## LIST OF TABLES

---

<b>Table 2.1:</b> Summary of various human activity methods .....	26
<b>Table 3.1:</b> Summary of various moving object segmentation methods.....	42
<b>Table 3.2:</b> Comparison of methods in terms of Relative foreground area measure.....	75
<b>Table 3.3:</b> Comparison of methods in terms of Misclassification Penalty .....	76
<b>Table 3.4:</b> Comparison of methods in terms of Relative position based measure .....	77
<b>Table 3.5:</b> Comparisons of methods in terms of Normalized Cross Correlation.....	78
<b>Table 3.6:</b> Comparison of methods in terms of Peak Signal-to-Noise Ratio.....	79
<b>Table 3.7:</b> Comparison of methods in terms of Normalized absolute error.....	80
<b>Table 3.8:</b> Comparison of methods in terms of Pixel Classification Measure.....	81
<b>Table 3.9:</b> Computational Time and Consumption Memory for One step video .....	82
<b>Table 4.1:</b> Values of Relative foreground area measure.....	123
<b>Table 4.2:</b> Values of Misclassification Penalty.....	124
<b>Table 4.3:</b> Values of Relative position based measure .....	125
<b>Table 4.4:</b> Values of Normalized cross correlation .....	126
<b>Table 4.5:</b> Values of Peak Signal-to-Noise Ratio .....	127
<b>Table 4.6:</b> Values of Normalized absolute error.....	128
<b>Table 4.7:</b> Values of Pixel Classification Based Measure .....	129
<b>Table 4.8:</b> Shadow detection rate $\gamma$ for representative video sequences .....	130
<b>Table 4.9:</b> Shadow discrimination rate $\zeta$ for representative video sequences.....	130
<b>Table 4.10:</b> Computational Time and Consumption Memory for One step video sequence.....	130

<b>Table 4.11:</b> Description of Datasets Used for Experimentation.....	144
<b>Table 4.12:</b> Average Performance of different methods for all video frames of each dataset.....	150
<b>Table 4.13:</b> Computational Time and Consumption Memory for Venice-7 Video Sequence.....	151
<b>Table 5.1:</b> Confusion matrices for the proposed and other methods .....	171
<b>Table 5.2:</b> Recognition results over our own action recognition dataset .....	172
<b>Table 5.3:</b> Confusion matrix for the proposed method and other methods .....	175
<b>Table 5.4:</b> Recognition results over the KTH action recognition dataset .....	176
<b>Table 5.5:</b> Confusion matrix for the proposed method and other methods .....	179
<b>Table 5.6:</b> Recognition results over the i3DPost multi-view dataset .....	180
<b>Table 5.7:</b> Confusion matrix for the proposed method and other methods .....	183
<b>Table 5.8:</b> Recognition results over the MSR view-point action dataset .....	184
<b>Table 5.9:</b> Confusion matrices for the proposed and other methods .....	187
<b>Table 5.10:</b> Recognition results over the Video Web action recognition dataset .....	188
<b>Table 5.11:</b> Confusion matrix for the proposed method and other methods .....	190
<b>Table 5.12:</b> Recognition results over the WVU action recognition dataset .....	190
<b>Table 6.1:</b> Confusion matrices for the proposed and other methods .....	211
<b>Table 6.2:</b> Recognition results over our own activity recognition dataset .....	212
<b>Table 6.3:</b> Confusion matrices for the proposed and other methods.....	215
<b>Table 6.4:</b> Recognition results over VideoWeb action recognition dataset .....	216
<b>Table 6.5:</b> Confusion matrix for the proposed method and other methods .....	219
<b>Table 6.6:</b> Recognition results over the i3DPost multi-view dataset .....	220

<b>Table 6.7:</b> Confusion matrix for the proposed method and other methods .....	223
<b>Table 6.8:</b> Recognition results over the WVU action recognition dataset.....	224
<b>Table 6.9:</b> Confusion matrix for the proposed method and other methods .....	227
<b>Table 6.10:</b> Recognition results over the MSR view-point action dataset.....	228
<b>Table 6.11:</b> Confusion matrix for the proposed method and Iosifidis .....	230
<b>Table 6.12:</b> Recognition results over the i3DPost dataset .....	230
<b>Table 6.13:</b> Computational Time and Consumption Memory for MSR view-point action dataset .....	231
