TABLE OF CONTENTS

S. No.	Content		Page No.
1	Chapter 1		1
1	Introduction		1
	1.1	Discrete range of cell Phone	1
	1.2	Health risk of electromagnetic radiation on Nervous System	3
	1.3	Electromagnetic radiation and hemodynamic activity	7
	1.4	Electromagnetic radiation and neurotrophic activity	8
	1.5	Electromagnetic Radiation and Neurotransmitters	8
	1.6	Electromagnetic radiation and Mitochondrial function	9
	1.7	Effect of electromagnetic radiation on biological system	9
	1.8	Electromagnetic radiation and liver	10
	1.9	Electromagnetic radiation and gastrointestinal tract	<u>11</u>
	1.10	Electromagnetic radiation and heart	11
	1.11	Lacunae in the existing literature, relevance of the study	12
	1.12	Hypothesis	12
	1.13	Objectives of thesis	14
2	Chapter 2		15
2.1.1	Introduction		15
2.1.2	Hypothesis		18
2.1.3	Materials and	Methods	19
	2.1.3.1	Animals	19
	2.1.3.2	Materials	19
	2.1.3.3	Electromagnetic Radiation Exposure System and Design	20
	2.1.3.4	Calculation of Power density and specific absorption rate of brain region	21
	2.1.3.5	Experimental design	22
2.1.4	Behavioral pa	rameter assessment	23
	2.1.4.1	Anxiety-like behavior in EPM test	23
	2.1.4.2	Open field test	23
	2.1.4.3	Hole board test	23
	2.1.4.4	Plasma corticosterone estimation	23
	2.1.4.5	Evaluation of mitochondrial membrane potential, complex activities and oxidative stress	24
	2146		24
	2.1.4.6	Mitochondria isolation	
	2.1.4.7	Evaluation of mitochondrial membrane potential (MMP	24
	2.1.4.8	Measurement of mitochondrial complex activity (I, II, IV and V)	25

2.1.4.9 Assay of catalase activity 26 2.1.4.10 SOD Activity 26 2.1.4.11 Western blot analysis 26 2.1.4.12 Histopathological studies 27 2.1.4.13 Flow cytometry analysis for measurement of pattern of cell apoptosis 27 2.1.4.14 Statistical analysis 28 2.1.4.14 Statistical analysis 28 2.1.5 Results 29 2.5.1.1 Repeated exposure of EMR changes arm entries in elevated plus maze paradigm 29 2.5.1.2 Long term exposure of EMR caused behavioral changes in Open Field Test (OFT) 31 2.5.1.3 Repeated exposure of EMR exhibited anxiety-like behavior in Hole Board Test (HBT) 36 2.5.1.4 EMR-2450 MHz increased plasma corticosterone levels in experimental animals 36 2.5.1.5 Correlation between plasma corticosterone and percentage arm entries in EMR subjected rats 37 2.5.1.6 EMR-2450 MHz decreased the atalase and superoxide 39 2.5.1.7 Effect of EMR-2450 MHz decreased the stalase and superoxide 39 2.5.1.9 Quantification of CRH-2 and GR receptors in amygdala				
2.1.4.10 SOD Activity 26 2.1.4.11 Western blot analysis 26 2.1.4.12 Histopathological studies 27 2.1.4.13 Flow cytometry analysis for measurement of pattern of cell apoptosis 27 2.1.4.14 Statistical analysis 28 2.1.5 Results 29 2.5.1.1 Repeated exposure of EMR changes arm entries in elevated plus maze paradigm 29 2.5.1.2 Long term exposure of EMR caused behavioral changes in Open Field Test (OFT) 31 2.5.1.3 Repeated exposure of EMR exhibited anxiety-like behavior in Hole Board Test (HBT) 33 2.5.1.4 EMR-2450 MHz increased plasma corticosterone levels in experimental animals 36 2.5.1.5 Correlation between plasma corticosterone and percentage arm entries in EMR subjected rats 37 2.5.1.6 EMR-2450 MHz decreased the mitochondrial membrane potential (MMP) in amygdalar region 37 2.5.1.7 Effect of EMR-2450 MHz decreased the catalase and superoxide 38 2.5.1.9 Quantification of CRH-2 and GR receptors in amygdala 40 2.5.1.9 Quantification in amygdalar tissue of brain 42		2.1.4.9	Assay of catalase activity	26
2.1.4.12 Histopathological studies 27 2.1.4.13 Flow cytometry analysis for measurement of pattern of cell apoptosis 27 2.1.4.14 Statistical analysis 28 2.1.5 Results 29 2.1.5 Results 29 2.5.1.1 Repeated exposure of EMR changes arm entries in elevated plus maze paradigm 29 2.5.1.2 Long term exposure of EMR caused behavioral changes in Open Field Test (OFT) 31 2.5.1.3 Repeated exposure of EMR exhibited anxiety-like behavior in Hole Board Test (HBT) 33 2.5.1.4 EMR-2450 MHz increased plasma corticosterone levels in experimental animals 36 2.5.1.5 Correlation between plasma corticosterone and percentage arm entries in EMR subjected rats 36 2.5.1.6 EMR-2450 MHz decreased the mitochondrial complex activities 38 2.5.1.7 Effect of EMR-2450 MHz on expression of cytoplasmic Bax, Bcl2 and their ratio in amygdalar tissue of brain 37 2.5.1.10 Effect of EMR (900 MHz, 1800 and 2450 MHz) on the pattern of amygdala 40 2.5.1.12 EMR-2450 MHz mangdalar tissue of brain 41 2.5.1.13 Histopathology 44		2.1.4.10		26

	2.2.3.6	Experimental design	60
	2.2.3.7	Evaluation of behavioral performance	61
	2.2.3.7.1	Forced swim test (FST)	61
	2.2.3.7.2	Tail Suspension Test (TST)	62
	2.2.3.7.3	Sucrose Preference Test (SPT)	62
	2.2.3.8	Measurement of cortical blood flow	62
	2.2.3.9	Estimation of VEGF level	63
	2.2.3.10	Assessment of monoamines and their metabolites in PFC	63
	2.2.3.11	Quantification of BDNF mRNA through reverse transcriptase- PCR (qRT-PCR)	63
	2.2.3.12	Flow cytometry analysis for measurement of apoptosis	64
	2.2.3.13	Statistical analysis	64
2.2.4	Results		65
	2.2.4.1	Effect of discrete range of EMR on immobility period during FST and TST	65
	2.2.4.2	Effect of repeated exposure of EMR (900, 1800 and 2450 MHz) on sucrose preference test	66
	2.2.4.3	Effect of long term exposure of EMR (900, 1800 and 2450 MHz) on mean blood flow in cortical region	67
	2.2.4.4	Effect of EMR (900, 1800 and 2450 MHz) on the level of VEGF in PFC	67
	2.2.4.5	Effect of EMR (900, 1800 and 2450 MHz) on serotonin, dopamine, norepinephrine level and their metabolites and its ratio in PFC	68
	2.2.4.6	Effect of EMR (900, 1800 and 2450 MHz) on BDNF mRNA expression in PFC	69
	2.2.4.7	Effect of EMR (900, 1800 and 2450 MHz) on the percentage of apoptotic Cells in PFC Error! Bookmark not defined.	70
2.2.5	Discussion		72
2.2.5.1	Summary		76
2.3.1	Introduction		78
	2.3.1.1	Hypothesis	80
2.3.2	Materials and	Methods	81
	2.3.2.1	Animals	81
	2.3.2.2	Materials	81
	2.3.2.3	Electromagnetic Radiation Exposure System and Design	81
	2.3.2.4	Calculation of Power density and specific absorption rate (SAR)	81
	2.3.2.5	Experimental design	82
	2.3.2.6	Behavioral parameter assessment	83
	2.3.2.6.1	Evaluation of spatial recognition memory in Y-maze test	83
2.3.2.7		mitochondrial function, integrity and oxidative stress	84

	2.3.2.7.7	Estimation of F1F0 ATP synthase (complex-V) activity	85
	2.3.2.7.6	Estimation of cytochrome c oxidase (complex-IV) activity	85
	2.3.2.7.8	Estimation of lipid peroxidation (LPO)	85
	2.3.2.7.9	Assessment of nitric oxide (NO) level	86
	2.3.2.7.10	Assay of superoxide dismutase (SOD	86
	2.3.2.7.11	Assay of Catalase activity	86
	2.3.2.7.12	Preparation of the samples and estimation of Acetylcholine using	86
		spectrofluorometer	
2.3.2.8	Western blot		86
2.3.2.9	Statistical Ar	nalysis	86
2.3.3	Results		87
2.3.3.1		ated the spatial recognition memory in Y- maze paradigm	87
2.3.3.2		ated the arm discrimination behavior in Y- maze paradigm	87
2.3.3.3		f Ach and AchE levels in EMR exposed rats	91
2.3.3.4		of expression of β - amyloid in hippocampus of EMR subjected rats	92
2.3.3.5		ted the mitochondrial integrity in hippocampus of animals	93
2.3.3.6		d the increase in expression of cytoplasmic cytochrome-C, Caspase- se-3 in hippocampus	94
2.3.3.7		f EMR exposed modulation in mitochondrial enzyme activities	95
2.3.3.8		of the mitochondrial oxidative and nitrosative stress markers in	96
	EMR-induce	d animals	
2.3.4	Discussion		97

3.2.6	3.2.3 3.2.4 3.2.5 Evaluation of 3.2.6.1	Measurement of Power density and specific absorption rate of abdomen and brain region Experimental design f behavioral performance Forced swimming test (FST)	106 108 108 108

	3.2.6.6	Estimation of level of AST and ALT in blood serum	109
	3.2.6.7	Pharmacokinetics Studies	109
	3.2.6.8	HPLC Analysis	109
	3.2.6.9	Statistical analysis	109
3.3	Results		110
	3.3.1	Fluoxetine (5, 10 and 20 mg/kg) decrease immobility period	110
		during FST and TST paradigm in EMR-2450 MHz exposed rats	
	3.3.2	Fluoxetine (5, 10 and 20mg/kg) increase sucrose consumption	112
	2.2.2	during sucrose preference test (SPT) in EMR exposed rats	110
	3.3.3	EMR-2450 MHz alters level of serotonin and dopamine of PFC in Eluoyoting (5, 10 and 20 mg/kg) treated rate	113
	3.3.4	in Fluoxetine (5, 10 and 20 mg/kg) treated rats	114
	5.5.4	Effect of EMR on CYP2D6 of liver and cortical region of brain in fluoxetine treated rats	114
	3.3.5	Effect of EMR on the pharmacokinetics of fluoxetine	115
	3.3.6	Effect of fluoxetine on ALT and AST in EMR exposed liver of	113
	5.5.0	experimental rats	110
3.4	Discussion		119
	3.4.1	Summary	123
4	Chapter 4		125
4.1	Introduction		125
4.1.1	Hypothesis		123
4.2	Materials and	methods	128
	4.2.1	Animals	129
	4.2.2	Drugs and chemicals	129
	4.2.3	Electromagnetic Radiation Exposure System and Design	129
	4.2.4	Calculation of Power density and specific absorption rate of	129
		gastric region	12/
	4.2.5	Experimental design	130
	4.2.6	Measurement of gastric blood flow	131
	4.2.7	Estimation of pH, gastric volume, free and total acidity	132
	4.2.8	Quantification of ulcer index	132
	4.2.9	Estimation of Mucus content	132
	4.2.10	Determination of H+K+-ATPase inhibitory activity	132
	4.2.11	Antioxidant and free radical determination	133
	4.2.12	Estimation of LPO, SOD, Catalase and Glutathione	133
	4.2.13	Measurement of VEGF levels in the gastric tissues	133
	4.2.14	Estimation of pro and anti-inflammatory markers in gastric	134
		tissues	
	4.2.15	Histopathological studies	134
	4.2.16	Statistical Analysis	134
4.3	Results		135
	4.3.1	Repeated exposure of EMR-2450 MHz decreased gastric blood	135
		flow in rats	
	4.3.2	EMR-2450 MHz causes gastric ulcerations in experimental rats	136

	4.3.3	Effect of EMR-2450 MHz on gastric ulcer in rats on D-28 and treated rats on D-42	139
	4.3.4	Repeated exposure to EMR-2450 MHz decreased Mucus content in rats	139
	4.3.5	Repeated exposure to EMR-2450 MHz increased	140
		H+/K+ ATPase activity in experimental rats	
	4.3.6	EMR-2450 MHz modulated stress markers in animals	141
	4.3.7	Repeated exposure to EMR-2450 MHz decreased VEGF level in animals	142
	4.3.8	Repeated exposure to EMR-2450 MHz modulated TNF- α , IL-6 and IL-10 in experimental rats	143
	4.3.9	Repeated exposure to EMR-2450 MHz changed histopathology in rats	145
4.4	Discussion		146
	4.4.1	Summary	150
5	Chapter 5		152
5.1	Introduction		152
	5.1.1	Hypothesis	153
5.2	Materials and 1	methods	154
	5.2.1	Animals	154
	5.2.2	EMR exposure apparatus and Design	154
	5.2.3	Measurement of Power density and specific absorption rate (SAR) on chest region of experimental rat	154
	5.2.4	Experimental design	155
	5.2.5	Evaluation of the preliminary activity of the heart	156
	5.2.5.1	Heart rate (HR) and Mean Arterial Pressure (MAP)	156
	5.2.5.2	Electrocardiogram estimation by using NIBP tail cup method	157
	5.2.6	Measurement of Cardiac Blood Flow	157
	5.2.7	Morphological study of Cardiac tissues by using a Scanning Electron Microscope	157
	5.2.8	Statistical Analysis	158
5.3	Results		158
	5.3.1	Effect of discrete range of EMR on Heart rate and Mean arterial pressure	158
	5.3.2	Effect of repeated exposure of EMR (900, 1800 and 2450 MHz) on Electrocardiography (ECG)	160
	5.3.3	Effect of long term exposure of EMR (900, 1800 and 2450 MHz) on mean blood flow in heart	161
	5.3.4	Effect of EMR (900, 1800 and 2450 MHz) on the morphological changes in cardiac tissues	162
5.4	Discussion.		163

	5.4.1 Summary	165
6	Conclusion	166
6.1	Conclusion are drawn from the present study	169
