

ACKNOWLEDGEMENTS

As this remarkable journey of five years nears an end, memories cast a glance and reminds of them, without whom, completion of this work would not have been possible. My hard work alone would not have sufficed for the materialization of this thesis, if not for the presence and support of some remarkable individuals, who have been my blessing in disguise. I begin my long list of acknowledgement with sincere gratitude to my supervisor **Prof. Ranjana Patnaik**, School of Biomedical Engineering, IIT (BHU), for her tremendous help and support. When I joined her lab with minimum experience in the field of neuroscience research, she supported me in every possible way. Her encouragement and motivation helped me traverse the difficulties and reach my goal. I am grateful to her for all the scientific inputs and research experiences she has shared with to improve the quality of this study. Her positive outlook towards life helped me to remain focused even during troubled times.

I am highly grateful to **Prof. Neeraj Sharma**, Coordinator, School of Biomedical Engineering, IIT (BHU), for his encouragement, support towards my research work and also for providing the research scholars an enhanced research environment in the department.

I take this opportunity to thank my Research Progress Evaluation Committee members, **Dr. Shiru Sharma**, Associate Professor, School of Biomedical Engineering and **Dr. Abha Mishra**, Associate Professor, School of Biochemical Engineering for their valuable comments and suggestions throughout my doctoral work, which helped me to become a better researcher.

I am also highly thankful to all the Professors of the School of Biomedical Engineering for their advices, suggestions and the selfless help regarding scientific work. I specially thank Dr. Marshal, for allowing me 24/7 access of his lab for research studies. I am also very thankful

to office staffs of School of Biomedical Engineering, for being supportive in every way. Especially, I would like to thank Mr. Ajay Kumar Yadav, Technical Superintendent, School of Biomedical Engineering, IIT(BHU), Varanasi, for his help regarding all the official paperworks. I express my honest gratitude to the Director, IIT (BHU), Deans and Registrars of institute for their direct and indirect support. I would also like to thank Ministry of Human Resources and Development, Government of India for the financial support. Also, I thank the anonymous reviewers for taking out time from their busy schedule to evaluate this work.

I am eternally thankful to Dr. Soma Adhikary, my sixth grade biology teacher, who instilled in me the love for biological sciences and helped me grasp the subject. I am highly grateful to Dr. Nirmalendu Das, ex-Emeritus scientist, Indian Institute of Chemical Biology, Kolkata, for providing me the first research environment during my Master's studies, thus helping me gain an insight of scientific research arena. The opportunity provided by him made me interested to pursue a career in scientific research. I am thankful to Dr. Nandan Kumar Jana, Heritage Institute of Technology, Kolkata and Dr. Piyali Basak, Jadavpur University, the mentors of my Master's thesis, for encouraging me to continue in the path of research.

Surviving five years away from home would have been a difficult task if not for the friends, who stood by me through the thick and thins. My warm thanks to Gaurav Sir, for helping me with the designing of the experiments, ideas regarding manuscript writing and advices regarding survival strategies. Thank you Sir, for all your support. I would like to use this chance to thank Romel, for his undaunting support throughout these years, Sagar, for his patience (which can be contagious and much needed during PhD work) and Taresh, for lightening all those serious situations that has crept me out in the last few years. Thank you guys, for being there in my highs and lows. I would also like to thank Uvanesh for his

wonderful advices, Munendra, for his witty solutions of problems, Tiwari, for his attempts to create a joyous environment in the lab, and Suruchi, Kiran and Juhi for all the help during the experiments. Devyani, thank you for all the time we had together and special mention to Neera and Deepshikha, for always being there. I am also thankful to my juniors Alok, Ajay, Bindu, Sumit and Kirti for the wonderful time we spent together.

No words or any amount of gratitude will suffice the love and support that I received from my family and which helped me reach my goal. Thank you *Baba*, for teaching me to be independent, self- sufficient and diligently dedicated and for letting me be myself. *Ma*, thank you for everything in life and just for being there, always. *Bhai*, thanks for your concerns and your love, which helped me overcome every tough situation. Without the support of you three, it would have been really tough to concentrate on my goal. Thank you for being the pillar of my strength.

Last, but not the least, I am highly grateful to the animals who sacrificed their lives for the success of the experimental studies. May your souls rest in peace.

“Part of the journey is the end” and finally, as the journey of last five years nears an end, I owe it to Varanasi, for presenting me with some of the most memorable moments of my life. Varanasi, you will be missed.

SUMEDHA MUKHERJEE
