

List of tables

<i>Table 2.1</i>	<i>: In vitro/ in vivo responses of electrically polarised HA.</i>	
<i>Table 3.1</i>	<i>: Strength of E-field, required for onset of electroporation for various pulse durations (cell size: 25 μm).</i>	<i>103</i>
<i>Table 3.2</i>	<i>: Summary of experimental (in vitro and in vivo) reports for the E-field parameters (field strength, pulse duration) utilised to electroporate various type of cells for number of applications.</i>	<i>106-108</i>
<i>Table 4.1</i>	<i>: Depolarization response of HA as a function of polarizing field and heating rate.</i>	<i>112</i>
<i>Table 4.2</i>	<i>: Binding energy values for the various elements, present in unpolarized and polarized HA along with their atomic percentage.</i>	<i>160</i>
<i>Table 4.3</i>	<i>: Depolarization response of HA-25 NKN composite as a function of heating rate.</i>	<i>168</i>
