Contents.....	viii-xii
List of Figures.....	xxiii-xxv
List of Tables.....	xxvi
Symbols and Abbreviations.....	xxvii-xxx
Preface.....	xxxii-xxxv
<b>Chapter 1 Introduction.....</b>	<b>1-4</b>
■ 1.1. Introduction.....	1
■ 1.2. Scope of present investigation.....	3
■ 1.3. Objectives of the present study.....	4
<b>Chapter 2 Literature Review.....</b>	<b>5-50</b>
■ 2.1. Development of Al-Si-alloy based material for engine applications.....	5
■ 2.2. Functionally Graded Materials (FGM).....	9
○ 2.2.1. Fabrication processes of bulk FGMs.....	10
■ 2.2.1.1. Powder metallurgy.....	11
■ 2.2.1.2. Liquid phase processes.....	14

a) Centrifugal casting.....	14
b) FGMs by application of magnetic and electromagnetic field.....	20
c) Infiltration processing.....	23
d) Directional solidification.....	24
■ 2.3. Al-Mg <sub>2</sub> Si in-situ metal matrix composite.....	25
○ 2.3.1. Morphology and growth mechanism of Mg <sub>2</sub> Si in Al; effect of solidification rate.....	26
○ 2.3.2. Effect of different processing routes and solidification parameters on the microstructure and properties.....	29
a) Effect of intensive melt shearing.....	29
b) Effect of melt superheating treatment.....	29
c) Semi-solid processing.....	30
○ 2.3.3. Effect of chemical modifications of Mg <sub>2</sub> Si particles.....	31
a) Effect of extra Silicon addition.....	31
b) Effect of extra Mg additions.....	33
c) Chemical modifications with different alloying elements and materials.....	35
■ 2.4. Functionally graded in-situ Al-Mg <sub>2</sub> Si composites.....	44
○ 2.4.1. Effect of solution treatment and ageing.....	48

## **Chapter 3 Experimental Procedure.....51-63**

■ 3.1. Introduction.....	51
■ 3.2. Procurement of materials.....	51

■ 3.3. Melting and casting.....	51
■ 3.4. Solution heat treatment and ageing (T6) of Al-Mg <sub>2</sub> Si in-situ FG-Composites.....	54
■ 3.5 Microstructural characterization.....	54
■ 3.6. Phase detection by X-Ray Diffraction( XRD) analysis.....	56
■ 3.7. Determination of secondary dendrite arm spacing (SDAS) and solidification time.....	57
■ 3.8. Determination of density and porosity% with increasing wt.% of Mg.	57
■ 3.9. Measurement of hardness.....	58
■ 3.10. Measurement of tensile properties.....	58
■ 3.11. Evaluation of tribological characteristics.....	60
○ 3.11.1. Dry sliding wear at room temperature.....	60
○ 3.11.2. Linear reciprocating wear at elevated temperature.....	61

## **Chapter 4 Synthesis and Microstructural Characterization of Al Mg<sub>2</sub>Si Functionally Graded Composites.....64-86**

■ 4.1.Introduction.....	64
■ 4.2. Analysis of chemical composition.....	64
■ 4.3. X-ray Diffraction (XRD) Analysis.....	64
■ 4.4. Microstructural features in as-cast conditions.....	66
■ 4.5. Elemental Analysis and size distribution of phases.....	75
■ 4.6. Determination of average %porosity.....	84
■ 4.7.Chapter summary.....	85

**Chapter 5 Mechanical Behavior of as-Cast Al-Mg<sub>2</sub>Si  
Functionally Graded Composites.....87-102**

- 5.1. Introduction.....87
- 5.2. Hardness profile across the cross-sections.....87
- 5.3. Effect of test temperatures on as-cast tensile properties.....89
- 5.4. Tensile fracture characteristics.....97
- 5.5. Chapter summary.....100

**Chapter 6 Effect of Solution Treatment and Ageing on Al-  
Mg<sub>2</sub>Si Functionally Graded Composites .....103-128**

- 6.1. Introduction.....103
- 6.2. Effect of solution treatment and ageing on microstructure.....103
- 6.3. Volume fraction and size distribution of primary Mg<sub>2</sub>Si particles.....113
- 6.4. Transmission Electron Microscopy on aged samples.....114
- 6.5. Effect on mechanical properties.....116
  - 6.5.1. Ageing effect on hardness.....116
  - 6.5.2. Ageing effect on tensile properties.....118
    - 6.5.2.1 Strengthening mechanisms.....123
  - 6.5.3. Characteristics of tensile fractures.....124
- 6.6. Chapter summary.....127

**Chapter 7 Tribological Characteristics of As-Cast and Aged  
Functionally Graded Composites.....129-158**

- 7.1. Introduction.....129
- 7.2. Dry Sliding Wear Behavior of As-Cast Al-Mg<sub>2</sub>Si FG-Composites ...129

- 7.2.1. Effect of sliding distance.....129
- 7.2.2. Effect of applied load.....134
- 7.2.3. Effect of volume% Mg<sub>2</sub>Si on dry sliding wear behavior.....141
- 7.3. High temperature wear behavior of Al-Mg<sub>2</sub>Si in-situ functionally graded Composites.....143
  - 7.3.1. Effect of Mg contents on wear mass loss.....143
  - 7.3.2. Evaluation of co-efficient of friction.....144
  - 7.3.3.Characterization of worn surfaces.....148
- 7.4. Chapter Summary.....157

**Chapter 8 Summary and Suggestions for Future Works 159-163**

- 8.1. Introduction.....159
- 8.2. Summary.....159
  - 8.2.1. Effect of Mg-content on A356-Mg<sub>2</sub>Si FG composite.....159
  - 8.2.2. Mechanical behavior in as-cast condition.....160
  - 8.2.3. Effect of solution treatment and ageing.....161
  - 8.2.4. Tribological Characteristics.....162
- 8.3. Suggestions for future work.....163
