

## LIST OF TABLES

---

---

<b>Table No.</b>	<b>Table Caption</b>	<b>Page No.</b>
<b>Table 1.1</b>	Estimate of global fresh-water distribution	<b>6</b>
<b>Table 1.2</b>	Occurrence of metals in industrial effluents of various industries	<b>13</b>
<b>Table 1.3</b>	Metals with their toxicities and MCL standards	<b>14</b>
<b>Table 1.4</b>	Limitations of various physico-chemical methods used for treatment of metal rich effluents	<b>15</b>
<b>Table 1.5</b>	Different methods of fabrication of nanoparticles used as an adsorbent for water treatment	<b>33</b>
<b>Table 1.6</b>	Characterization techniques of nano-particles synthesized as an adsorbent for water treatment	<b>36</b>
<b>Table 2.1</b>	Application of nanoparticles as adsorbent for the removal of metallic pollutants from water and wastewater by adsorption	<b>47</b>
<b>Table 3.1</b>	Experimental ranges and levels of independent factors	<b>63</b>
<b>Table 5.1</b>	Box-Behnken designed experimental runs for removal of chromium on nano-alumina	<b>96</b>
<b>Table 5.2</b>	Estimated regression coefficients for removal of chromium on nano-alumina	<b>98</b>
<b>Table 5.3</b>	Analysis of variance for removal of chromium on nano-alumina	<b>99</b>
<b>Table 5.4</b>	Confirmation experiments for removal of chromium on nano-alumina	<b>105</b>
<b>Table 5.5</b>	Langmuir and Freundlich isotherm parameters for linear analysis for adsorption of chromium from aqueous solution on nano-alumina	<b>108</b>
<b>Table 5.6</b>	Langmuir and Freundlich isotherm parameters for non-linear analysis obtained by in-built Microcal origin functions for adsorption of chromium from aqueous solution on nano-alumina	<b>111</b>

<b>Table 5.7</b>	Langmuir and Freundlich isotherm parameters for non-linear analysis obtained by customized Microcal origin functions for adsorption of chromium from aqueous solution on nano-alumina	<b>112</b>
<b>Table 5.8</b>	Pseudo-first order and pseudo-second order kinetic parameters for linear analysis and non-linear analysis by Microcal origin for adsorption of chromium from aqueous solution on nano-alumina	<b>116</b>
<b>Table 5.9</b>	Pseudo-first order and pseudo-second order kinetic parameters for linear analysis and non-linear analysis by customized Microcal origin for adsorption of chromium from aqueous solution on nano-alumina	<b>120</b>
<b>Table 5.10</b>	Intra-particle diffusion constant values for removal of chromium from aqueous solution on nano-alumina	<b>121</b>
<b>Table 5.11</b>	Thermodynamic parameters for adsorption of chromium from aqueous solution on nano-alumina	<b>125</b>
<b>Table 5.12</b>	Chromium removal after subsequent regeneration cycle (Initial conc.=5 mg/L, pH = 2.0, Dose = 10 g/L, Temperature =303 K)	<b>128</b>
<b>Table 6.1</b>	Box-Behnken designed experimental runs for removal of nickel on nano-alumina	<b>137</b>
<b>Table 6.2</b>	Estimated regression coefficients for removal of nickel on nano-alumina	<b>139</b>
<b>Table 6.3</b>	Analysis of variance for removal of nickel on nano-alumina	<b>141</b>
<b>Table 6.4</b>	Confirmation experiments for removal of nickel on nano-alumina	<b>147</b>
<b>Table 6.5</b>	Langmuir and Freundlich isotherm parameters for linear analysis for adsorption of nickel from aqueous solution on nano-alumina	<b>150</b>
<b>Table 6.6</b>	Langmuir and Freundlich isotherm parameters for non-linear analysis obtained by in-built Microcal origin functions for adsorption of chromium from aqueous solution on nano-alumina	<b>153</b>
<b>Table 6.7</b>	Langmuir and Freundlich isotherm parameters for non-linear analysis obtained by customized Microcal origin	<b>154</b>

functions for adsorption of chromium from aqueous solution on nano-alumina

<b>Table 6.8</b>	Pseudo-first order and pseudo-second order kinetic parameters for linear analysis and non-linear analysis by Microcal origin for adsorption of chromium from aqueous solution on nano-alumina	<b>158</b>
<b>Table 6.9</b>	Pseudo-first order and pseudo-second order kinetic parameters for linear analysis and non-linear analysis by customized Microcal origin for adsorption of chromium from aqueous solution on nano-alumina	<b>161</b>
<b>Table 6.10</b>	Intra-particle diffusion constant values for removal of chromium from aqueous solution on nano-alumina	<b>163</b>
<b>Table 6.11</b>	Thermodynamic parameters for adsorption of chromium from aqueous solution on nano-alumina	<b>166</b>
<b>Table 6.12</b>	Nickel removal after subsequent regeneration cycle (Initial conc.=20 mg/L, pH = 7.0, Dose = 10 g/L, Temperature =303 K)	<b>169</b>
<b>Table 7.1</b>	Box-Behnken designed experimental runs for removal of chromium on nano-cupric oxide the data estimated by the model)	<b>178</b>
<b>Table 7.2</b>	Estimated regression coefficients for removal of chromium on nano-cupric oxide	<b>180</b>
<b>Table 7.3</b>	Analysis of variance for removal of chromium on nano-cupric oxide	<b>181</b>
<b>Table 7.4</b>	Confirmation experiments for removal of chromium on nano-cupric oxide	<b>187</b>
<b>Table 7.5</b>	Langmuir and Freundlich isotherm parameters for linear analysis for adsorption of chromium from aqueous solution on nano-cupric oxide	<b>191</b>
<b>Table 7.6</b>	Langmuir and Freundlich isotherm parameters for non-linear analysis obtained by in-built Microcal origin functions for adsorption of chromium from aqueous solution on nano-cupric oxide	<b>194</b>
<b>Table 7.7</b>	Langmuir and Freundlich isotherm parameters for non-linear analysis obtained by customized Microcal origin functions for adsorption of chromium from aqueous solution on nano-cupric oxide	<b>195</b>

<b>Table 7.8</b>	Pseudo-first order and pseudo-second order kinetic parameters for linear analysis and non-linear analysis by Microcal origin for adsorption of chromium from aqueous solution on nano-cupric oxide	<b>199</b>
<b>Table 7.9</b>	Pseudo-first order and pseudo-second order kinetic parameters for linear analysis and non-linear analysis by customized Microcal origin for adsorption of chromium from aqueous solution on nano-cupric oxide	<b>202</b>
<b>Table 7.10</b>	Intra-particle diffusion constant values for removal of chromium from aqueous solution on nano-cupric oxide	<b>204</b>
<b>Table 7.11</b>	Thermodynamic parameters for adsorption of chromium from aqueous solution on nano-cupric oxide	<b>208</b>
<b>Table 7.12</b>	Chromium removal after subsequent regeneration cycle (Initial conc.=10 mg/L, pH = 2.0, Dose = 8 g/L, Temperature =303 K)	<b>210</b>
<b>Table 8.1</b>	Box-Behnken designed experimental runs for removal of nickel on nano-cupric oxide	<b>220</b>
<b>Table 8.2</b>	Estimated regression coefficients for removal of nickel on nano-cupric oxide	<b>222</b>
<b>Table 8.3</b>	Analysis of variance for removal of nickel on nano-cupric oxide	<b>223</b>
<b>Table 8.4</b>	Confirmation experiments for removal of nickel on nano-cupric oxide	<b>229</b>
<b>Table 8.5</b>	Langmuir and Freundlich isotherm parameters for linear analysis for adsorption of nickel from aqueous solution on nano-cupric oxide	<b>232</b>
<b>Table 8.6</b>	Langmuir and Freundlich isotherm parameters for non-linear analysis obtained by in-built Microcal origin functions for adsorption of nickel from aqueous solution on nano-cupric oxide	<b>236</b>
<b>Table 8.7</b>	Langmuir and Freundlich isotherm parameters for non-linear analysis obtained by customized Microcal origin functions for adsorption of nickel from aqueous solution on nano-cupric oxide	<b>236</b>
<b>Table 8.8</b>	Pseudo-first order and pseudo-second order kinetic parameters for linear analysis and non-linear analysis by	<b>240</b>

	Microcal origin for adsorption of nickel from aqueous solution on nano-cupric oxide	
<b>Table 8.9</b>	Pseudo-first order and pseudo-second order kinetic parameters for linear analysis and non-linear analysis by customized Microcal origin for adsorption of nickel from aqueous solution on nano-cupric oxide	<b>244</b>
<b>Table 8.10</b>	Intra-particle diffusion constant values for removal of nickel from aqueous solution on nano-cupric oxide	<b>246</b>
<b>Table 8.11</b>	Thermodynamic parameters for adsorption of nickel from aqueous solution on nano-cupric oxide	<b>249</b>
<b>Table 8.12</b>	Nickel removal after subsequent regeneration cycle (Initial conc.=20 mg/L, pH = 7.0, Dose = 6 g/L, Temperature =303 K)	<b>252</b>
