceramics	
2.8	Summary	42
Chapter 3	Experimental	62-80
3.1	Synthesis of Hydroxyapatite (HA)	62
3.2	Synthesis of Sodium Potassium Niobate (Na _{0.5} K _{0.5} NbO ₃ , NKN)	63
3.3	Synthesis of HA – NKN composites	64
3.4	Synthesis of 45S5 Bioglass (45S5 BG)	64
3.5	Synthesis of 45S5 BG- NKN composites	66
3.6	Synthesis of 1393 bioglass (1393 BG)	66
3.7	Synthesis of 1393 BG - NKN composites	68
3.8	Pelletization and sintering of composite samples	68
3.9	Density measurement	69
3.10	Phase evolution	70
3.10.1	X-Ray diffraction	70
3.10.2	FTIR spectroscopy	70
3.11	Scanning electron microscopy (SEM)	70
3.12	Mechanical characterization	71
3.12.1	Vicker's hardness measurement	71
3.12.2	Fracture toughness	72
3.12.3	Flexural strength	72
3.12.4	Compressive strength	73
3.13	Dielectric and electrical measurement	74
3.14	Polarization treatment	74
3.15	Polarization induced antibacterial behaviour	75
3.15.1	Quantitative analysis	75
3.15.2	Live / dead assay	76
3.15.3	Nitro blue tetrazolium (NBT) assay	76
3.16	Cell culture experiment	77
3.16.1	Electrical stimulation	78
3.16.2	Quantitative analyses (MTT assay)	78
3.16.3	Morphological analysis	78
3.17	Summary	79
Chapter 4	Synthesis, mechanical, electrical, polarization induced antibacterial and cellular response of HA - NKN composite	81-131
4.1	Particle size and density measurement	81
4.2	XRD analysis	82
4.3	Fourier transform infrared spectroscopic analysis	83

4.4	Scanning electron microscope	84
4.5	Mechanical behavior	85
4.5.1	Hardness and fracture toughness	85
4.5.2	Compressive and flexural strength	87
4.6	Dielectric measurement	88
4.7	AC conductivity behavior	96
4.8	Impedance analysis	99
4.9	Antibacterial response	103
4.9.1	MTT assay	103
4.9.2	Live / dead assay	105
4.9.3	Super oxide radical (SOD) assay	107
4.9.4	Catalase Assay	109
4.9.5	Lipid peroxidation (LPO) assay	111
4.9.6	Protein estimation assay	113
4.10	<i>In vitro</i> cytocompatibility	116
4.10.1	Cell viability	116
4.10.2	Morphological study	118
4.11	Closure	121
Chapter 5	Synthesis, mechanical, electrical, polarization induced antibacterial and cellular response of 45S5 BG - NKN composite	132-166
5.1	Phase evolution	132
5.2	Mechanical properties	134
5.2.1	Hardness and fracture toughness	134
5.2.2	Compressive and flexural strengths	136
5.3	Dielectric and electrical behavior	137
5.3.1	Dielectric measurement	137

5.3.2	AC conductivity measurement	142
5.3.3	Impedance Analyses	143
5.4	Antibacterial behavior	146
5.4.1	MTT assay	146
5.4.2	Kirby-Bauer test	148
5.4.3	Live / dead ratio	151
5.4.4	Nitro blue tetrazolium (NBT) assay	153
5.5	<i>In vitro</i> cytocompatibility	155
5.5.1	Cell viability	155
5.6	Closure	158
Chapter 6	Synthesis, mechanical, polarization induced antibacterial and cellular response of 1393 BG–NKN composite	167-1
6.1	Phase evolution	167
6.2	Mechanical properties	169
6.2.1	Hardness and fracture toughness	169
6.2.2	Compressive and flexural strength	171
6.3	Antibacterial behavior	172
6.3.1	MTT assay	172
6.3.2	NBT assay	174
6.3.3	Antibacterial ratio	175
6.4	<i>In vitro</i> cytocompatibility	180
6.4.1	Cell viability	180
6.4.2	Morphological analysis	181
6.5	Closure	185
Chapter 7	Conclusions sand Future Scope	190-1
7.1	Conclusions	190
7.2	Scope for the future work	194
