

## List of Tables

		Page no.
Table 1.1	List of countries with chromium contamination	3
Table 1.2	Chromium standards for drinking water	6
Table 1.3	List of countries with cadmium contamination	7
Table 1.4	Cadmium standards for drinking water	10
Table 3.1	Quantity of iron precursor for synthesis of nano crystalline iron oxide/ hydroxide	23
Table 3.2	Initial molar concentrations of precursor with different calcinations temperatures for synthesis of nano crystalline zirconia	24
Table 3.3	Equilibrium time of chromium and cadmium by nano crystalline iron oxide/ hydroxide	25
Table 3.4	Level of variables chosen for CCD in adsorptive removal of chromium utilizing nano crystalline zirconia	27
Table 3.5	Level of variables chosen for RSM design in adsorptive removal of chromium utilizing nano iron oxide/ hydroxide	28
Table 3.6	Level of variables chosen for BBD in adsorptive removal of cadmium utilizing nano crystalline zirconia	28
Table 3.7	Level of variables chosen for BBD in adsorptive removal of cadmium utilizing nano iron oxide/ hydroxide	29
Table 4.1	Crystallite size of synthesized nanocrystalline zirconia samples	38
Table 4.2	Size variations of different samples based on TEM analysis	40
Table 4.3	XRD peaks and crystallite size of synthesized iron oxide/hydroxide	49
Table 4.4	Observed Raman wavenumbers ( $\text{cm}^{-1}$ ) of the synthesized iron oxide/hydroxide sample	52
Table 5.1	Experimental runs for removal of chromium utilizing nano crystalline zirconia	57
Table 5.2	Estimated regression coefficients for removal (%) of chromium using nano crystalline zirconia	58
Table 5.3	Analysis of variance for removal (%) of chromium using nano crystalline zirconia	59
Table 5.4	Experiments at variable pH with optimum initial concentration and adsorbent dose	64

Table 5.5	Langmuir and Freundlich isotherm parameters for linear analysis and nonlinear analysis by Microcal origin for adsorption of chromium from aqueous solution on nano crystalline zirconia	66
Table 5.6	Langmuir and Freundlich isotherm parameters by error analysis method for adsorption of chromium from aqueous solution on nano crystalline zirconia	68
Table 5.7	Pseudo-first order and pseudo-second order kinetic parameters for linear analysis and nonlinear analysis by Microcal origin for adsorption of chromium from aqueous solution on nano crystalline zirconia	71
Table 5.8	Pseudo-first order and pseudo-second order model constants by error analysis method for adsorption of chromium from aqueous solution on nano crystalline zirconia	74
Table 5.9	Intraparticle diffusion parameters for adsorption of chromium from aqueous solution on nano crystalline zirconia	75
Table 5.10	Thermodynamic parameters estimated by Langmuir constant method for adsorption of chromium by nano crystalline zirconia	78
Table 5.11	Thermodynamic parameters calculated by partition method for adsorption of chromium by nano crystalline zirconia	79
Table 5.12	Desorption efficiency of 0.1N NaOH, 0.1N KOH, 0.1N NH <sub>4</sub> OH for chromium loaded nano crystalline zirconia	80
Table 5.13	Chromium removal (%) after subsequent regeneration cycle (Initial concentration = 20 mg L <sup>-1</sup> , pH = 2, Adsorbent dose = 4 g L <sup>-1</sup> , Temperature = 303 K)	81
Table 6.1	Experimental runs for removal of chromium utilizing nano crystalline iron oxide/hydroxide	84
Table 6.2	Estimated regression coefficients for removal of chromium by nano crystalline iron oxide/hydroxide	85
Table 6.3	Analysis of Variance for removal of chromium utilizing nano crystalline iron oxide/hydroxide	86
Table 6.4	Confirmation experiments for removal of chromium using nano crystalline iron oxide/hydroxide	92
Table 6.5	Optimization of removal of chromium using nano iron oxide/hydroxide	93
Table 6.6	Langmuir and Freundlich isotherm parameters along with coefficient of determination by linear analysis for adsorption of chromium from aqueous solution on nano crystalline iron oxide/hydroxide	94

Table 6.7	Langmuir and Freundlich isotherm parameters along with coefficient of determination by error analysis method for adsorption of chromium from aqueous solution on nano crystalline iron oxide/hydroxide	96
Table 6.8	Langmuir and Freundlich isotherm parameters along with coefficient of determination by Microcal origin for adsorption of chromium from aqueous solution on nano crystalline iron oxide/hydroxide	98
Table 6.9	Pseudo-first order and pseudo-second order kinetic parameters by linear analysis for adsorption of chromium from aqueous solution on nano crystalline iron oxide/hydroxide	99
Table 6.10	Pseudo-first order and pseudo-second order model constants by error analysis method for adsorption of chromium from aqueous solution on nano iron oxide/hydroxide	101
Table 6.11	Pseudo-first order and pseudo-second order kinetic parameters for linear analysis and nonlinear analysis by Microcal origin for adsorption of chromium from aqueous solution on nano crystalline iron oxide/hydroxide	102
Table 6.12	Intra particle diffusion model parameters for removal of chromium using nano crystalline iron oxide/hydroxide	103
Table 6.13	Thermodynamic parameters estimated by Langmuir constant method for adsorption of chromium by nano crystalline iron oxide/hydroxide (b value by Microcal origin is outrageously high hence the values are not included)	105
Table 6.14	Thermodynamic parameters calculated by partitioned method for adsorption of chromium by nano crystalline iron oxide/hydroxide	107
Table 6.15	Desorption efficiency of 0.1N NaOH, 0.1N KOH, 0.1N NH <sub>4</sub> OH for chromium loaded nano crystalline iron oxide/hydroxide	108
Table 6.16	Chromium removal after subsequent regeneration cycle (Initial concentration = 50 mg L <sup>-1</sup> , pH = 2, Adsorbent dose = 4 g L <sup>-1</sup> , Temperature =303 K)	109
Table 7.1	Box-Behnken designed experimental runs for removal of cadmium utilizing nano crystalline zirconia	113
Table 7.2	Estimated Regression Coefficients for removal of cadmium using nano crystalline zirconia	114
Table 7.3	Analysis of Variance for removal of cadmium utilizing nano crystalline zirconia	114
Table 7.4	Confirmation experiments for removal of cadmium using	120

	nano crystalline zirconia	
Table 7.5	Optimization of removal of cadmium using nano crystalline zirconia	120
Table 7.6	Langmuir and Freundlich isotherm parameters along with coefficient of determination for linear analysis and nonlinear analysis by Microcal origin for adsorption of cadmium from aqueous solution on nano crystalline zirconia	122
Table 7.7	Langmuir and Freundlich isotherm parameters along with coefficient of determination by error analysis method for adsorption of cadmium from aqueous solution on nano crystalline zirconia	124
Table 7.8	Pseudo-first order and pseudo-second order kinetic parameters for linear analysis and nonlinear analysis by Microcal origin for adsorption of cadmium from aqueous solution on nano crystalline zirconia	127
Table 7.9	Pseudo-first order and pseudo-second order model constants by error analysis method for adsorption of cadmium from aqueous solution on nano zirconia	129
Table 7.10	Intra particle diffusion model parameters for removal of cadmium using nano crystalline zirconia	132
Table 7.11	Thermodynamic parameters estimated by Langmuir constant method for adsorption of cadmium by nano crystalline zirconia	133
Table 7.12	Thermodynamic parameters calculated by partitioned method for adsorption of cadmium by nano crystalline zirconia	135
Table 7.13	Cadmium removal after subsequent regeneration cycles (Initial concentration = 5 mg L <sup>-1</sup> , pH = 7, Adsorbent dose = 4 g L <sup>-1</sup> , Temperature =303 K)	136
Table 8.1	Box-Behnken designed experimental runs for removal of cadmium utilizing nano crystalline iron oxide/hydroxide	140
Table 8.2	Estimated Regression Coefficients for removal of cadmium using iron oxide/ hydroxide	141
Table 8.3	Analysis of Variance for removal of cadmium using iron oxide/hydroxide	142
Table 8.4	Confirmation experiments for removal of cadmium using nano crystalline iron oxide/hydroxide	147
Table 8.5	Optimization experiments for removal of cadmium using nano crystalline iron oxide/hydroxide	147
Table 8.6	Langmuir and Freundlich isotherm parameters along with coefficient of determination for linear analysis and nonlinear	149

analysis by Microcal origin for adsorption of cadmium from aqueous solution on nano crystalline iron oxide/hydroxide

Table 8.7	Langmuir, Freundlich isotherm parameters along with coefficient of determination by error analysis method for adsorption of cadmium from aqueous solution on nano crystalline iron oxide/hydroxide	151
Table 8.8	Pseudo-first order and pseudo-second order kinetic parameters for linear analysis for adsorption of cadmium from aqueous solution on nano crystalline iron oxide/hydroxide	154
Table 8.9	Pseudo-first order and pseudo-second order model constants by error analysis method for adsorption of cadmium from aqueous solution on nano iron oxide/hydroxide	156
Table 8.10	Pseudo-first order and pseudo-second order kinetic parameters for nonlinear analysis by Microcal origin for adsorption of cadmium from aqueous solution on nano crystalline iron oxide/hydroxide	156
Table 8.11	Intra particle diffusion model parameters for removal of cadmium using nano crystalline iron oxide/hydroxide	158
Table 8.12	Thermodynamic parameters estimated by Langmuir constant method for adsorption of cadmium by nano crystalline iron oxide/hydroxide	160
Table 8.13	Thermodynamic parameters calculated by partitioned method for adsorption of cadmium by nano crystalline iron oxide/hydroxide	162
Table 8.14	Cadmium removal after subsequent regeneration cycle (Initial concentration =50 mg L <sup>-1</sup> , pH = 7, Adsorbent dose = 4 g L <sup>-1</sup> , Temperature =303 K)	163
