

List of figures	(i-vii)
Abbreviations	(viii-ix)
Preface	(x-xii)
Chapter 1: Introduction and literatures review	(1-33)
1.1 A brief historical background on nanoscience and introduction to noble metallic nanomaterials	
1.2 Quantum confinement, size factor and origin of intense color of noble metallic nanomaterials	
1.3 Synthetic methodology for nanostructure generation	
1.4 Glimpse over the vital synthesis on gold and silver nanomaterials (Important literatures review)	
1.4.1 Faraday methods	
1.4.2 Turkevich method	
1.4.3 Brust-Schiffrin method	
1.4.4 CTAB and ascorbic method	
1.4.5 Polyol method of noble metallic nanomaterials	
1.4.6 Luminol catalyzed reduction method	
1.4.7 Tetrathiafulvalene catalyzed reduction	
1.4.8 Chitosan reduction method	
1.5 Photochemical mediated synthesis of metallic nanomaterials	
1.5.1 Photochemical synthesis of silver nanoparticles using enzyme cofactor reduced nicotinamide adenine dinucleotide (NADH)	
1.5.2 Photochemical synthesis of gold nanoparticles by Irgacure-2959	
1.6 Diversified applications of noble metallic nanomaterials	

1.7 Room for the research in area of photochemical synthesis of nanomaterials and its practical applications

1.7.1 Generalized overview of photochemical mediated synthesis of metallic nanomaterials

1.7.2 Stepwise formation of metallic nanomaterials, generalized mechanism and role of capping agent

1.8 Chemically modified electrode for electroensing

1.8.1 Convenient methods for the chemical modification of electrode and its surface investigation at a glance

1.8.2 Need of chemical modification of electrode

1.8.3 Mechanism of electrocatalysis on chemically modified of electrode

1.8.4 Benefits of utilizing the nanomaterials modified electrode in electroensing

1.9 Motivation & objective of the present thesis

1.10 Benefits of the proposed scheme in perspective of synthetic procedure and practical applications

Chapter 2: Characterization Techniques: from working principle to instrumentation (35-49)

2.1 Characterization Techniques

2.1.1 UV Visible spectroscopy

2.1.2 Fourier Transform Infrared Spectroscopy (FT-IR)

2.1.3 X-ray Photoelectron Spectroscopy (XPS)

2.1.4 Scanning Electron Microscope (SEM)

2.1.5 Transmission Electron Microscopy (TEM)

2.1.5.1 Bright Field (BF) and Dark Field (DF) imaging

2.1.5.2 Basic features of electron diffraction

2.1.5.3 Phase Contrast/ Lattice Imaging/ High Resolution Transmission Electron Microscopy (HRTEM)

2.1.6 Electrochemical voltammetric techniques, associated terminology and its working principle

2.1.6.1 Cyclic voltammetry and amperometric technique

2.1.6.2 Faradaic & nonfaradaic current and its consequences

Chapter 3: Photochemical mediated synthesis of gold nanoparticles by dithizone and its application in amperometric sensing of thiocyanate **(51-69)**

3.1 Introduction

3.2 Experimental Section

3.2.1. Materials

3.2.2. Photochemical Synthesis protocol of gold nanoparticles:

3.2.3. Fabrication of gold nanomaterials modified electrode for amperometric sensing of thiocyanate

3.2.4 Instrumentation

3.3 Results and Discussion

3.3.1 Characterization of photochemically synthesized gold nanoparticles by dithizone

3.3.2 Amperometric sensing of thiocyanate by gold nanoparticles modified electrode

3.4 Concluding remarks of the chapter

Chapter 4: Photochemical assisted formation of silver nanoparticles by dithizone and its application in amperometric sensing of cefotaxime (71-88)

4.1 Introduction:

4.2. Experimental Section

4.2.1. Materials

4.2.2. Photochemical Synthesis of silver nanoparticles

4.2.3. Preparation of electrode modified with silver nanoparticles for electro-sensing of cefotaxime

4.2.4. Instrumentation

4.3 Results and Discussion

4.3.1 Characterizations of the photochemical assisted synthesis of silver nanoparticles by dithizone

4.3.2 Application of the silver nanoparticles in Amperometric sensing of cefotaxime

4.4. Concluding Remarks of the chapter

Chapter 5: Photochemical assisted synthesis of gold nanoparticles by phenothiazine and its application in amperometric sensing of phosphate (90-110)

5.1. Introduction

5.2. Experimental Section

5.2.1 Materials

5.2.2 Photochemical synthesis of gold nanoparticles by phenothiazine

5.2.3 Preparation of Au-PTZH modified electrode for amperometric sensing of phosphate

5.2.4 Instrumentation:

5.3 Results and Discussion

5.3.1 Characterization of the photochemical mediated synthesis of gold nanoparticles by phenothiazine

5.3.2 Application of the gold nanoparticles in Amperometric sensing of phosphate

5.4 Concluding Remarks of the chapter

Chapter 6: Photochemical assisted formation of silver nano dendrites by phenothiazine and its application in amperometric sensing of nitrite

(112-130)

6.1. Introduction

6.2. Experimental Section

6.2.1. Materials

6.2.2. Photochemical Synthesis of gold nanoparticles by phenothiazine

6.2.3. Application of silver nanostructures in amperometric sensing of nitrite

6.2.4. Instrumentation

6.3. Results and Discussion

6.3.1. Characterizations of photochemically synthesized silver dendritic nanostructure

6.3.2. Application of the silver dendritic nanostructures in amperometric sensing of nitrite

6.4. Concluding remarks of the chapter

Contents

Chapter 7: Conclusions	(131-133)
7.1 Concluding remarks	
7.2 Implication for future work
