LIST OF FIGURES

Figure 1.1:	General block diagram of image reconstruction	4
Figure 1.2:	Block diagram of noisy measured data	5
Figure 2.1:	A classification of different medical imaging modalities with respect	11
	to the type of energy source used for imaging	
Figure 2.2:	General Block diagram of a typical modern electronic medical imag-	13
	ing system	
Figure 2.3:	The coincidence data detected in each LOR estimate the activity den-	16
	sity in the image.	
Figure 2.4:	Classifications of Tomographic Image Reconstruction Techniques	18
Figure 2.5:	The 1D projection at angle θ , is an integral of the object distribution	19
	f(x, y) along the s direction.	
Figure 2.6:	The Fourier slice theorem.	20
Figure 2.7:	(a) Original Shepp-Logan head Phantom, 256 × 256. (b) Sinogram	24
	over 1000 projections, (c) Reconstruction obtained without filter, (d)-	
	(h) Reconstructed image over 180 degrees: (d) 50, (e) 100, (f) 300,	
	(g) 500, and (h) 1000 projections by FBP	
Figure 2.8:	Reconstruction process in algebraic method.	25
Figure 2.9:	The phantoms used in the simulation study, (a) Modified Shepp-	57
	Logan phantom (128×128 pixels), (b) PET Test phantom (128×128	
	pixels), (c) SPECT Test phantom (128×128 pixels), (d) Medical	
	thorax image (128×128 pixels).	
Figure 2.10:	Modified Shepp-Logan phantom	57
Figure 2.11:	PET Test phantom	58
Figure 2.12:	SPECT Test phantom	58
Figure 2.13:	Medical thorax image	59
Figure 3.1:	The proposed Hybrid Model (MLEM+AD)	71
Figure 3.2:	Modified Sheep-Logan mathematical phantom (64x64pixels) &	73
	Standard thorax medical image (128x128 pixels)	
Figure 3.3:	The PET test Phantom with different reconstruction methods. Projec-	74
	tion including 10% uniform Poisson distributed background events.	
Figure 3.4:	The Plots of SNR, RMSE, CP, and MSSIM along with Iterations for	74

Test case 1.

Figure 3.5:	Line Plot of simulated PET test Phantom and standard Thorax phan-	
	tom images using proposed MLEM+AD method	
Figure 3.6:	The SPECT elliptical Test Phantom with different reconstruction	75
	methods. Projection including 10% uniform Poisson distributed	
	background events.	
Figure 3.7:	The Plots of SNR, RMSE, CP, and MSSIM along with Iterations for	75
	Test case 2.	
Figure 3.8:	Modified Sheep-Logan mathematical phantom (64x64pixels) &	85
	Standard thorax medical image (128x128 pixels)	
Figure 3.9:	The modified Shepp-Logan phantom image reconstructed by differ-	86
	ent algorithms: (a) SART, (b) MLEM, (c) MRP, (d) MLEM+AD	
Figure 3.10:	The Plots of SNR, PSNR, CP, and MSSIM along with No. of Itera-	87
	tions for different reconstruction algorithms.	
Figure 3.11:	Line Plots of reconstructed Modified Shepp-Logan Phantom image	87
E	using proposed (MLEM+AD) and other methods	00
Figure 3.12 :	The real thorax phantom image reconstructed by different algorithms:	88
E	(a) SAR1, (b) MLEM, (c) MRP, (d) MLEM+AD	00
Figure 3.13:	(MLEM+AD) and other methods	88
Figure 4.1:	Generalized Hybrid-Cascaded Framework for PET/SPECT Image	91
	Reconstruction	
Figure 4.2:	Proposed MLEM based hybrid-cascaded framework (Model-1)	100
Figure 4.3:	The phantoms used in the simulation study, (a) Modified Shepp-	108
	Logan phantom (128×128 pixels), (b) PET Test phantom (128×128 pix-	
	els), (c) SPECT Test phantom (128×128 pixels), (d) Medical thorax	
	image $(_{128\times128} pixels)$	
Figure 4.4:	The Modified Shepp-Logan phantom with different reconstruction	109
	methods. Projection including 15% uniform Poisson distributed	
	background events.	
Figure 4.5:	The Plots of SNR, RMSE, CP and MSSIM along with No. of Itera-	110
	tions for different reconstruction algorithms for Test case 1.	
Figure 4.6:	Line Plot of Shepp-Logan Phantom	110
Figure 4.7:	The PET test phantom with different reconstruction methods includ-	111

ing 15% uniform Poisson noise.

Figure 4.8:	Line Plots of reconstructed PET Test Phantom using proposed (SART+MLEM+mAD) and other methods	111
Figure 4.9:	The SPECT test phantom with different reconstruction methods in-	112
	cluding 15% uniform Poisson noise.	
Figure 4.10:	Line Plots of reconstructed Elliptical Test Phantom using proposed (SART+MLEM+MedAD) and other methods	112
Figure 4.11:	The Real thorax phantom with different reconstruction methods in-	113
	cluding 15% uniform Poisson noise.	
Figure 4.12:	Line Plots of reconstructed Standard Thorax medical Test image us- ing proposed (SART+MLEM+MedAD) and other methods	113
Figure 4.13:	Proposed MRP based hybrid-cascaded framework (Model-2)	118
Figure 4.14:	The phantoms used in the simulation study, (a) Modified Shepp Lo-	121
	gan phantom, (b) Medical thorax image	
Figure 4.15:	The Modified Shepp-Logan phantom with different reconstruction	121
	methods.	
Figure 4.16:	The standard thorax medical image with different reconstruction	121
	methods.	
Figure 4.17:	The Plots of SNR, RMSE, CP and MSSIM along with No. Iterations	122
Figure 4.18:	Line Plot of Shepp-Logan phantom and standard thorax medical im-	122
	age using Proposed method (SART+MRP+AD) with other methods	
Figure 4.19:	Proposed OSEM based hybrid-cascaded framework (Model-3)	128
Figure 4.20:	The phantoms used in the simulation study, (a) Modified Shepp-	133
	Logan phantom (64 x 64 pixels), (b) PET Test phantom (64 x 64 pix-	
	els), (c) SPECT Test phantom (64 x 64 pixels), (d) Medical thorax	
	image (128x128 pixels)	
Figure 4.21:	The Modified Shepp-Logan phantom with different reconstruction	134
	methods including 15% uniform Poisson noise.	
Figure 4.22:	The Plots of SNR, RMSE, PSNR, CP, and MSSIM along with No. of	135
	Iterations.	
Figure 4.23:	Line Plot of Shepp-Logan phantom using Proposed method	136
	(SART+OSEM+AD) with other methods	
Figure 4.24:	The PET test phantom with different reconstruction methods includ-	136
-	ing 15% uniform Poisson noise	
Figure 4.25:	Line Plot of PET Test phantom using Proposed method	137

(SART+OSEM+AD) with other methods

- Figure 4.26: The SPECT elliptical Test Phantom with different reconstruction 137 methods including 15% uniform Poisson noise.
- Figure 4.27: Line Plot of Elliptical Test phantom using Proposed method 138 (SART+OSEM+AD) with other methods
- Figure 4.28: The standard thorax medical image with different reconstruction 138 methods including 15% uniform Poisson noise.
- Figure 4.29: Line Plot of Standard Thorax Test phantom image using Proposed 139 method (SART+OSEM+AD) with other methods
